

Jingzhang Maintenance Commons

One maintenance spine · three service yards · two support wings · twelve reversible scenarios

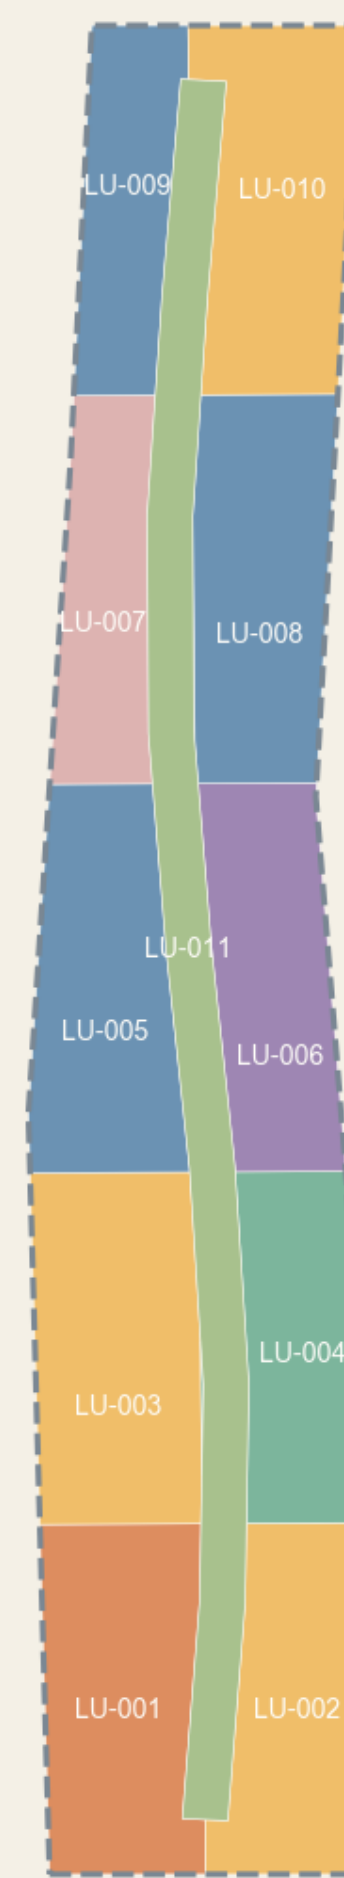

Not smarter failure — a more repairable city

Dashed line: provisional rough work boundary. Recalculate all placement after official data.

A recalculable maintenance chain, not a statutory plan

Official land-use codes cover the provisional envelope; redraw as a whole after statutory controls

- 科研 / R&D
- 文化 / Culture
- 教育 / Education
- 服务 / Services
- 居住 / Living
- 社区服务 / Community
- 绿地 / Green

Coverage 100% · overlap 0 sqm

This verifies internal topology only, not existing or approved land use.

Maintenance is not a backstage cost. It is shared infrastructure for innovation, public service and urban renewal. One green service spine links three yards through a reversible sense–diagnose–co-repair–verify–archive chain.

01 PROVISIONAL
composition and internal checks only

02 PROFESSIONAL GATES
planning, ownership, engineering, ecology and finance

03 HUMAN TAKEOVER
stop, rollback and restore

Three service yards: reliability to everyday repair

Each key area is tested through role, space, users, operation and exit gate

01 ZHONGZHIYUAN

Reliability Yard

industrial validation · controlled tests · operations talent

EXIT GATE

stop on failure, boundary breach or absent human takeover

02 AI ORIGIN

Open Repair Academy

open tools · accessibility adaptation · skill transfer

EXIT GATE

return if unauthorised, opaque or irreversible

03 DAZHONGSI

Civic Maintenance Market

public reporting · parts sharing · small repair services

EXIT GATE

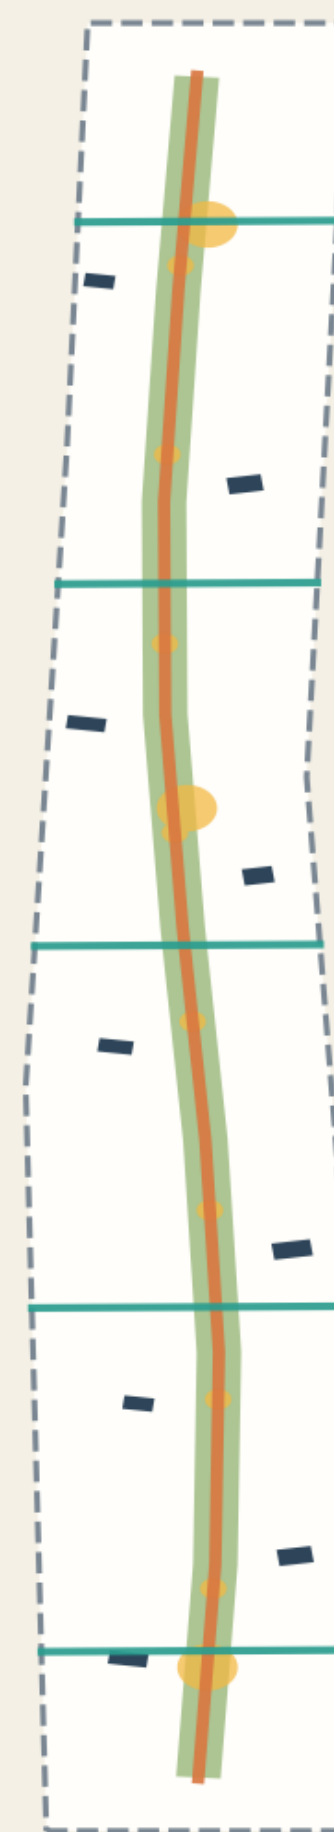

withdraw on nuisance, blocked access or absent maintenance

All three polygons are provisional_rough; areas only check this package and do not define parcels.

JINGZHANG MAINTENANCE COMMONS

Separate rights for slow mobility, blue-green space and service logistics

Everyday access and ecology first; tests, loading and sensing stay minimal, timed and reversible

- 01 People move first
tests, robots and loading never sever an accessible bypass
- 02 Ecology lives first
shade, runoff and habitat precede demonstrations
- 03 Collect less
no face, voice, emotion or personal movement tracking by default
- 04 Design for exit
every micro-station has a term, owner, service cycle and restoration rule

Zhongzhiyuan validates reliability, AI Origin transfers repair skills and Dazhongsi brings repair and circular services into everyday life. Four industry trials remain controlled, supervised and reversible.

Recalculate first; promise only after evidence

Spatial metrics use EPSG:4548; operating metrics need formulas, owners and pilot baselines

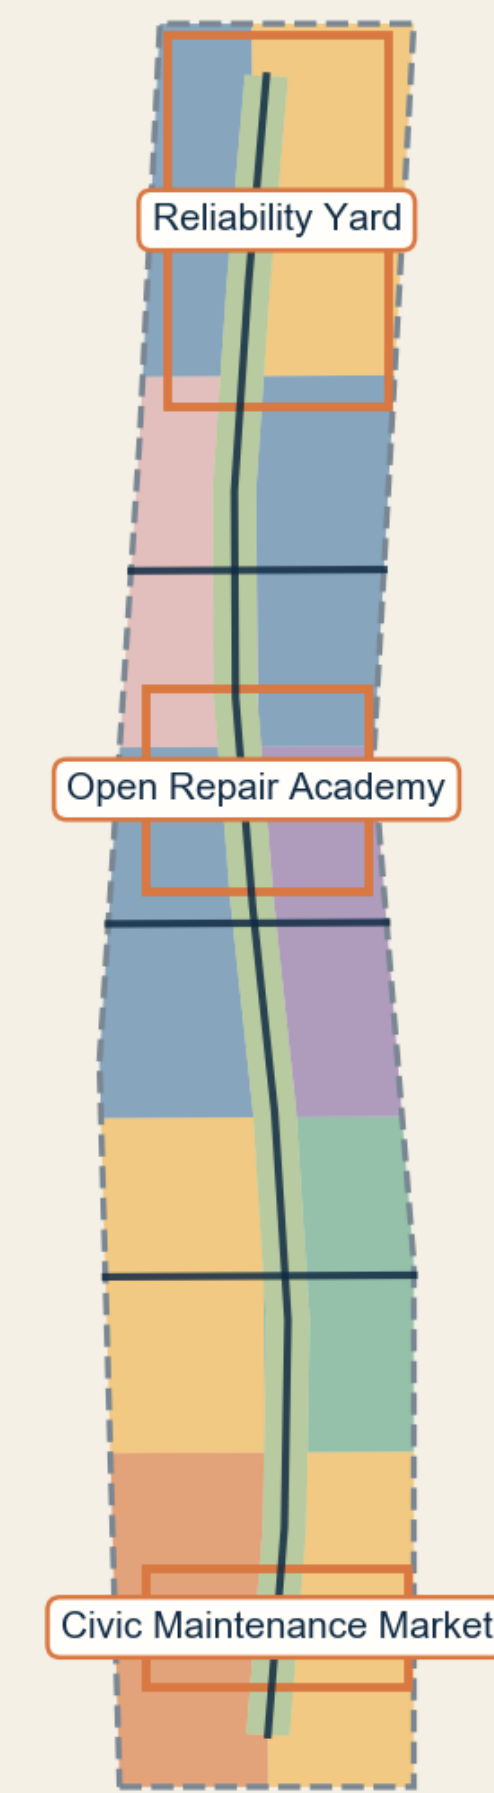

KNOWN → GEOMETRY → FORMULA → METRIC → CLAIM

Pending: official polygons, controls, surveyed assets/ownership, mobility, utilities, heritage/ecology and operating baseline

JINGZHANG MAINTENANCE COMMONS

Jingzhang Maintenance Commons

One maintenance spine · three service yards · two support wings · twelve reversible scenarios

Not smarter failure — a more repairable city

Dashed line: provisional rough work boundary. Recalculate all placement after official data.

Start with ledgers, protocols and reversible micro-stations; expand through pilot evidence; admit capital facilities only after planning, ownership, structure, fire, utilities, ecology, heritage and finance gates.
