

Jingzhang Rights Handover | A3 Booklet

Personal choice, professional verification, and downstream receipts

RIGHTS HANDOVER / 权利主体转换

Return control when due · Hold new use when disputed

AI

List authorized records · flag missing links · draft plain-language options · check receipts

HUMANS

Support steward · authority verifier · content/rights reviewer · independent appeal reviewer

PUBLIC RESULT

Freeze new use · isolate contested retention · keep ordinary service · remove temporary fixtures

Conceptual workflow — not a legal or official decision

– This is a concept, not a decision on adulthood, capacity, representation, copyright, deletion, or implementation.

– All three scope levels use provisional rough polygons and require full recalculation.

01 | Three Levels and Three Key Areas

False-trigger prevention · Personal choice · Downstream reconciliation

- Zhongzhiyuan: synthetic false-trigger and derivative-trace tests
- AI Origin: camera-free desk and joint-work split
- Dazhongsi: account-free service, receipts, and closeout

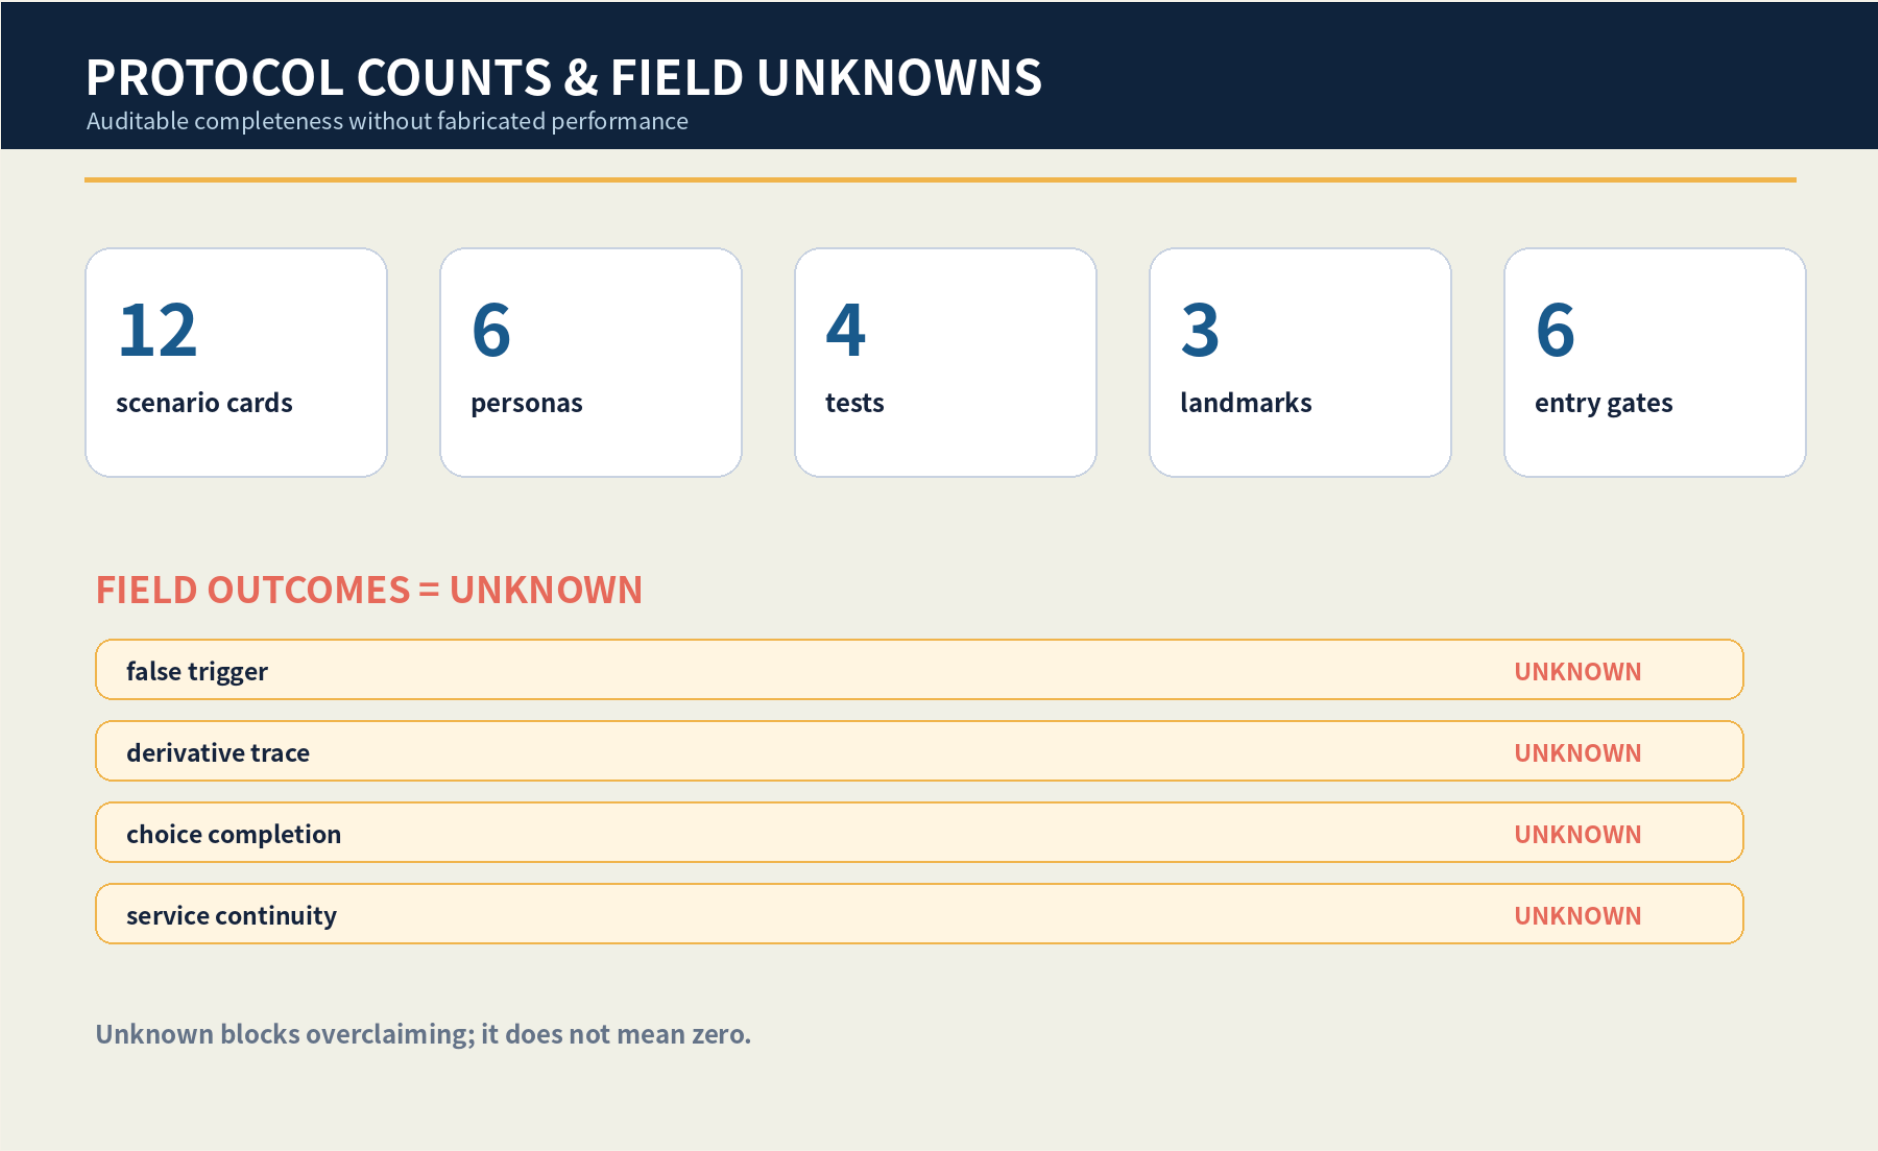

02 | 12 Cards and 6 Personas

Four industry/professional tests use synthetic data only

- S01 · Voice-guide return — The person reviews source, versions, and display scope; unresolved authority stays frozen
- S02 · Joint-work split — Joint credit and individual data are separated; only disputed branches are held
- S03 · Guardian disagreement — No related party may continue use alone; ordinary learning continues
- S04 · School-closure handover — The operator hands over inventory, owner, and contacts before exit
- S05 · Missing-vendor freeze — Unlocatable derivatives stop expansion and enter a gap register
- S06 · Display withdrawal — Withdrawal reaches signs, web, and event material without erasing required audit
- S07 · Training-use stop — Disputed samples and traceable derivatives are disabled; no claim of perfect model forgetting

03 | Phasing, Risk, and Professional Gates

Synthetic first, unoccupied prototype second, co-design third; no automatic field deployment

- All six gates precede any personal-choice rehearsal.
- Real data, automatic age/capacity inference, interrupted ordinary service, or an undisableable disputed derivative stops the prototype.
- The A3 booklet explains the full chain; A0 boards focus on spatial and decision hierarchy.
