

AD URBAN-DESIGN BOARDS

JINGZHANG KEEP APART

When the machine is uncertain, keep two human-service paths open.

KEEP APART

Provisional rough boundary / low confidence / non-official; recompute all locations, areas, and ratios when official polygons arrive.

BOARD 01 | Structure and spatial evidence

BOARD 02 | Taskbook and public-space components

AGENT.1 Concept and identity system Dual-rail identity; three positions, five functions, three areas and two wings.	AGENT.2 Trustworthy AI ecosystem and case transfer Five official public-governance cases used as background method lenses, not local formal evidence.	AGENT.3 Three industry validations and ten scenario cards Shared contact, downstream propagation, and vendor exit; named human decisions and failure gates.
AGENT.4 Public-space landmarks and components Two-Track Threshold, Separation Signal Pavilion, Receipt Beacon; six movable components.	AGENT.5 Railway-switch cultural narrative Railway switching represents reversible choice; Zhongguancun open contribution represents auditable collaboration.	AGENT.6 Annual operation and exit Quarterly tests, twice-yearly walkthroughs, annual forum, and continuous contribution display; all pausable, revocable, and transferable.
L-01 • TEST Two-Track Threshold Two non-joining tactile rails explain default separation; no person recognition.	L-02 • COMPOSE Separation Signal Pavilion Displays only four neutral states: local service, human review, HOLD, closed.	L-03 • DELIVER Receipt Beacon Shows only de-identified closed/open counts, never names or matters.
C-01 • Dual-rail wayfinding strip	C-02 • Movable privacy screen	C-03 • Paper provenance-card slot
C-04 • Human-service available flag	C-05 • HOLD/RETURN magnetic tag	C-06 • De-identified receipt counter
Provisional rough boundary / low confidence / non-official; recompute all locations, areas, and ratios when official polygons arrive.		

BOARD 03 | Case-test-scenario evidence

CASE-CA-AIA Canada Directive on Automated Decision-Making and Algorithmic Impact Assessment Treasury Board of Canada Secretariat Translate impact tiers, human intervention, and public explanation into pre-launch gates; not proof of local compliance. BACKGROUND ONLY	CASE-UK-ATRS UK Algorithmic Transparency Recording Standard UK Government Record purpose, owner, data, and risks in a readable form; never replace source accountability. BACKGROUND ONLY	CASE-NL-REGISTER Netherlands Algorithm Register Government of the Netherlands Borrow public discoverability and authority fields; never publish personal correction trails. BACKGROUND ONLY	CASE-HEL-AI City of Helsinki AI Register City of Helsinki Borrow service-level explanations and public feedback entry points; do not claim equivalent city conditions. BACKGROUND ONLY	CASE-EU-AI European Commission AI regulatory framework overview European Commission Use risk tiers to flag stronger review for high-impact services; not case-specific legal advice. BACKGROUND ONLY	
Test / role	Synthetic input	Named human decision	Public result after failure		
T-01 TEST	Shared-contact collision test Synthetic same-name, birthday, household-phone, and transliteration records	Privacy/records professional approves summary fields; each source owner checks only its side.	RETURN if the other person's data leaks, biometrics are added, or the link cannot be frozen.		
T-02 COMPOSE	Downstream adverse-action propagation test Synthetic appointment, missing-document, or risk flag propagated to four recipients	Matter owner decides item by item whether to withdraw, correct, or keep disputed.	No completion while a recipient remains open; basic service continues and the disputed matter stays HOLD.		
T-03 DELIVER	Offline-source and vendor-exit test One source offline, vendor service ended, and AI tool switched off	Public-service owner activates paper/telephone paths; data steward signs the exit handover.	Stop the pilot if ordinary service disappears for both people or no one accepts the open list.		
S-01 Raise separation request HOLD Carrier Ordinary front desk Human decision Person raises it; desk logs only the minimum request Minimum AI role Flag a possible conflict		S-02 Freeze disputed link RETURN Carrier Source-owner seat Human decision Data steward approves freezing new automated actions Minimum AI role List authorised propagation paths	S-03 Two-sided provenance HOLD Carrier Two source-owner seats Human decision Each owner checks only its source record Minimum AI role Draft an editable difference summary	S-04 Privacy-safe summary RETURN Carrier Camera-free separation room Human decision Privacy professional approves visible fields Minimum AI role Mask the other person's fields	S-05 Independent review HOLD Carrier Review desk Human decision Independent reviewer decides split or continued separation Minimum AI role Must not recommend final identity
S-06 Downstream receipts HOLD Carrier Receipt checkpoint Human decision Each matter owner closes its own item Minimum AI role Maintain an editable open list		S-07 Multilingual read-back RETURN Carrier Language-support seat Human decision Person confirms intent; language owner confirms translation Minimum AI role Draft translation for confirmation only	S-08 Accessible service HOLD Carrier Low counter and quiet waiting seat Human decision Accessibility professional confirms equivalent path Minimum AI role Offer optional aids without forcing digital entry	S-09 Vendor exit STOP Carrier Exit-handover point Human decision Data and public-service owners co-sign handover Minimum AI role Export open list, then stop	S-10 Synthetic public rehearsal RETURN Carrier Public explanation table Human decision Professional panel decides whether bounded demonstration continues Minimum AI role Demonstrate with synthetic records only
Provisional rough boundary / low confidence / non-official; recompute all locations, areas, and ratios when official polygons arrive.					

BOARD 04 | Operation–implementation–exit

Cadence	Concept activity	Proposed owner	Entry gate	Exit result
Quarterly	Synthetic case open-test day	Independent test lead + privacy/records professionals	Test pack, rights note, no real data	Withdraw case on leakage or biometric escalation
Twice yearly	Two-track public-service walkthrough	Public-service owner + accessibility representative	Human, paper, and telephone paths demonstrable	HOLD if any group lacks an equivalent path
Annual	Revocable AI City Protocol Forum	Proposed taskbook operations role + independent professional panel	Publish methods, synthetic results, and failure conditions only	Never present the event as a confirmed government programme
Continuous	Open contribution and honour display	Contributor consent + community maintainer	Display voluntarily credited methods/components, never personal service records	Remove credit after withdrawal while preserving version facts
G0 Task and rights inventory Owner: Public-service owner Evidence: Service list, source ownership, rights ledger HOLD_IF_OWNER_MISSING	G1 Synthetic tabletop test Owner: Independent test lead Evidence: Eight synthetic pairs and failure log RETURN_ON_LEAK_OR_BIOMETRICS	G2 Professional review Owner: Privacy, records, accessibility, fire, and information-security professionals Evidence: Itemised signed review checklist HOLD_UNTIL_ALL_CRITICAL_ITEMS_CLOSE	G3 Bounded public demonstration Owner: Venue and public-service owners Evidence: Capacity, waiting, language, and human-fallback receipts STOP_IF_ORDINARY_SERVICE_DEGRADES	G4 Exit and handover Owner: Data steward and public-service owner Evidence: Open list, deletion/retention basis, ordinary-service restoration NO_EXIT_WITH_ORPHANED_ITEMS
Provisional rough boundary / low confidence / non-official; recompute all locations, areas, and ratios when official polygons arrive.
