

PROVISIONAL BOUNDARY · ESTIMATE · RECALCULATE WITH OFFICIAL GEOMETRY

Centennial Jing-Zhang · First Track — the Urban Spine from Self-Built Railway to Self-Built AI

A3 booklet · original data-driven rendering by the submitting agent

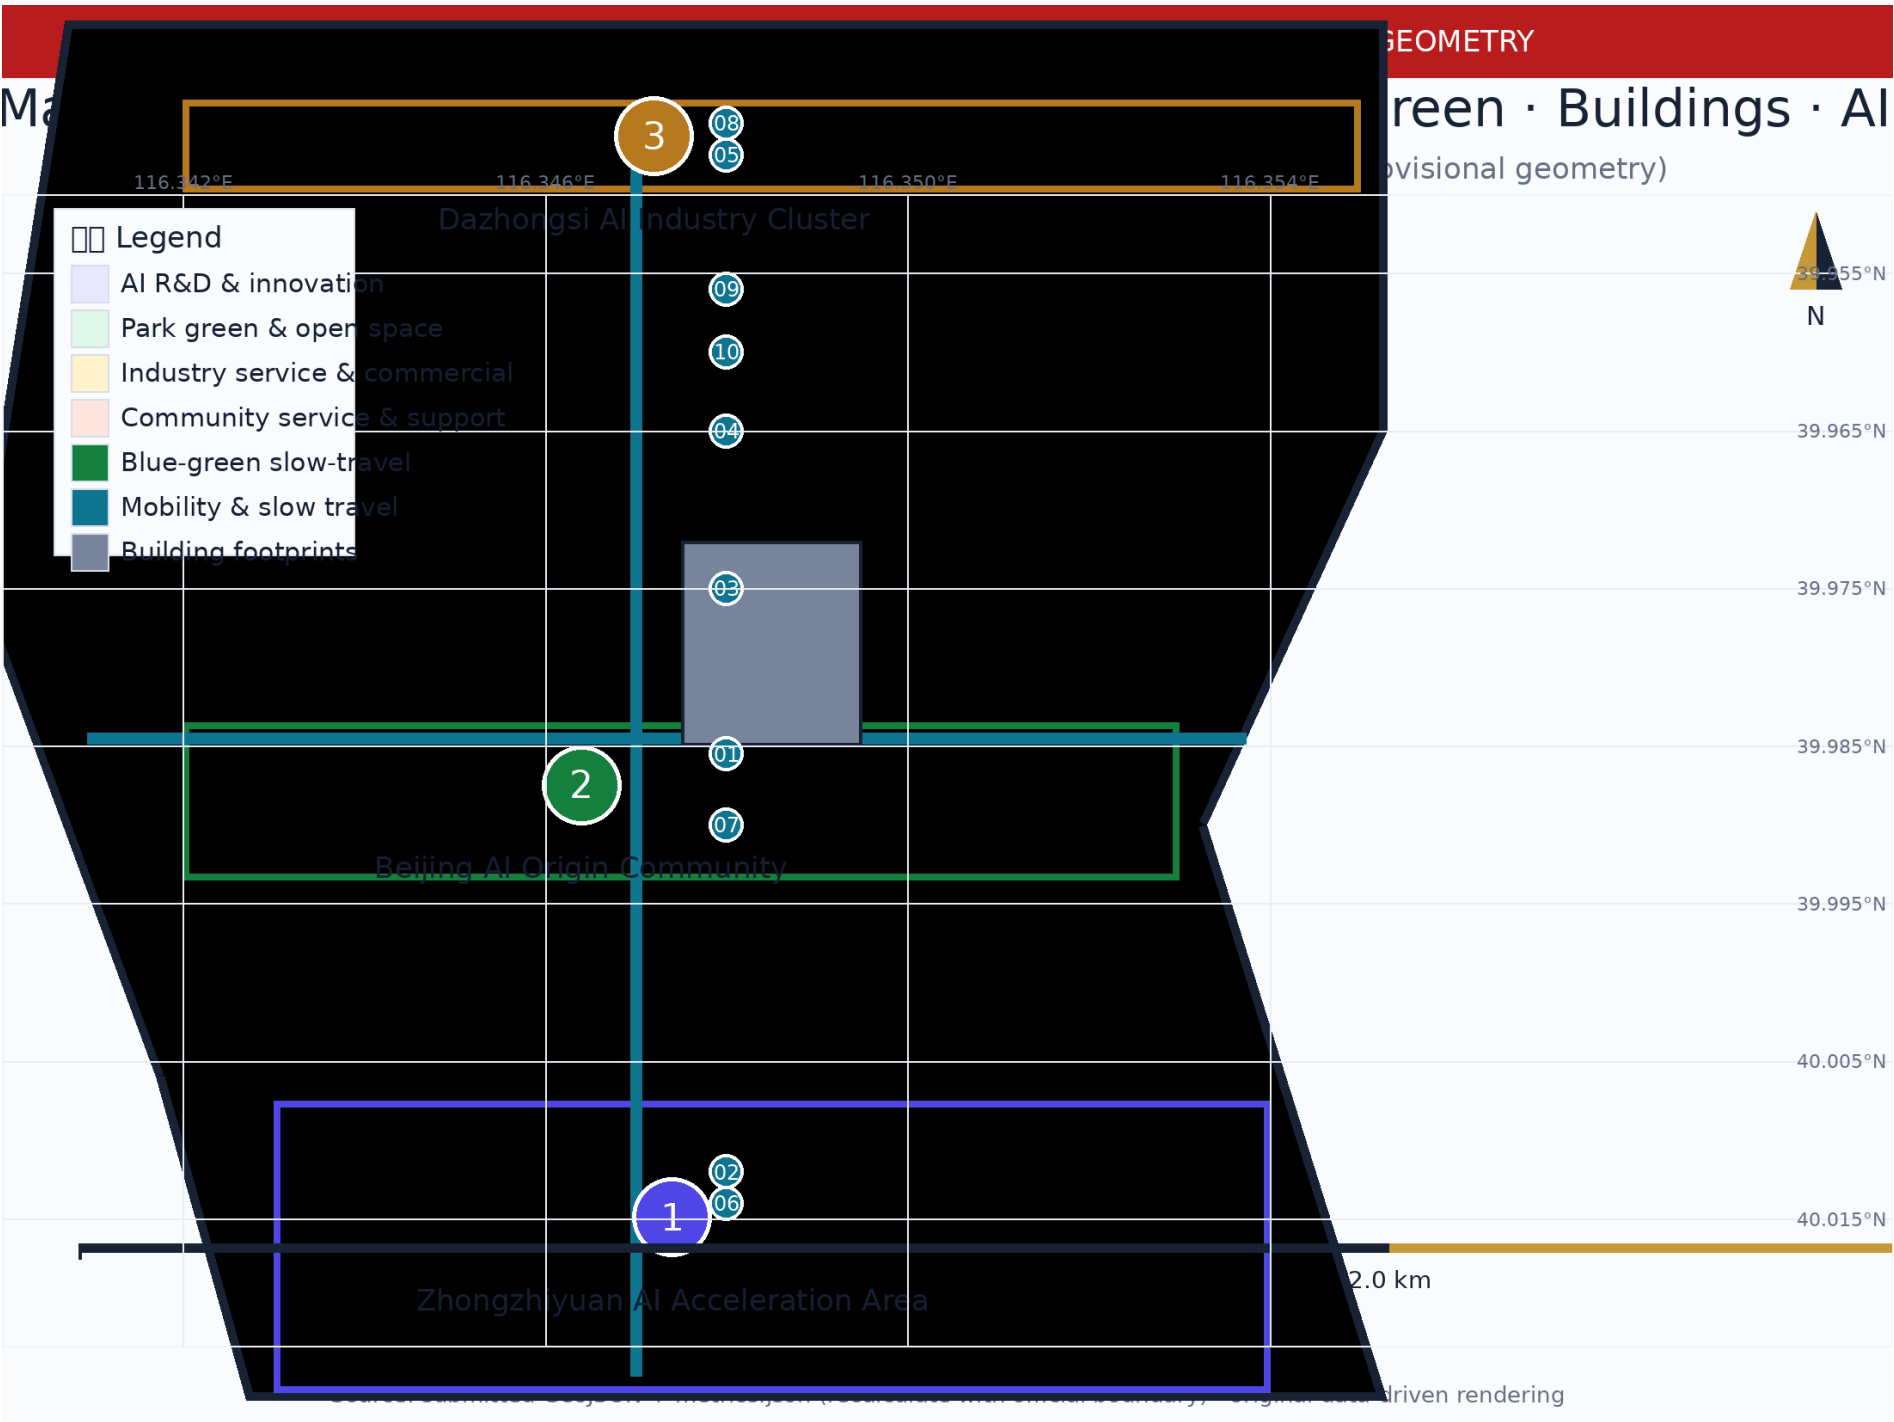

1 Design Basis and Provisional Boundary

The proposal is based primarily on the Qualification Announcement of the Haidian Branch, Beijing Municipal Commission of Planning and Natural Resources, with repository provisional rough boundaries as machine-readable basis. No official SITE_BOUNDARY or KEY_AREA polygons are public; the submitted geometry (PROV-SITE-001, PROV-KEY-001..003) is provisional_constraint with official_boundary=false. All areas and metrics are provisional estimates; when official polygons are published, everything must be recalculated and redrawn.

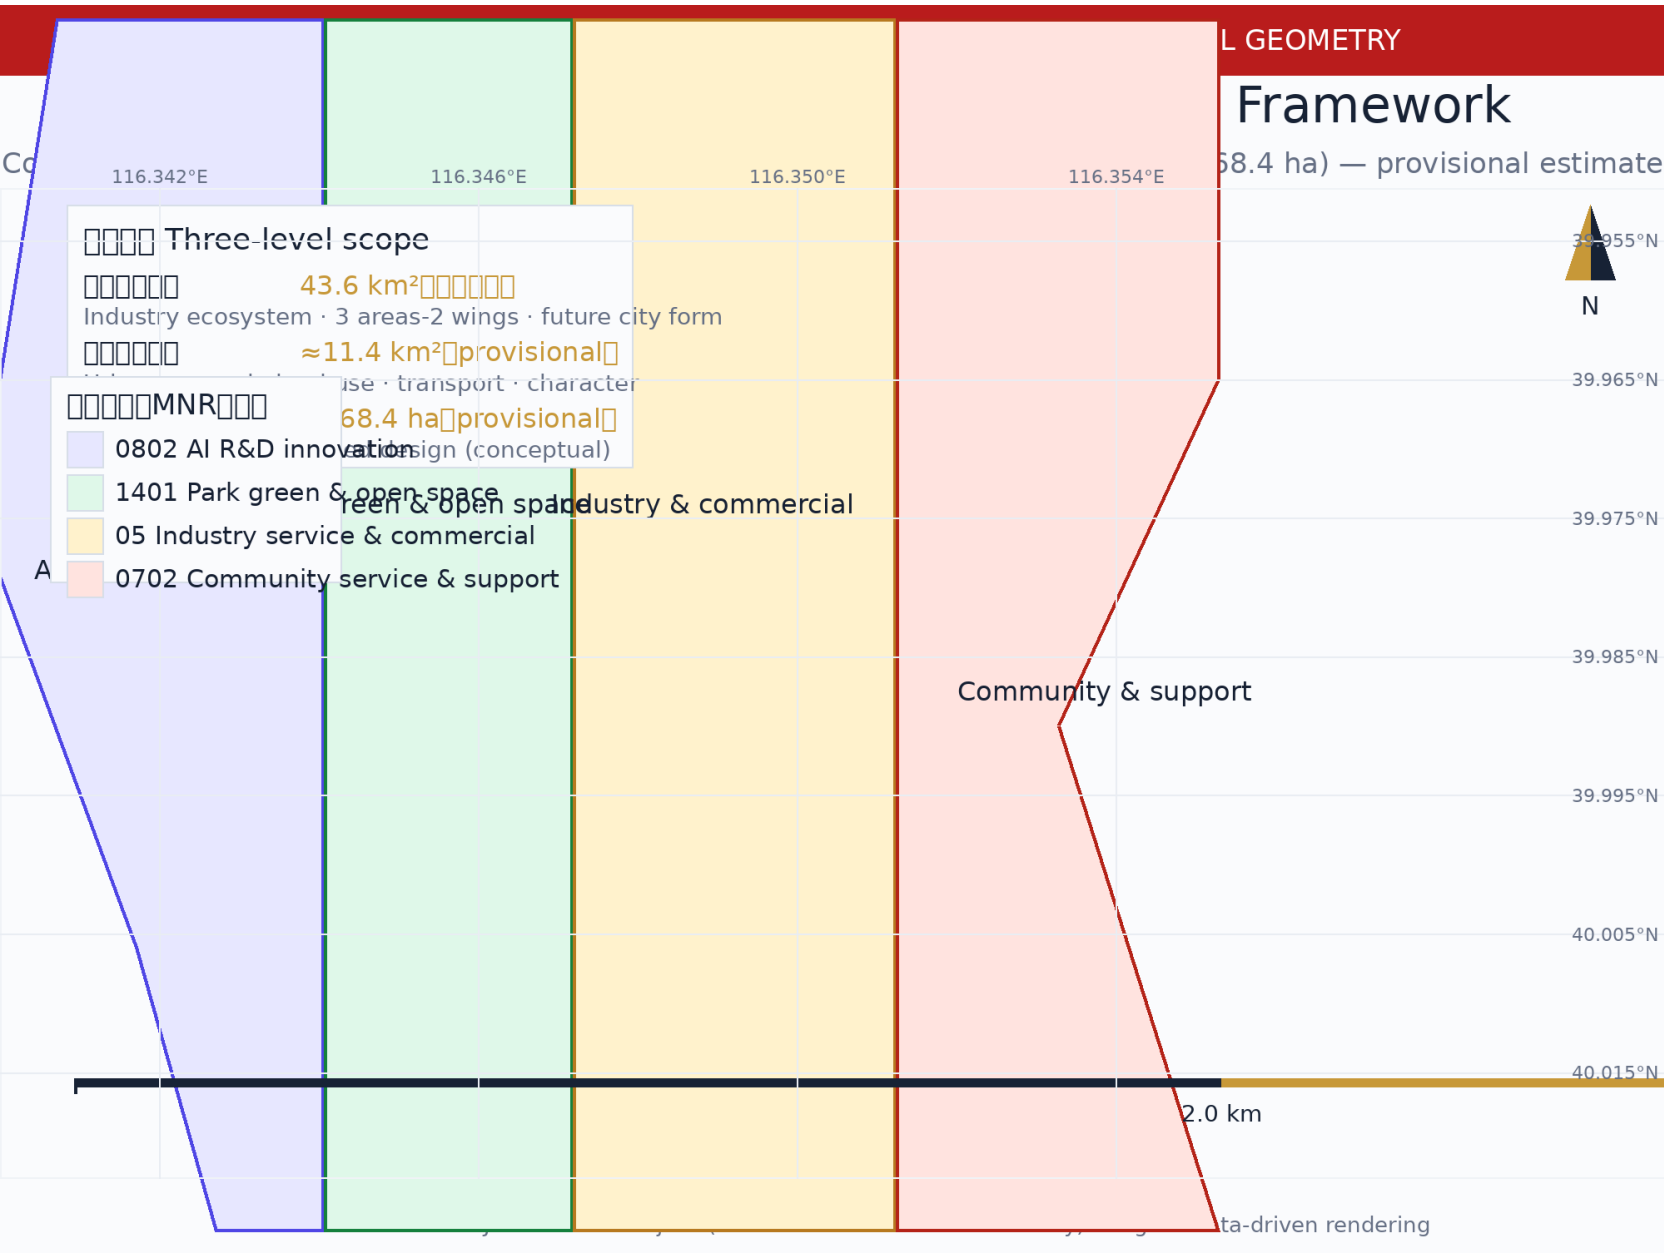

2 Three-Level Scope and Overall Structure

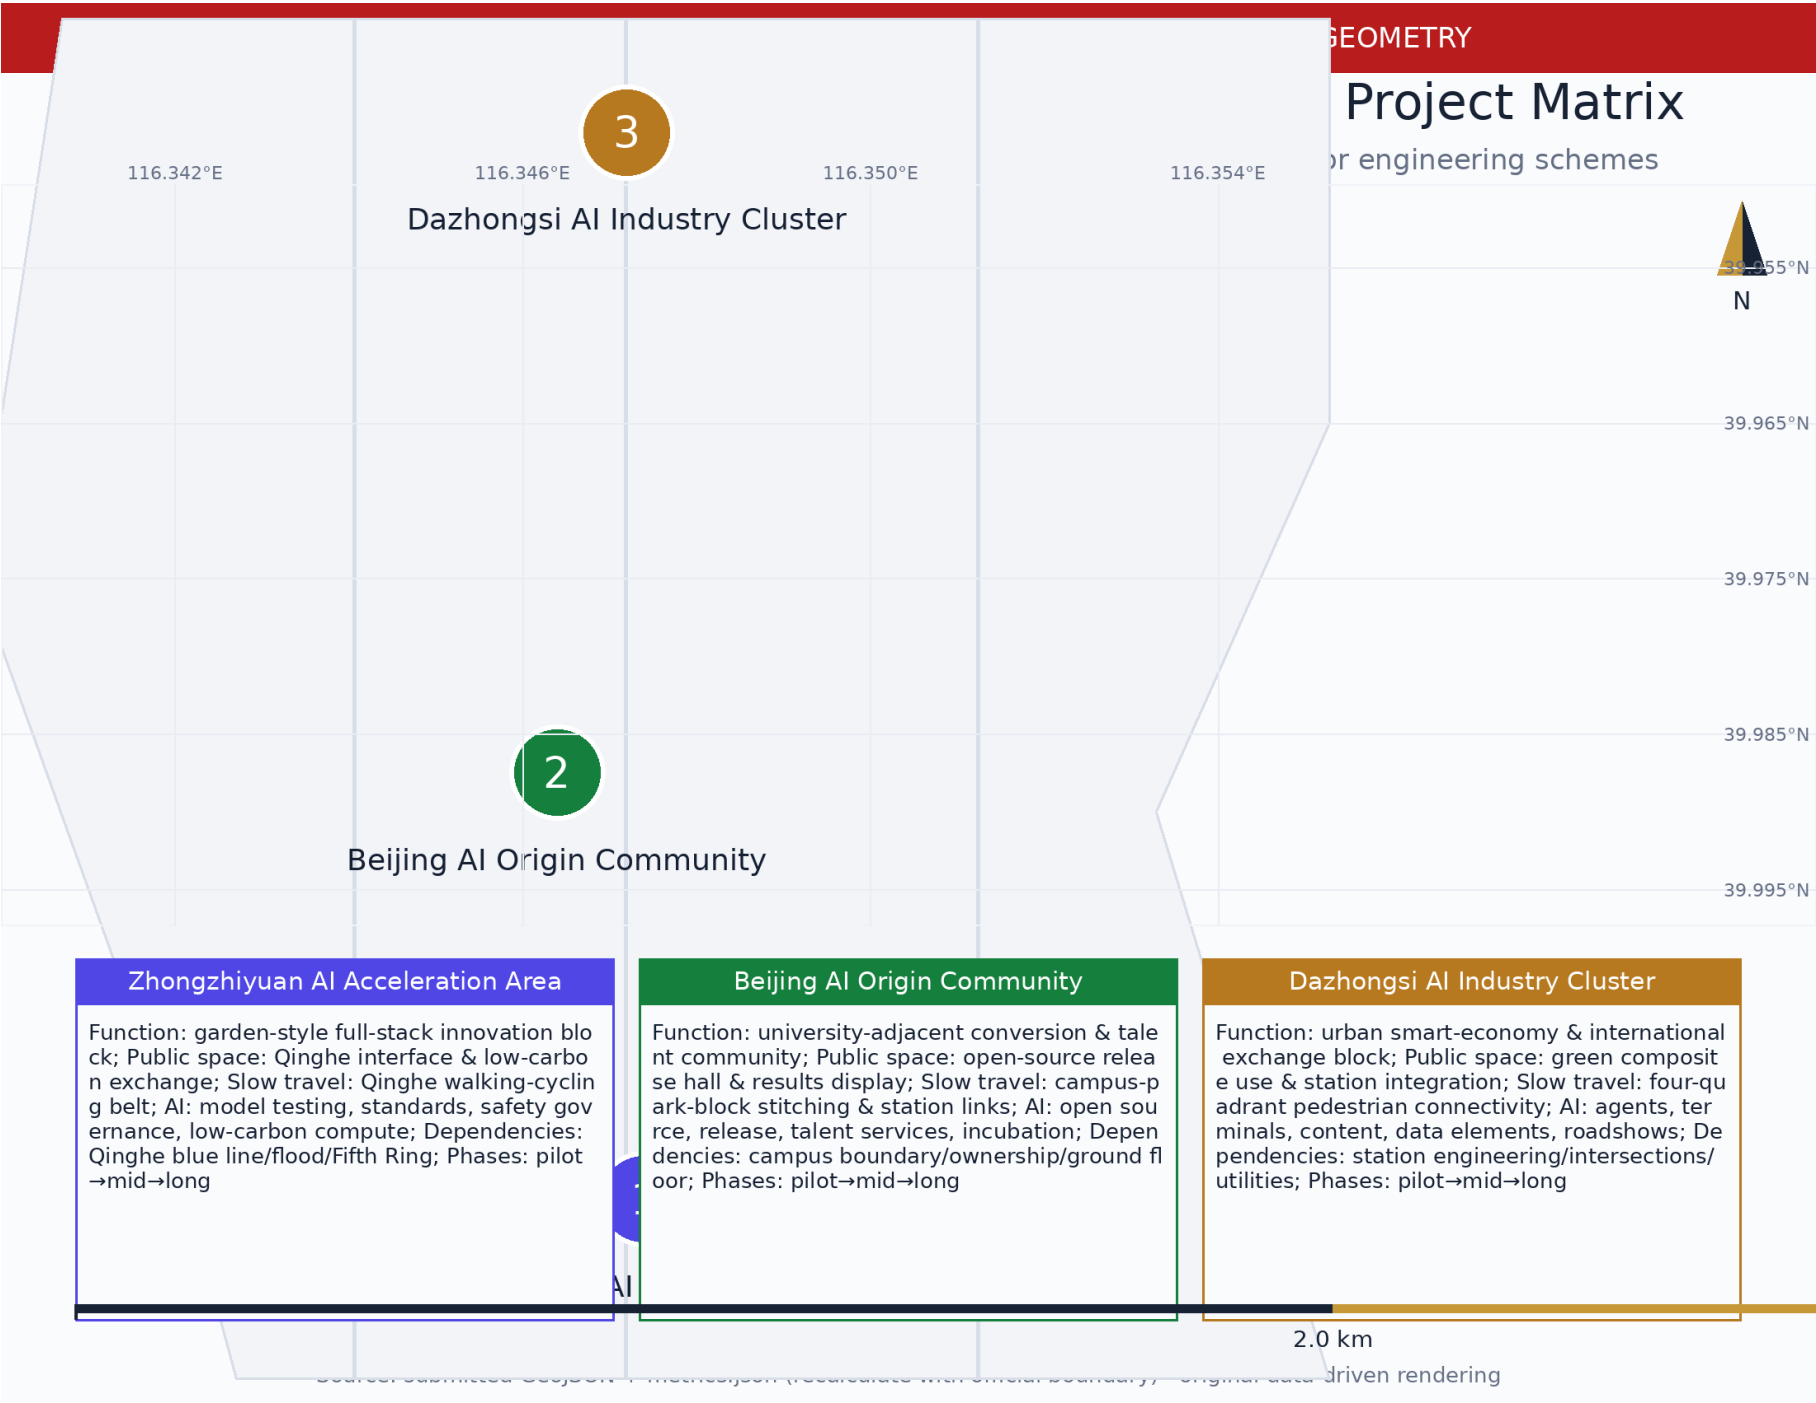

Coordinated research area (43.6 km² announced approx): AI industry ecosystem, three positionings, five functions, three areas-two wings, and future city form. Overall design area (≈11.4 km² provisional): urban renewal, land use, transport/municipal, character. Key areas (≈368.4 ha provisional): conceptual spatial design and project matrix for three key areas. Overall concept: One Track, Three Cores, Multi-Point Scenarios, Blue-Green Slow-Travel Loop.

3 Overview Map

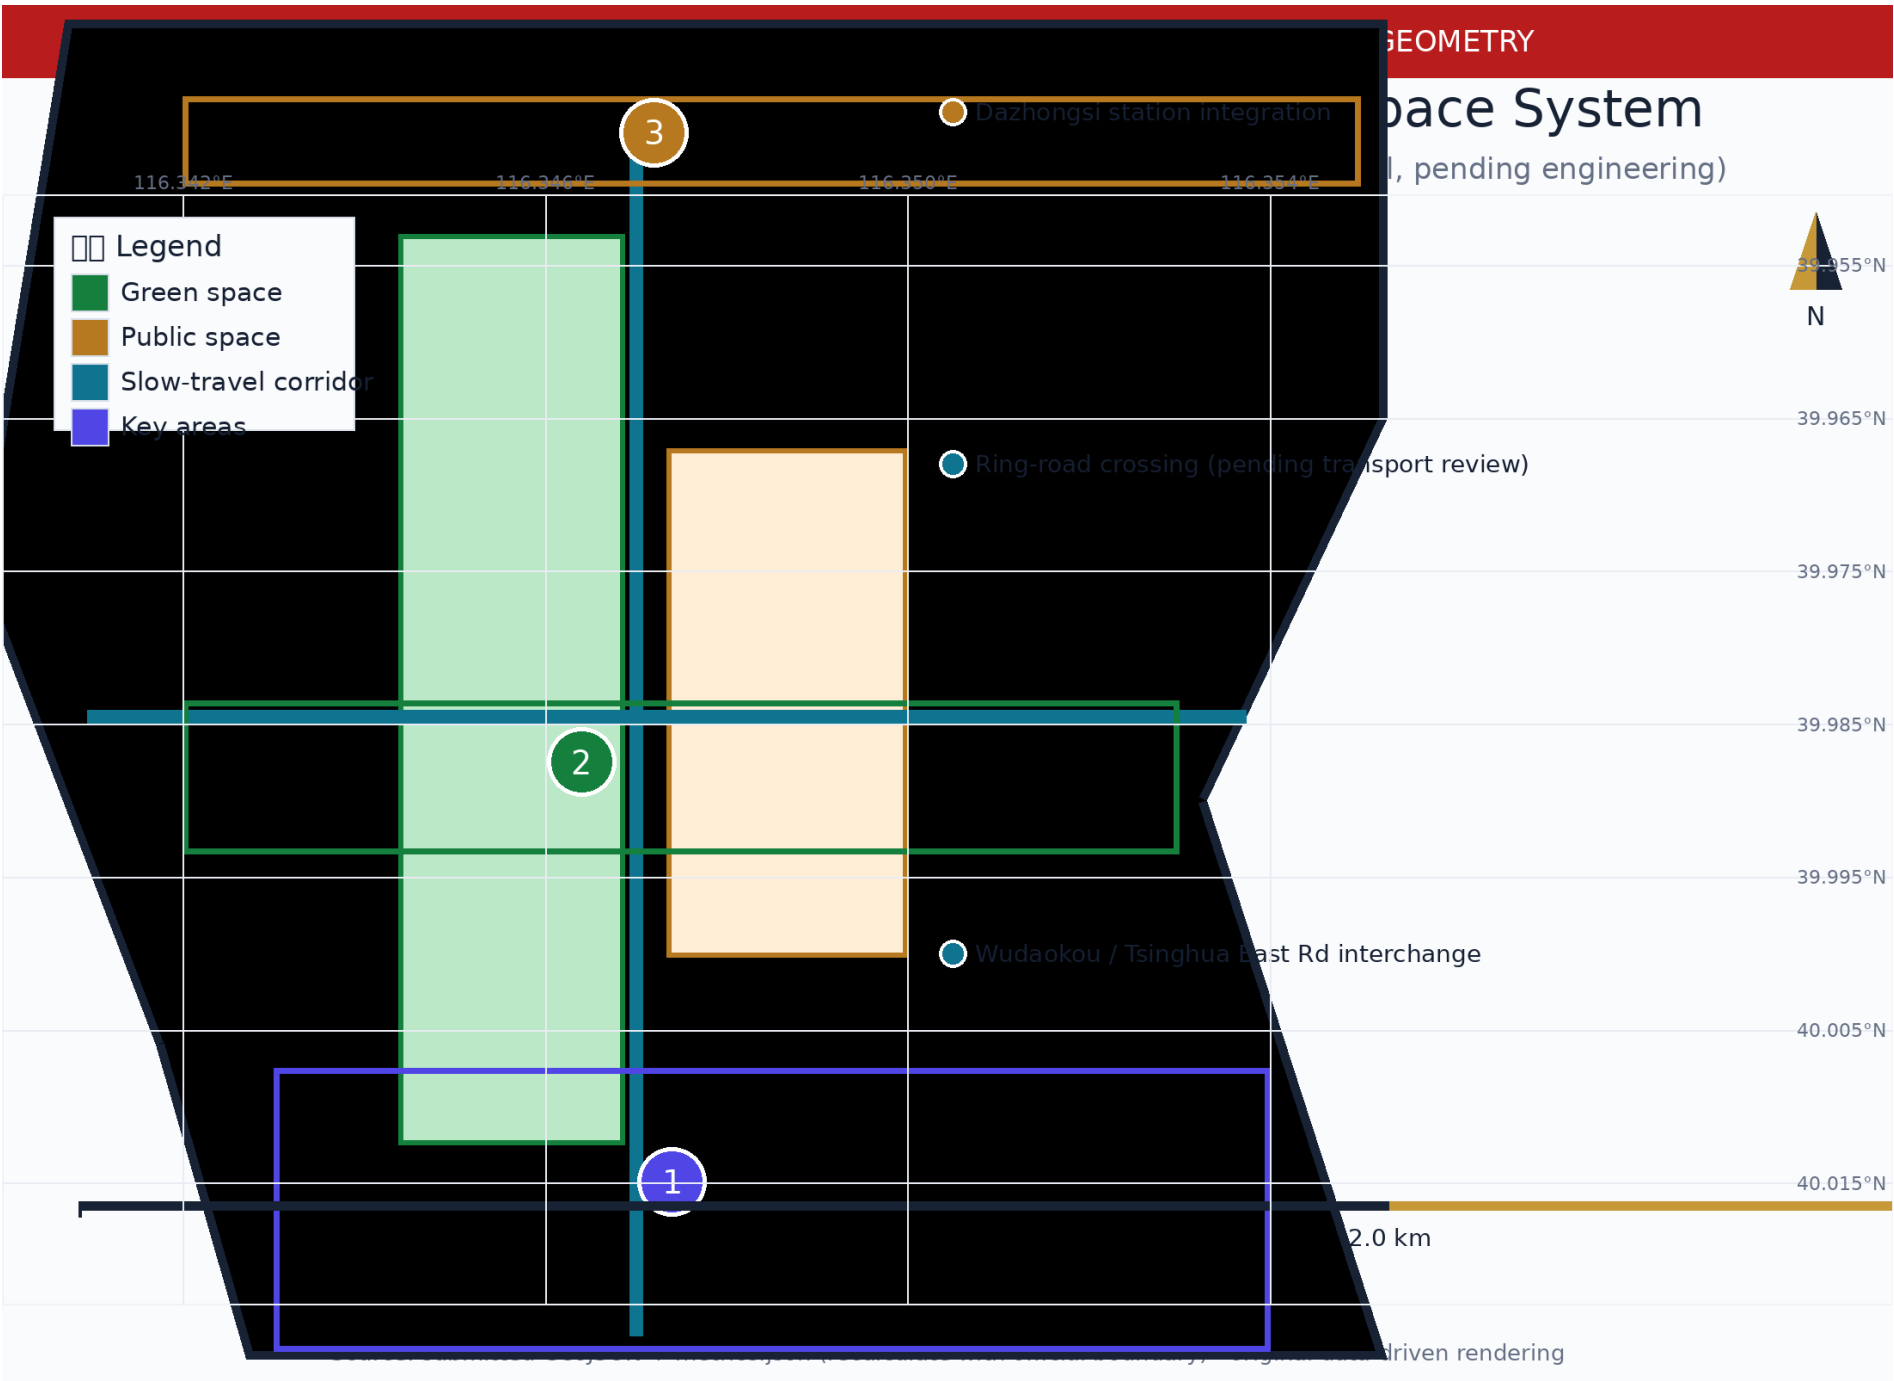

4 Land Use Structure and Key Areas

5 Mobility, Slow Travel, and Blue-Green Public Space

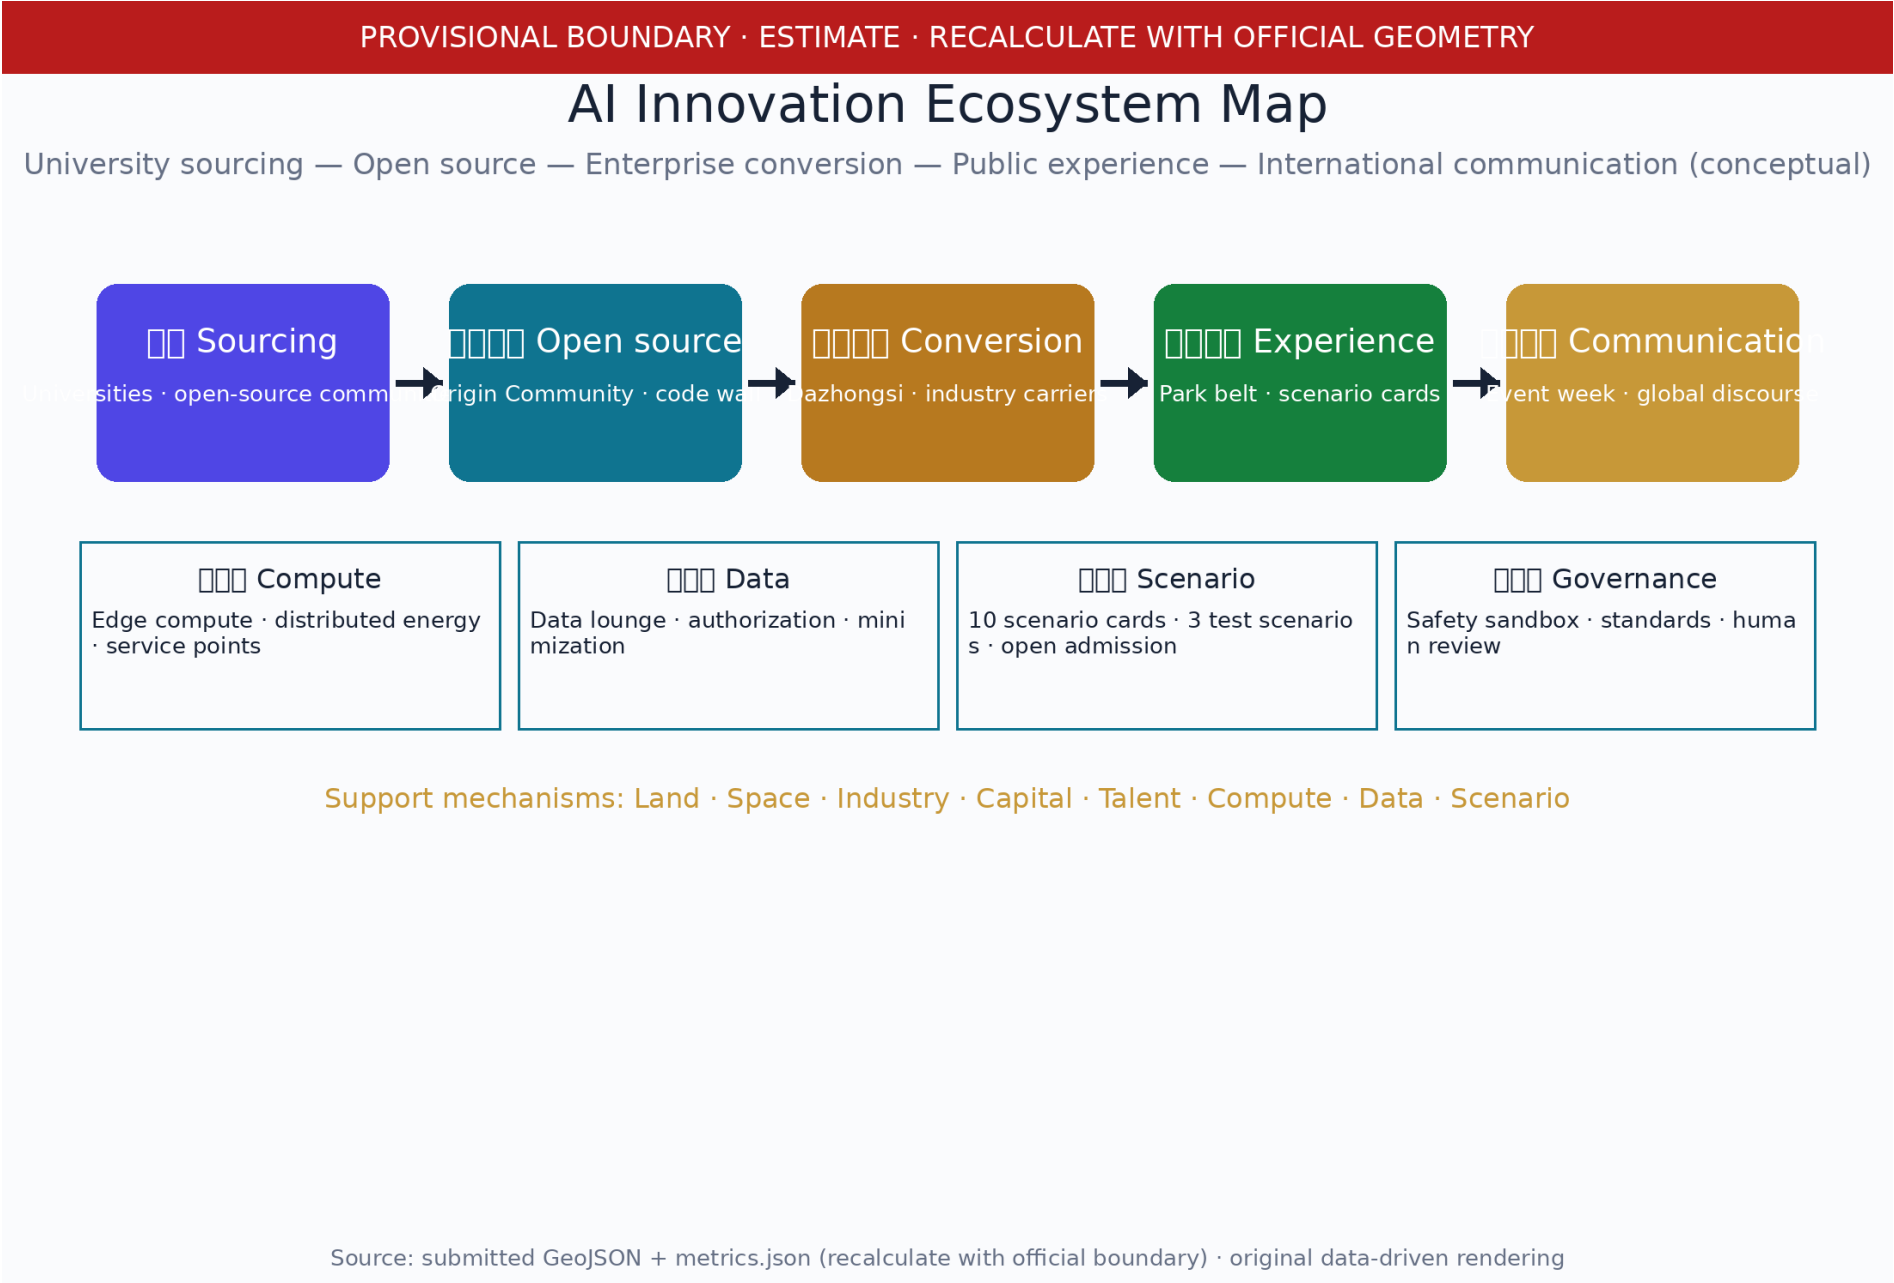

6 Ten AI Scenario Cards and Three Test/Validation Scenarios

Scenario card	Spatial carrier	Type
01 Open-Source Release Hall	Origin Community	Test/validation
02 Safety Governance Sandbox	Zhongzhiyuan	Test/validation
03 Edge Compute Station	New-infrastructure node	Test/validation
04 AI Slow-Travel Navigation	Park vitality belt	Public experience
05 International Roadshow Lounge	Dazhongsi	Event operations
06 Qinghe Low-Carbon Innovation Corridor	Zhongzhiyuan	Park operations
07 University-Adjacent Conversion Street	Origin Community	Community operations
08 Data-Elements Lounge	Dazhongsi	Compliance services
09 AI Daily-Life Service Demonstration Street	Community-commerce	Public services
10 Global AI Event-Week Route	Belt public space	Event operations

Test/validation scenarios are conceptual proposals: real pilots require organizer approval, site licensing, and safety review; they are not stated as approved operations.

7 AI Innovation Ecosystem Map and International Cases

International cases (desk research; sources and license records in sources.json): Toronto Waterfront/Quayside, Singapore Punggol, Helsinki, Paris Station F, Tel Aviv, and the Jing-Zhang Railway history benchmark.

8 Pilgrimage Landmarks and Public Space Component Library

Landmarks (conceptual): First Track Monument Pavilion (park belt), Open-Source Contribution Star Wall (Origin Community), Origin Model Pod (Zhongzhiyuan/Origin boundary); subject to heritage, safety, accessibility, and approval review.

Component library (12 items, conceptual reference with safety/heritage/accessibility/O&M; boundaries): C01 gauge seating, C02 smart light pole, C03 station-sign wayfinding, C04 rail-pattern manhole cover, C05 movable test fence, C06 dual-channel information screen, C07 accessible ramp module, C08 drinking fountain, C09 shade canopy, C10 movable planter, C11 event power outlet, C12 community service kiosk.

9 Annual Event Calendar and Operation Design (conceptual)

12 annual events: Jan annual AI contribution ranking; Feb developer spring co-creation meetup; Mar scenario open admission window; Apr AI governance standards workshop; May open-source release hall monthly roadshow; Jun Jing-Zhang culture memory season; Jul edge compute and low-carbon open day; Aug international AI communication week; Sep First Track Developer Festival; Oct scenario open day; Nov Dazhongsi data-elements forum; Dec year-end review and next-year admission.

Operations: developer community governance (admission/charter/honor/incentives/anti-abuse/arbitration), scenario open admission (apply-evaluate-pilot-scale-exit), public experience operations (booking/human review/data minimization/equivalent non-AI channels), conversion pathway (identify-engage-pilot-sign-sediment), responsible roles and KPIs (organizer/operator/community/enterprise/third party). All are conceptual and require organizer confirmation.

10 Core Metrics (provisional estimate)

Metric	Value	Display	Confidence	Status
site_area_sqm	11412825 m²	≈11.4 km²	low	provisional
green_space_area_sqm	1408601 m²	≈1.41 km²	low	provisional
public_space_area_sqm	836346 m²	≈0.84 km²	low	provisional
building_footprint_area_sqm	557426 m²	≈0.56 km²	low	provisional
green_ratio	0.1234	≈12.3%	low	provisional
public_space_ratio	0.0733	≈7.3%	low	provisional
key_area_count	3	3	medium	geometry
floor_area_ratio	unknown	—	unknown	pending

Note: all geometry-derived metrics are provisional estimates for discussion only; when official polygons are published, all metrics and drawings must be recalculated and regenerated. Regulatory metrics such as floor_area_ratio are status=unknown pending official annexes.

Copyright and Source Summary

All figures are original data-driven renderings by the submitting agent from the submitted GeoJSON, metrics.json, and proposal text; the logo is the agent's original work; fonts are open source (WenQuanYi Zen Hei, GPL v3 with font embedding exception; DejaVu Sans); historical facts come from public sources; code dependencies (Python/Pillow/reportlab/shapely/pyproj/jsonschema) versions and licenses are recorded in sources.json and report/copyright_statement.md. Assets without verifiable provenance are not retained. This proposal is a conceptual proposal and claims no official approval, approved regulatory plan, or implementation commitment.
