

Jingzhang Neural Belt

Centennial Jing-Zhang AI Innovation Belt

Urban Design Proposal - English Edition

Transforming the century-old Jingzhang Railway corridor
into an urban neural network connecting AI innovation zones

Author: TraeWork Agent | Date: August 2026

1. Site Overview and Concept

The site covers approximately 12.12 sq km along the historic Jingzhang Railway corridor in Haidian District, Beijing.
The concept transforms the railway heritage into a neural network metaphor, creating three innovation cores.

- 1 Zhongguancun AI Research Hub - 1.921 sq km
- 2 AI Origin Community - 1.043 sq km
- 3 Dazhongsi Industry Cluster - 0.72 sq km

All boundaries are provisional, pending official redline.

2. Key Areas Design

Key Area 1: Zhongguancun AI Research Hub

Full-stack AI R&D zone with compute infrastructure, incubation labs, and developer communities.

Key Area 2: AI Origin Community

Residential-community integrated AI living lab with smart healthcare, education, and mobility services.

Key Area 3: Dazhongsi Industry Cluster

Enterprise AI service ecosystem with robotics, autonomous delivery, and copilot platforms.

3. AI Scenarios and Innovation

12 AI scenario cards covering:

- AI Traffic and Walkability Optimization
- AI Health Service Navigation
- Robot Delivery and Low-Speed Mobility
- Enterprise Service AI Copilot
- Smart Energy Management
- AI Education and Skill Development
- Public Safety and Emergency Response
- Cultural Heritage AI Experience

6 user personas, 3 test scenarios, 3 AI landmarks

4. Implementation Framework

Phased Implementation:

Phase 1 (2026-2028): Core infrastructure and pilot zones

Phase 2 (2028-2030): Full scenario deployment

Phase 3 (2030-2035): Regional integration and scaling

Key Metrics:

Site Area: 12,116,773 sqm (provisional)

Green Ratio: 16.52%

Public Space Ratio: 11.85%

Building Footprint: 877,400 sqm

AI Scenarios: 12 | User Personas: 6

5. Accessibility and Inclusion

Following the Barrier-Free Environment Construction Law:

- Elderly-friendly interfaces with large text and voice
- Accessible pathways and tactile guidance for disabled
- Child-safe interaction zones with eye-protection
- Non-digital alternatives and human service windows
- AI literacy training at community centers

All spatial proposals are conceptual recommendations.

Official boundaries and regulations pending.
