

V14 / ENGLISH A3 BOOKLET

Jingzhang Commons

An Urban Innovation Commons on a Century-Old Railway

A public threshold before AI enters the city

The corridor becomes a Civic Verification Platform rather than an AI display belt.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

A century-old railway becomes a Civic Verification Platform

The project is a public institution for deciding how AI enters everyday urban life—not an AI showcase.

WHY HERE

Engineering memory + daily life

Railway heritage, universities, enterprises and nearly seventy communities share one observable corridor.

CORE IDEA

Five bands of public rights

Continuous passage, care, staffed service, heritage and visible ecological maintenance.

THREE PLATFORMS

Test / translate / decide

Zhongzhiyuan, AI Origin and Dazhongsi play distinct roles under one protocol.

TWELVE SERVICES

Small pins, not new icons

Services attach to stations, ground floors, campus gates, neighbourhood rooms and landscape nodes.

100 DAYS

Evidence before permanence

Baseline, reversible trial, public review, continue/change/stop decision.

PUBLIC VALUE

Rights before growth

Non-digital access, human review, anti-displacement and an accountable operator.

ONE SENTENCE / A public threshold that every urban AI service must pass before it becomes permanent.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Site evidence changes the design

Railway engineering memory, dense knowledge institutions, enterprise translation and ordinary life overlap here.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Site evidence atlas: each verified fact changes a design action

Facts are used to redirect design effort, not to decorate the narrative.

01 BUILT

Park section already open

Do not redraw the park; repair the urban interfaces on both sides.

02 PEOPLE

Residents + institutions

Treat daily users and care needs as core program, not event footfall.

03 IN PROGRESS

Later sections advancing

Embed services in current projects where agreements and safety allow.

04 FRICTION

Walking + cycling breaks

Prioritize station–park–campus thresholds before iconic construction.

05 INDUSTRY

Three distinct clusters

Assign testing, translation and public-decision roles instead of repeating one model.

06 ENGINEERING

Rail + road constraints

Keep major crossings conceptual until dedicated studies are complete.

EVIDENCE RULE / If a fact does not change a design decision, it does not belong in the main narrative.

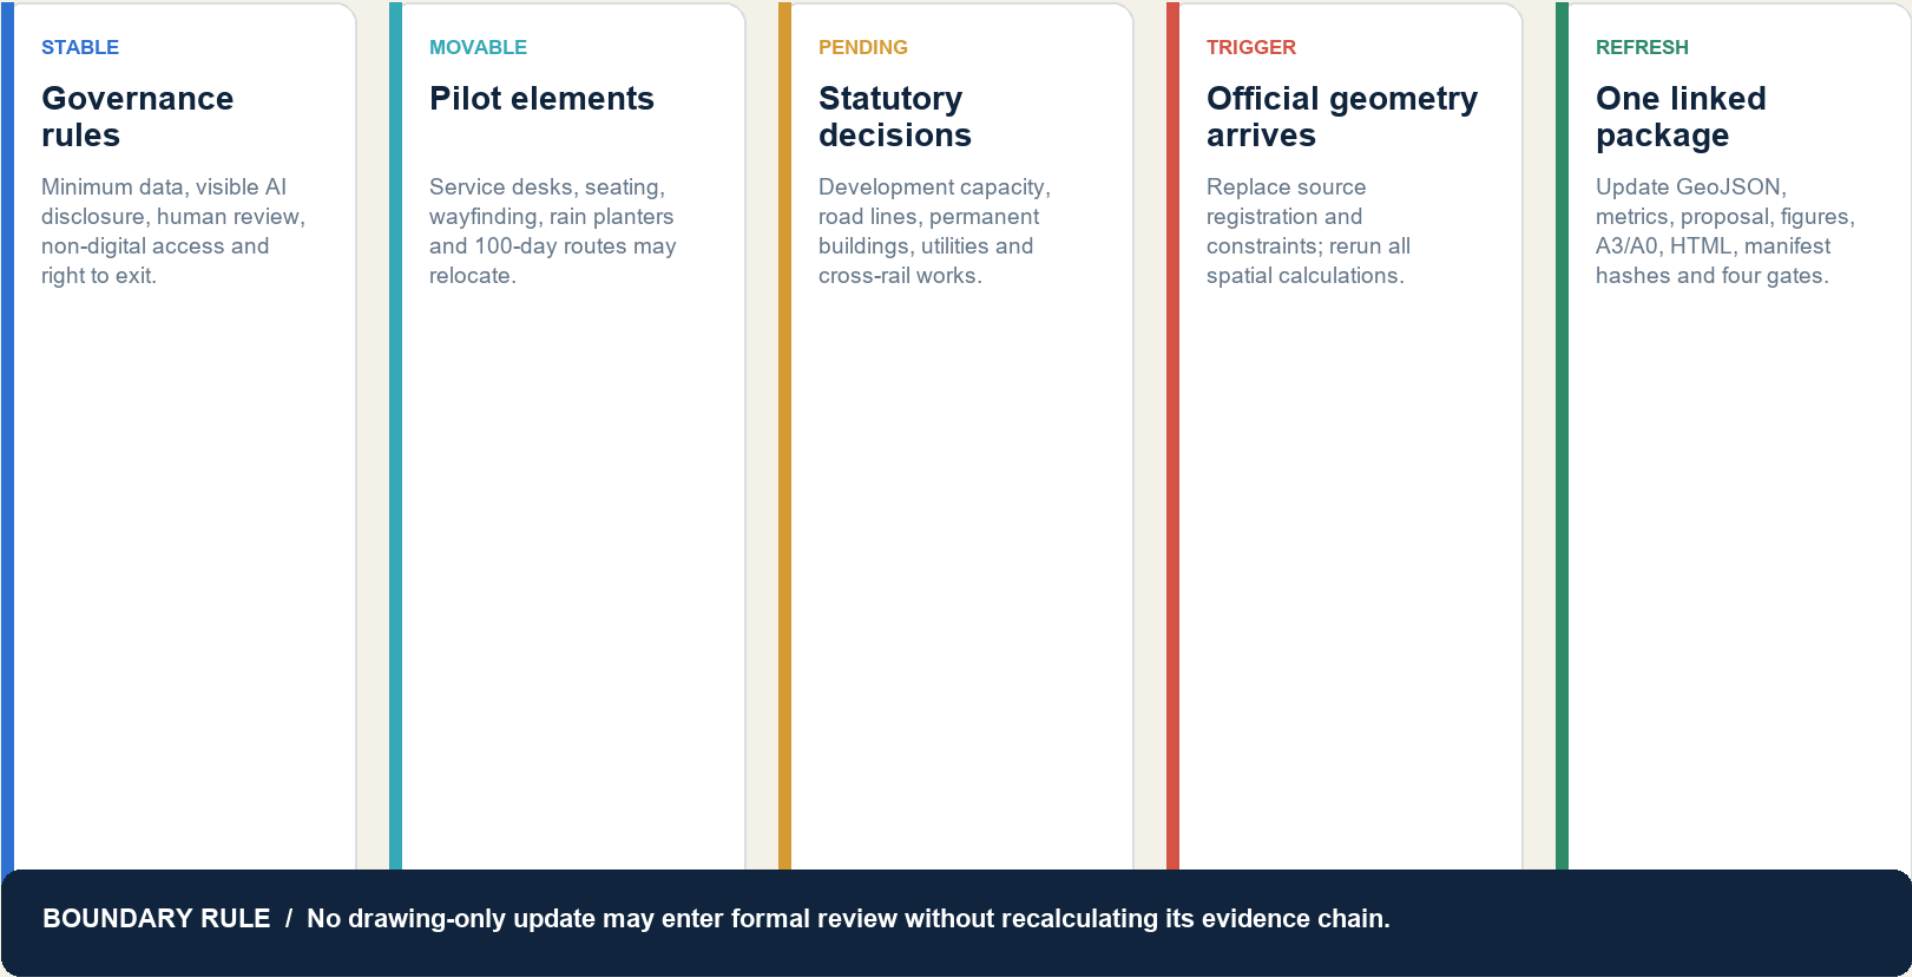

Conceptual design / provisional geometry / not an official plan or implementation commitment

Uncertainty is a design variable

Provisional geometry supports discussion and recalculation, but never substitutes for official redlines or surveyed conditions.

Provisional geometry is managed as uncertainty, not presented as precision

Official polygons will trigger a full refresh of geometry, metrics, figures, HTML and review gates.

Conceptual design / provisional geometry / not an official plan or implementation commitment

One spine, three loops, twelve pins

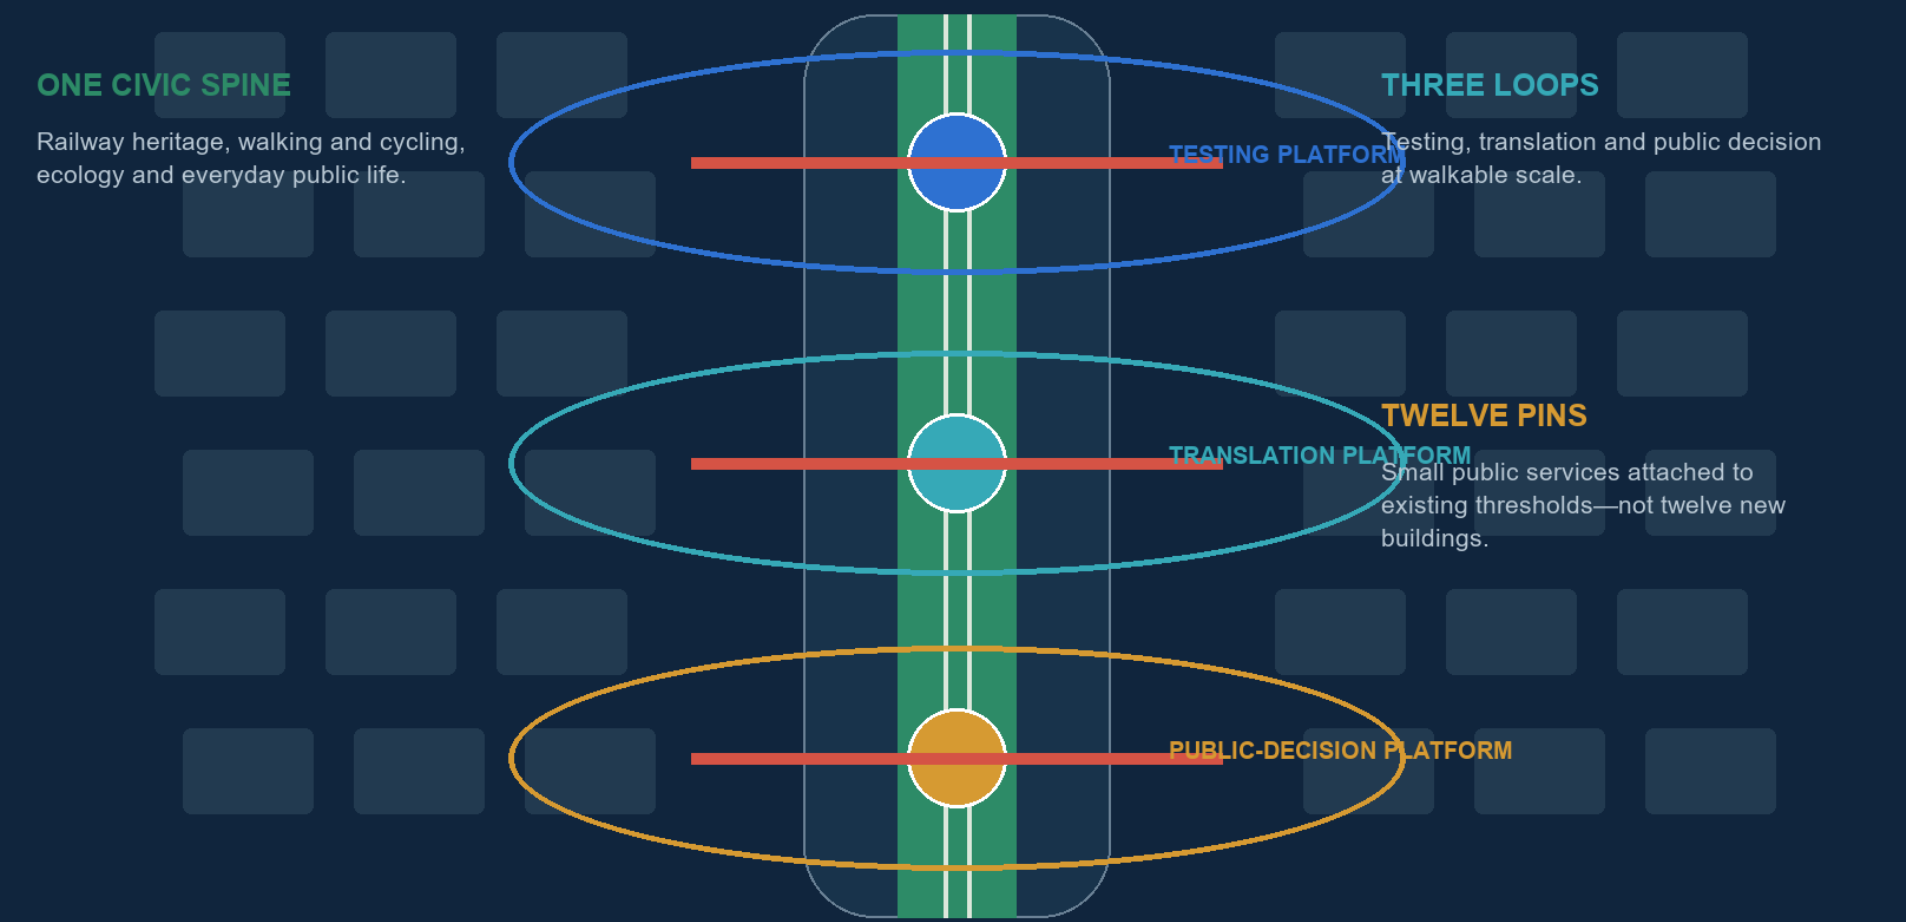

The proposal links coordinated research, overall urban design and detailed key-area design.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

One civic spine, three innovation loops, twelve public-service pins

The provisional boundary is deliberately subdued; public access, platform roles and connections carry the visual hierarchy.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Repair interfaces, do not redraw the park

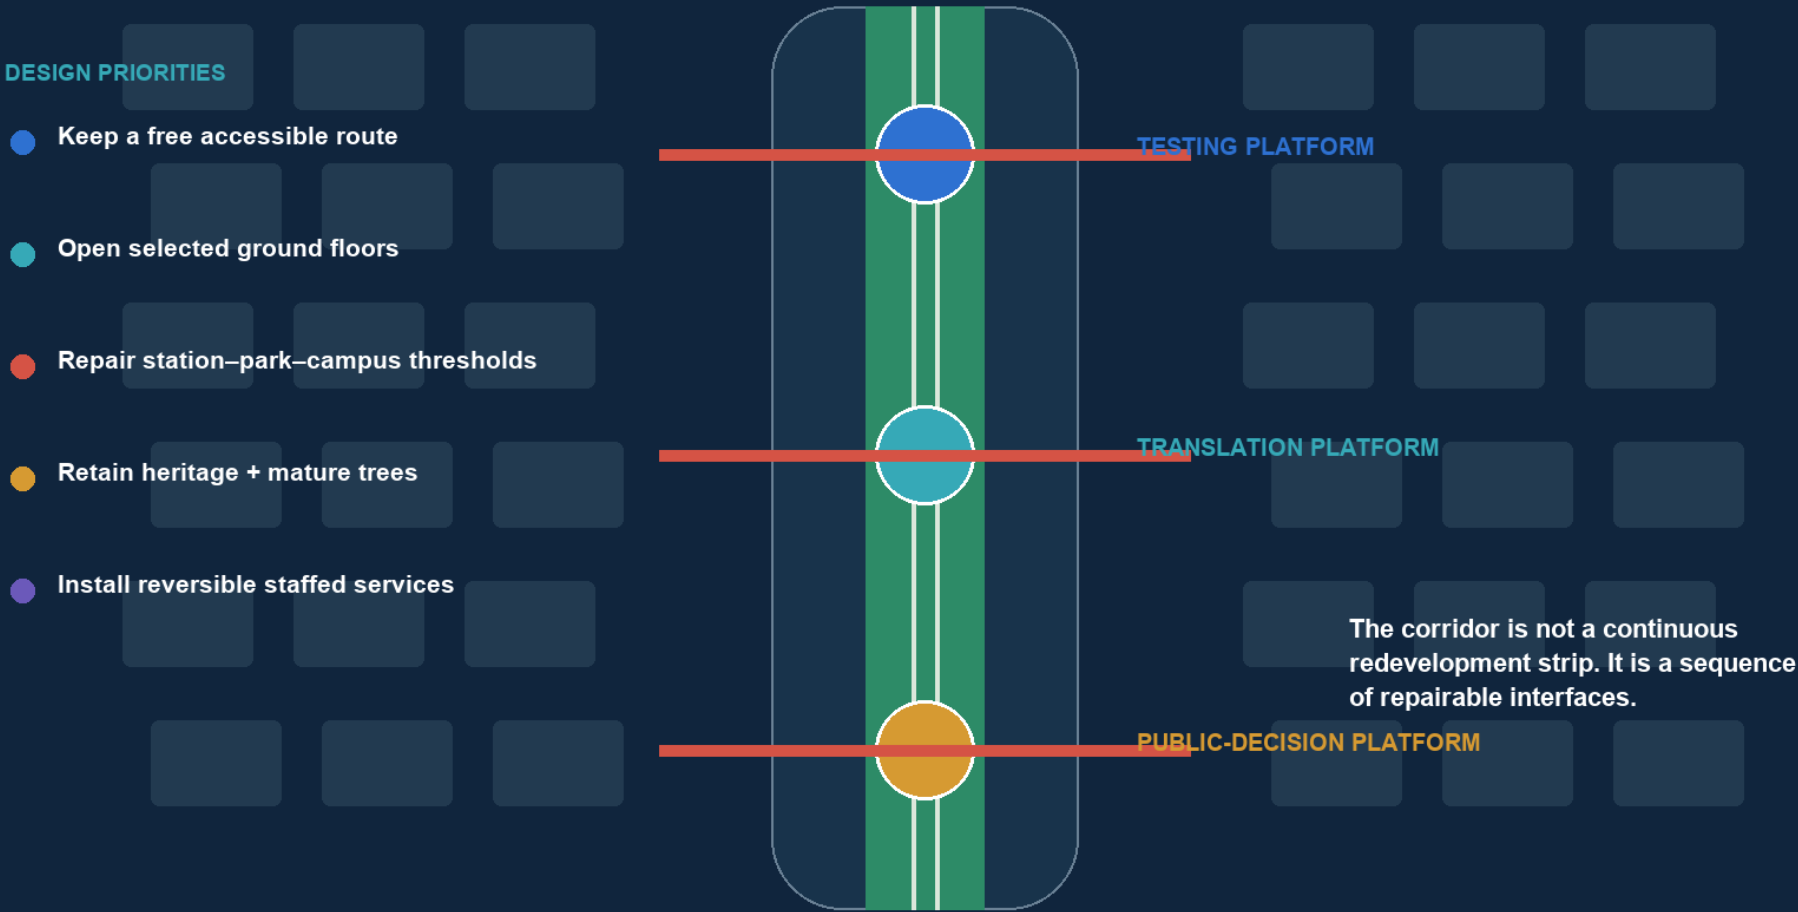

The existing and emerging heritage park remains the spine; the design works at station, campus, community and ground-floor thresholds.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Overall plan: repair interfaces instead of drawing a new corridor

Existing park and railway heritage remain the spine; east–west stitches connect stations, campuses, neighbourhoods and public rooms.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Seven conceptual units, shared uncertainty

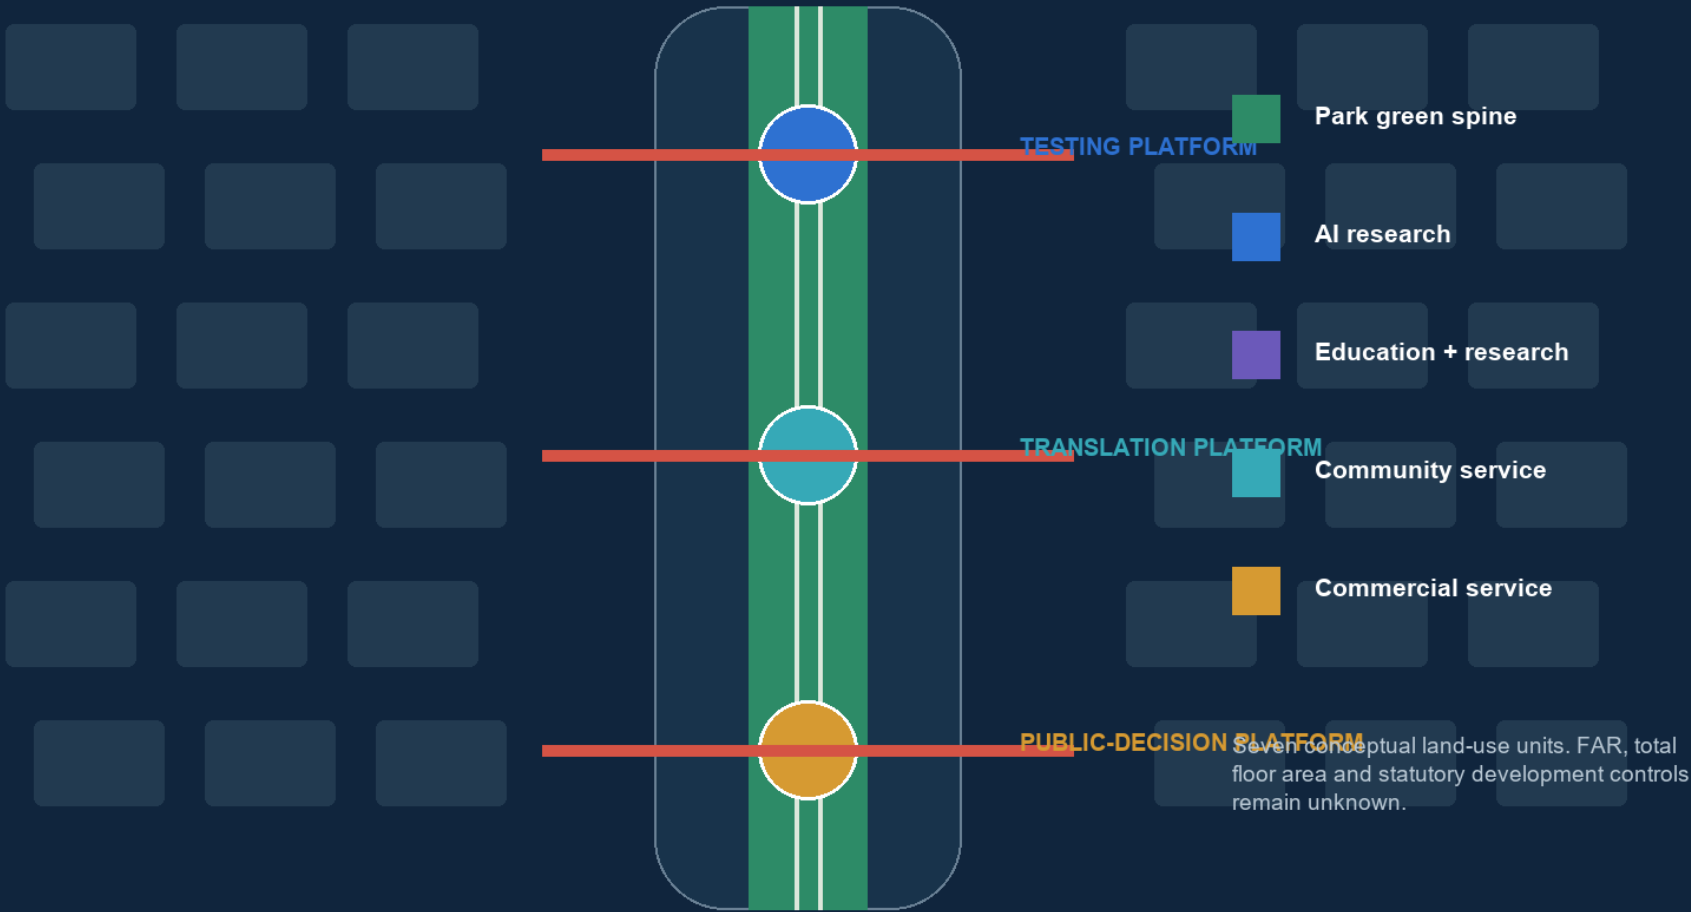

Relationships are complete enough for design review while statutory capacity and ownership remain pending.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Land use and spatial supply: complete coverage, shared uncertainty

Seven conceptual units organize relationships; official controls, ownership and surveyed capacity remain pending.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Three areas, three innovation roles

Zhongzhiyuan tests, AI Origin translates and Dazhongsi enables public decision.

Three key areas / one corridor / three stages of innovation

The areas are connected by public access and a common evidence protocol rather than a single architectural style.

01 ZHONGZHIYUAN

Full-stack testing platform

Research, safety evaluation, standards discussion and the Qinghe interface.

02 AI ORIGIN

Translation platform

University knowledge, open-source practice, incubation and community services.

03 DAZHONGSI

Public-decision platform

Transit arrival, existing commerce, neighbourhood care and consumer protection.

LINK / One heritage spine + three walkable loops + twelve service pins

Conceptual design / provisional geometry / not an official plan or implementation commitment

Same rights, different local forms

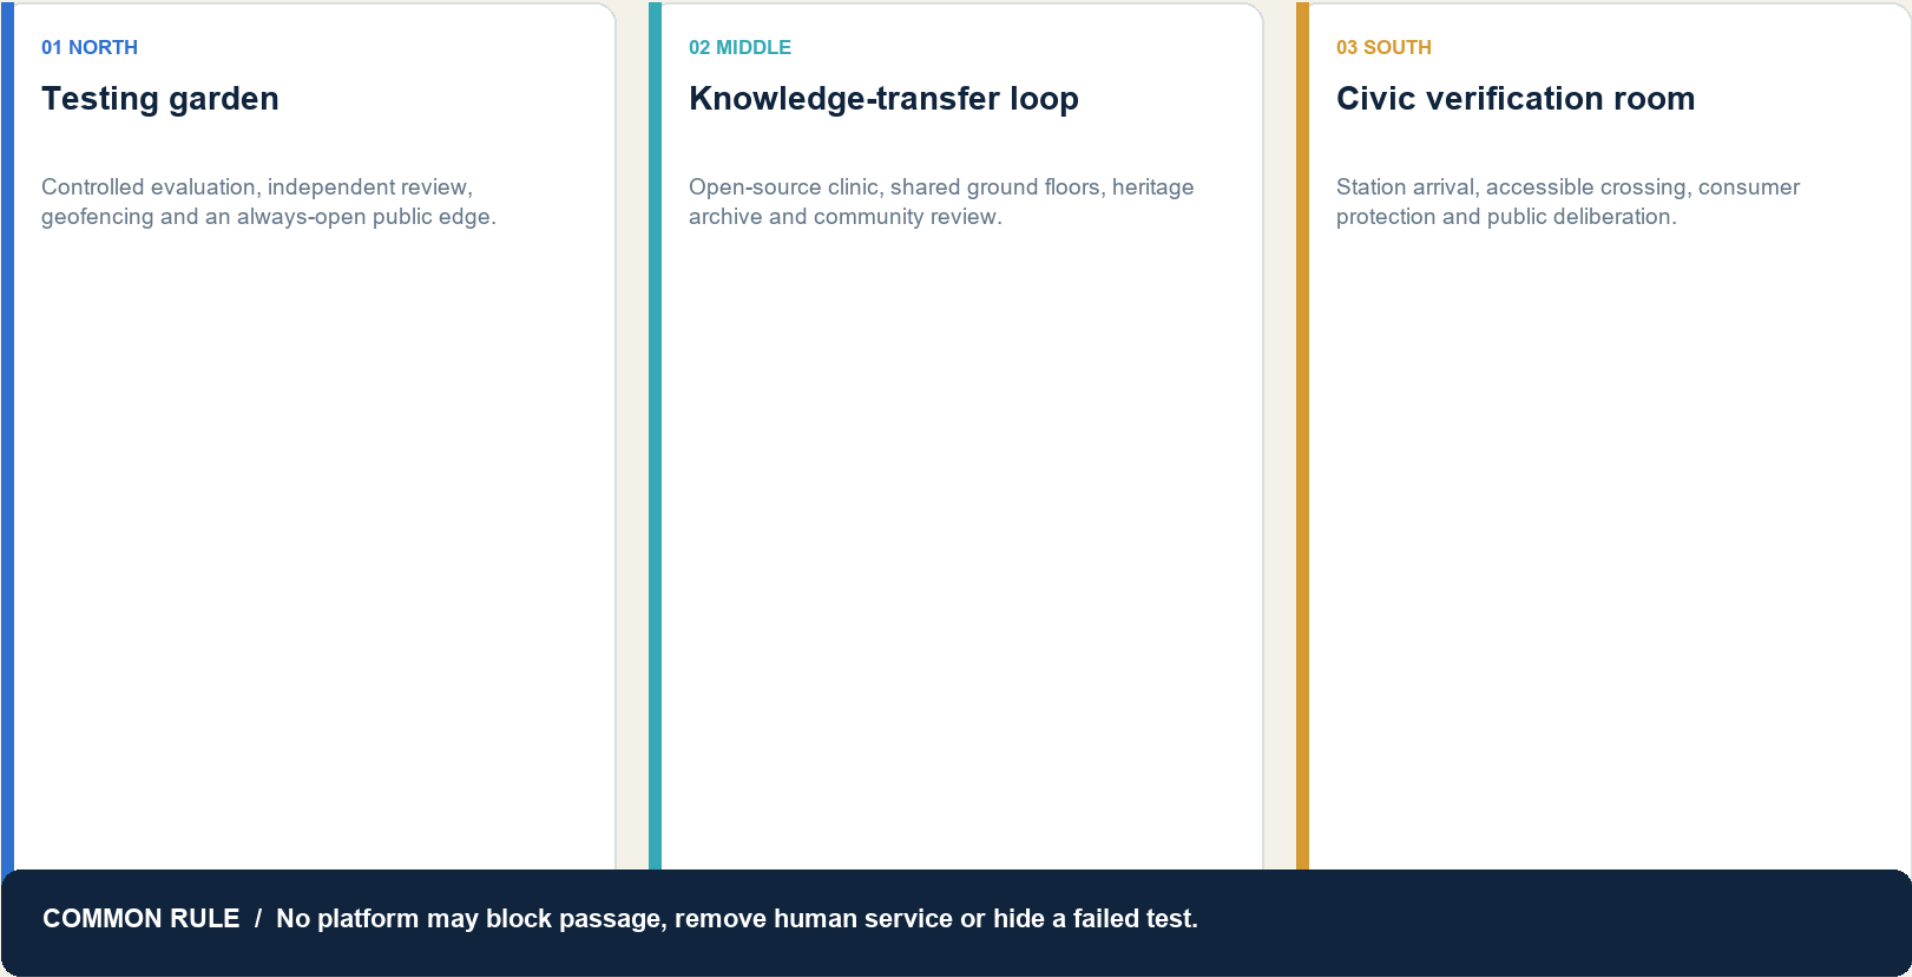

The sequence of passage, care, staffed service, heritage and ecology adapts to each platform.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Three platforms, one civic spine, different urban tasks

Each prototype adapts the same rights-based spatial sequence to its local role.

Conceptual design / provisional geometry / not an official plan or implementation commitment

The railway is a civic threshold

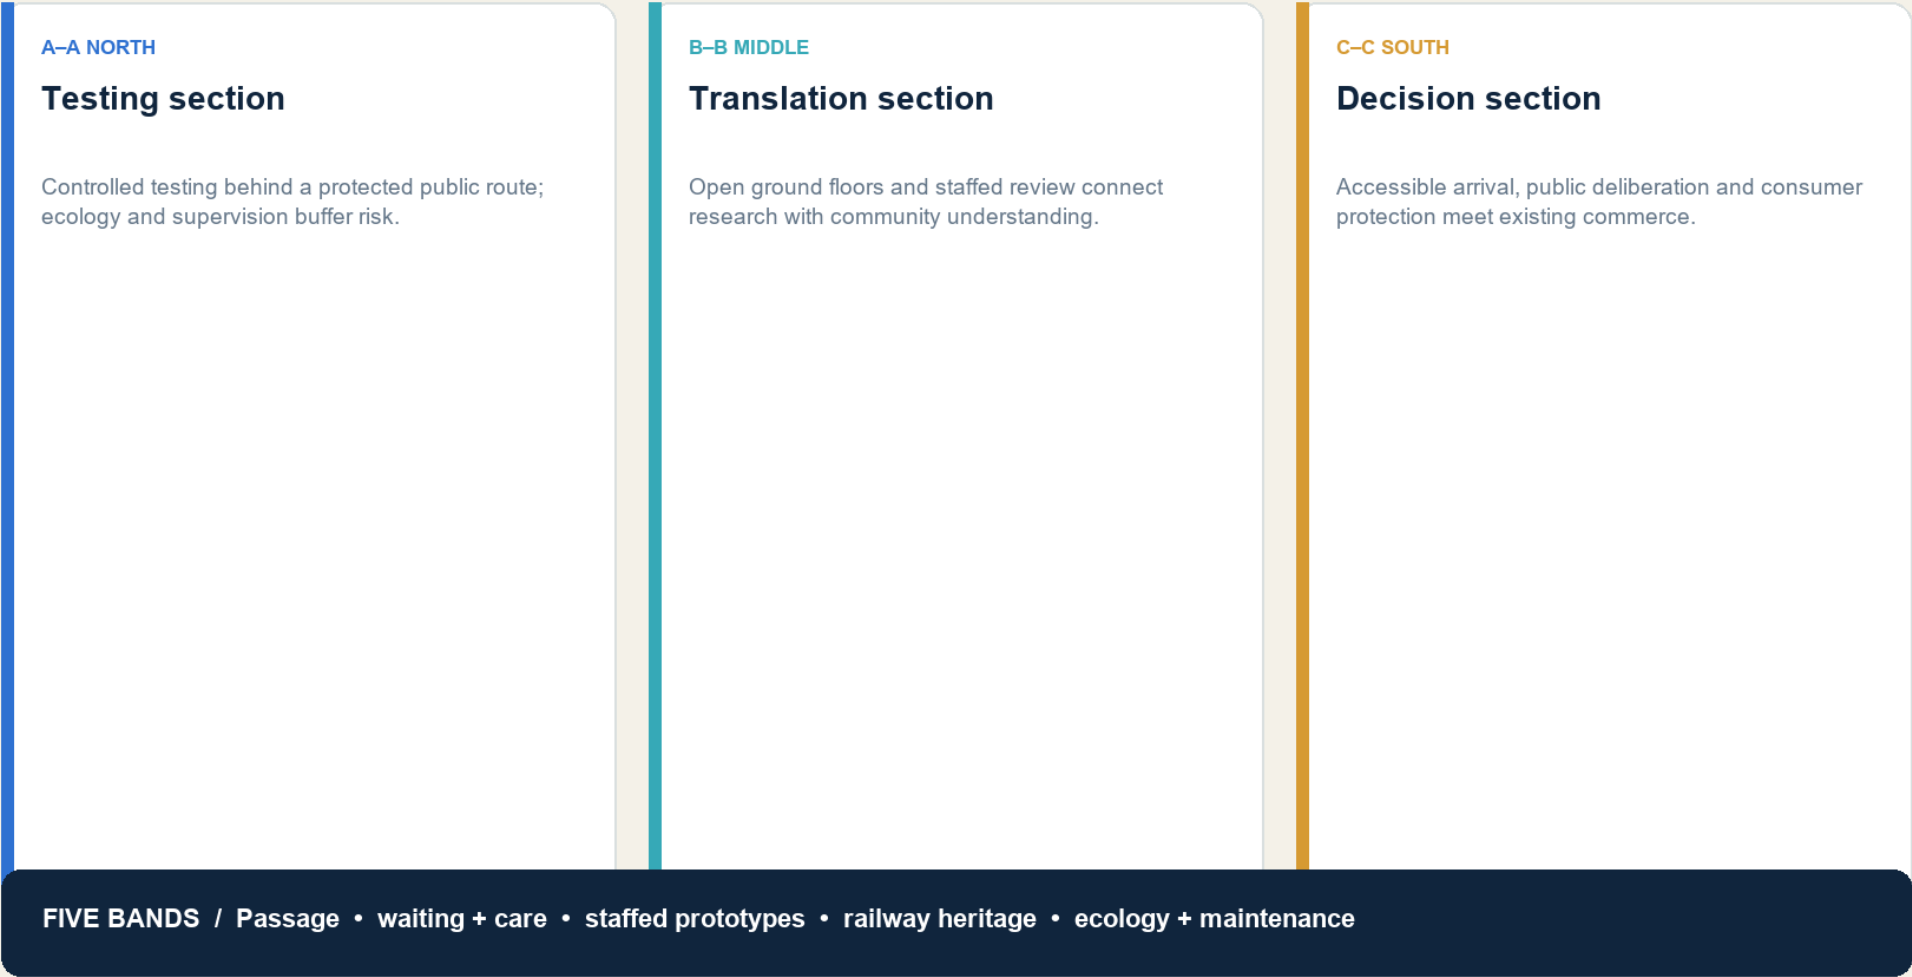

Public access remains legible while testing, translation and decision functions change around it.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

The railway is not a façade; it is a shared civic threshold

The order of the five bands stays constant while widths and details respond to each verified site condition.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Condition - problem - intervention - result

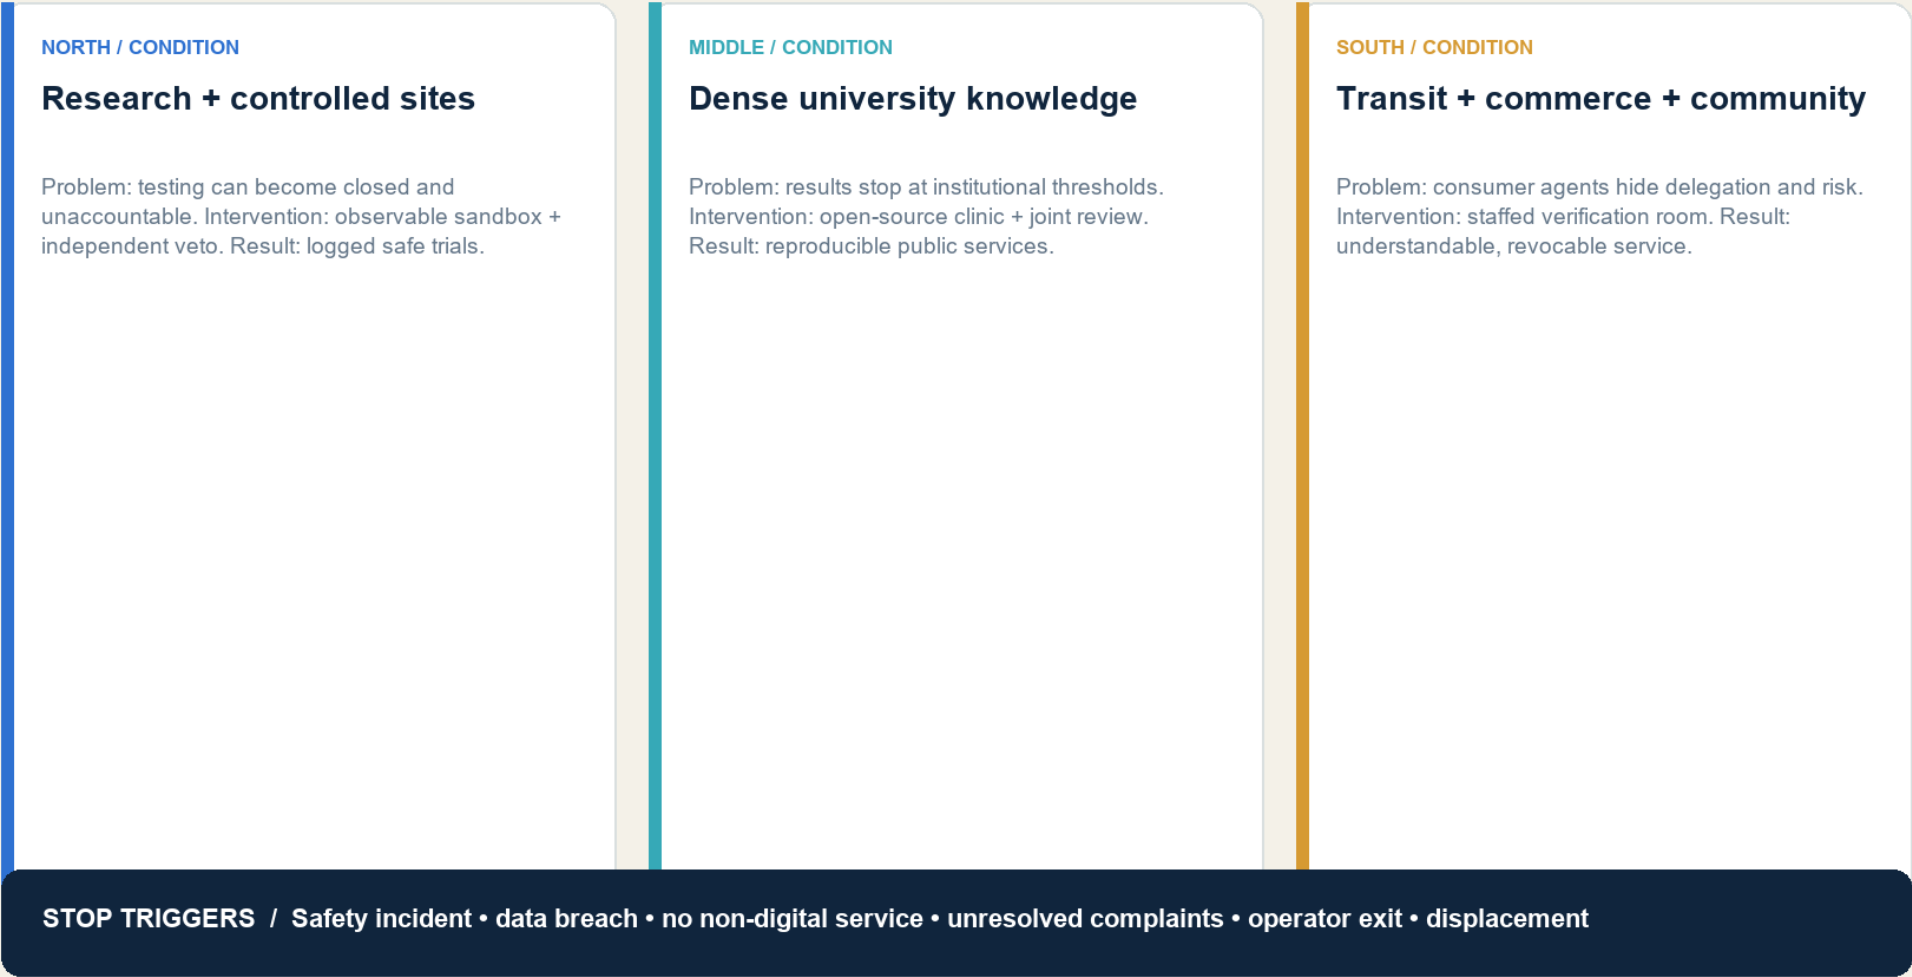

A measurable outcome must lead to a continue, change or stop decision.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Each key area follows one chain: condition → problem → intervention → result

A measurable result must lead to a continue, change or stop decision.

Conceptual design / provisional geometry / not an official plan or implementation commitment

One Walking and Cycling Network and Blue-Green Space system

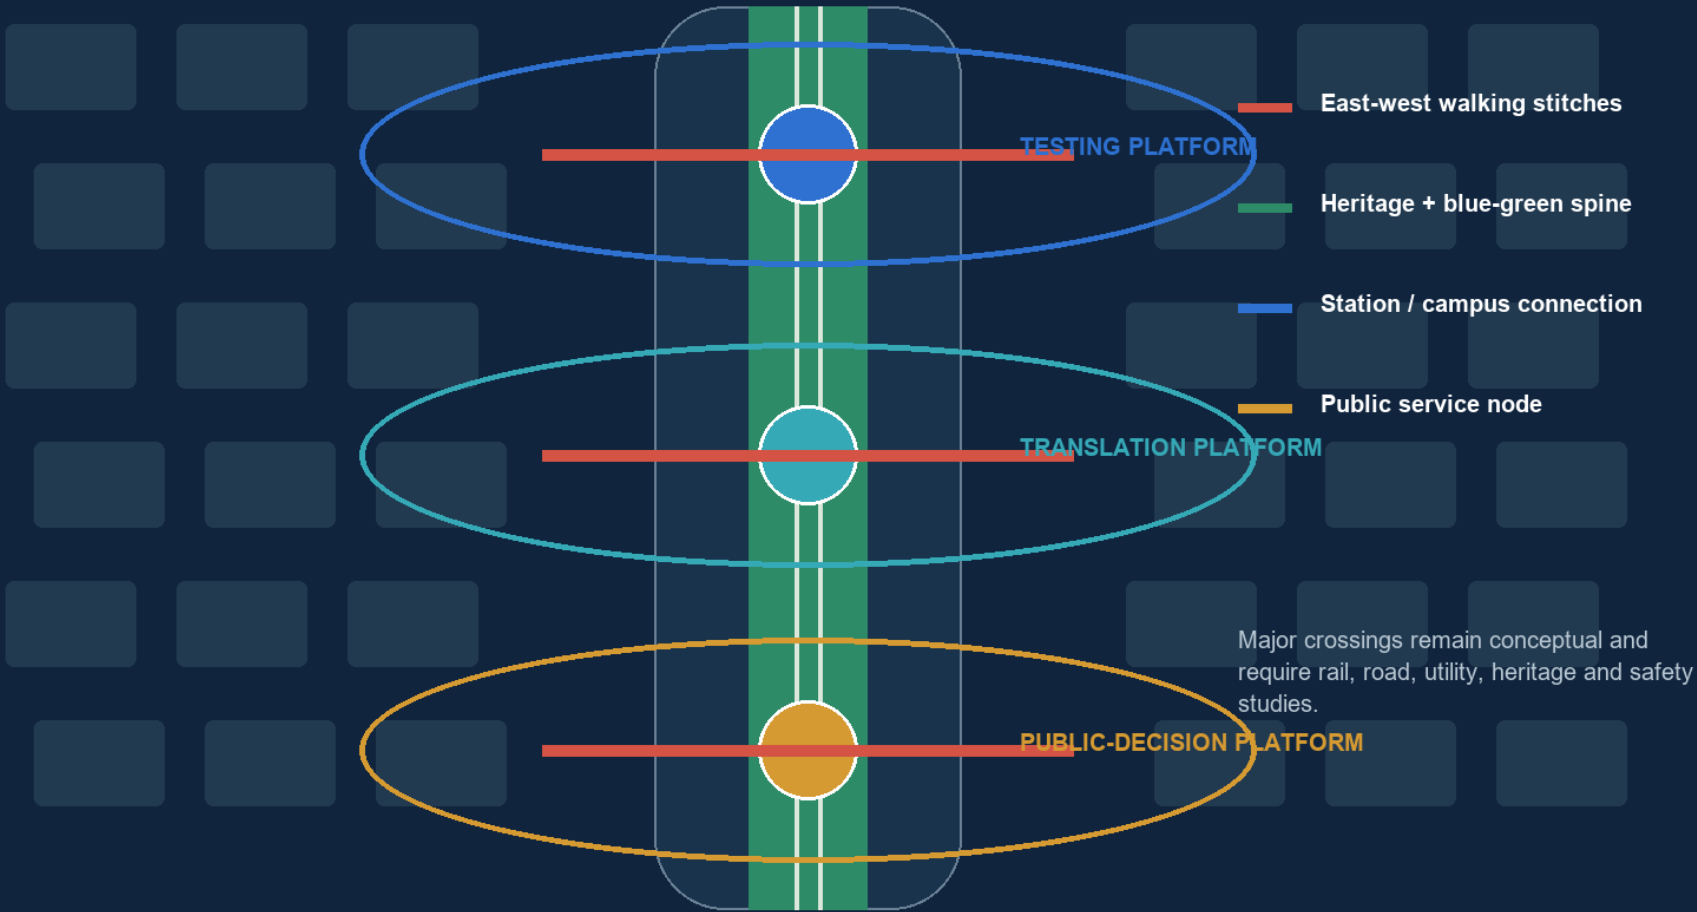

Accessibility, rail interchange, landscape continuity and service nodes are designed together.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Walking, blue-green space and public scenarios form one corridor

Accessibility, rail interchange, park continuity and service nodes are designed together.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Who opens, pays, reviews and stops

Public coordinator, site host, service operator and independent reviewers retain distinct duties.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Responsibility starts with who opens, operates, reviews and stops a service

The framework is conceptual; named real-world bodies, budgets and agreements remain to be confirmed.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Evidence before permanence

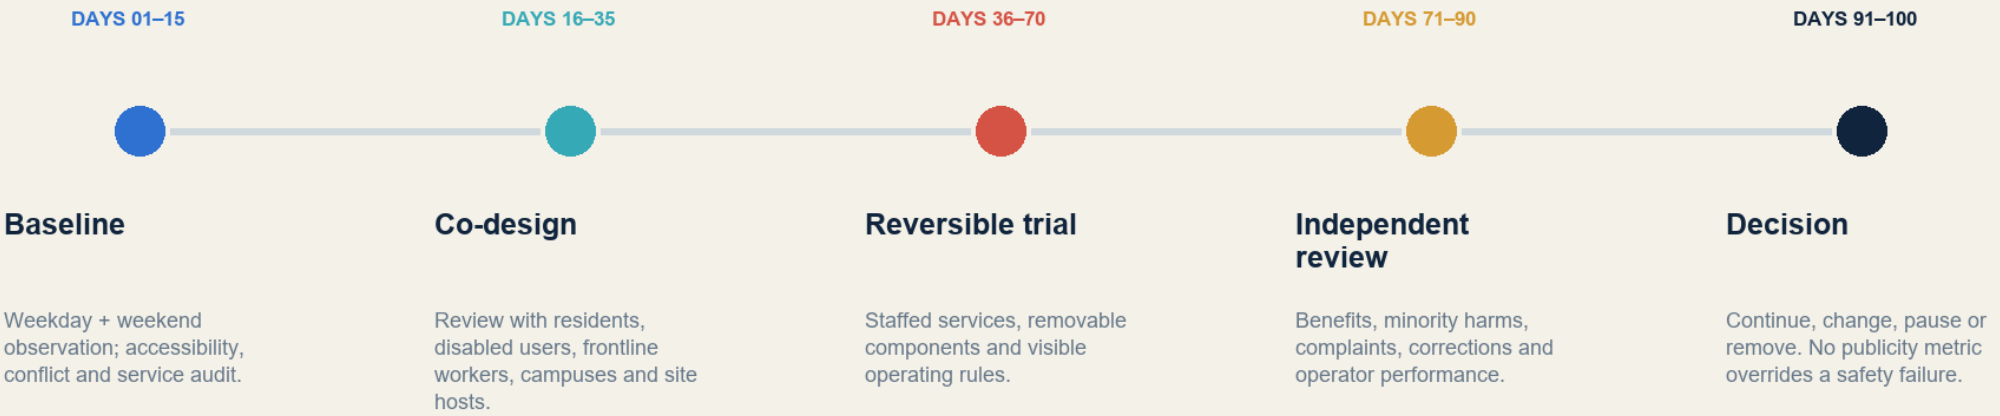

Baseline, co-design, reversible trial, independent review and an explicit decision replace launch-event logic.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

A 100-day pilot must produce a decision, not a temporary festival

Every platform follows the same evidence sequence and can reject permanence.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Implementation passes gates

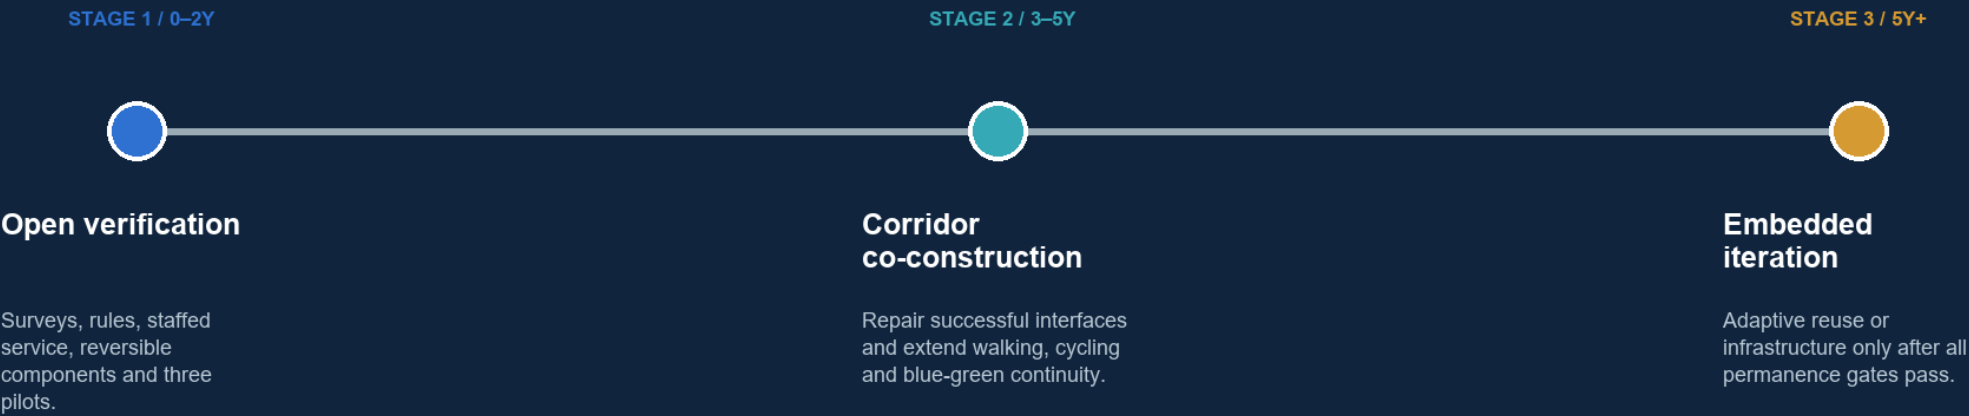

Permanent work follows verified conditions, equal access, lawful data, public benefit, a named operator and no displacement.

JINGZHANG COMMONS / CENTENNIAL JING-ZHANG AI INNOVATION BELT

V14 / ENGLISH DISPLAY

Implementation passes gates before permanence

No stage is automatic; field evidence, public benefit and accountable operations determine progression.

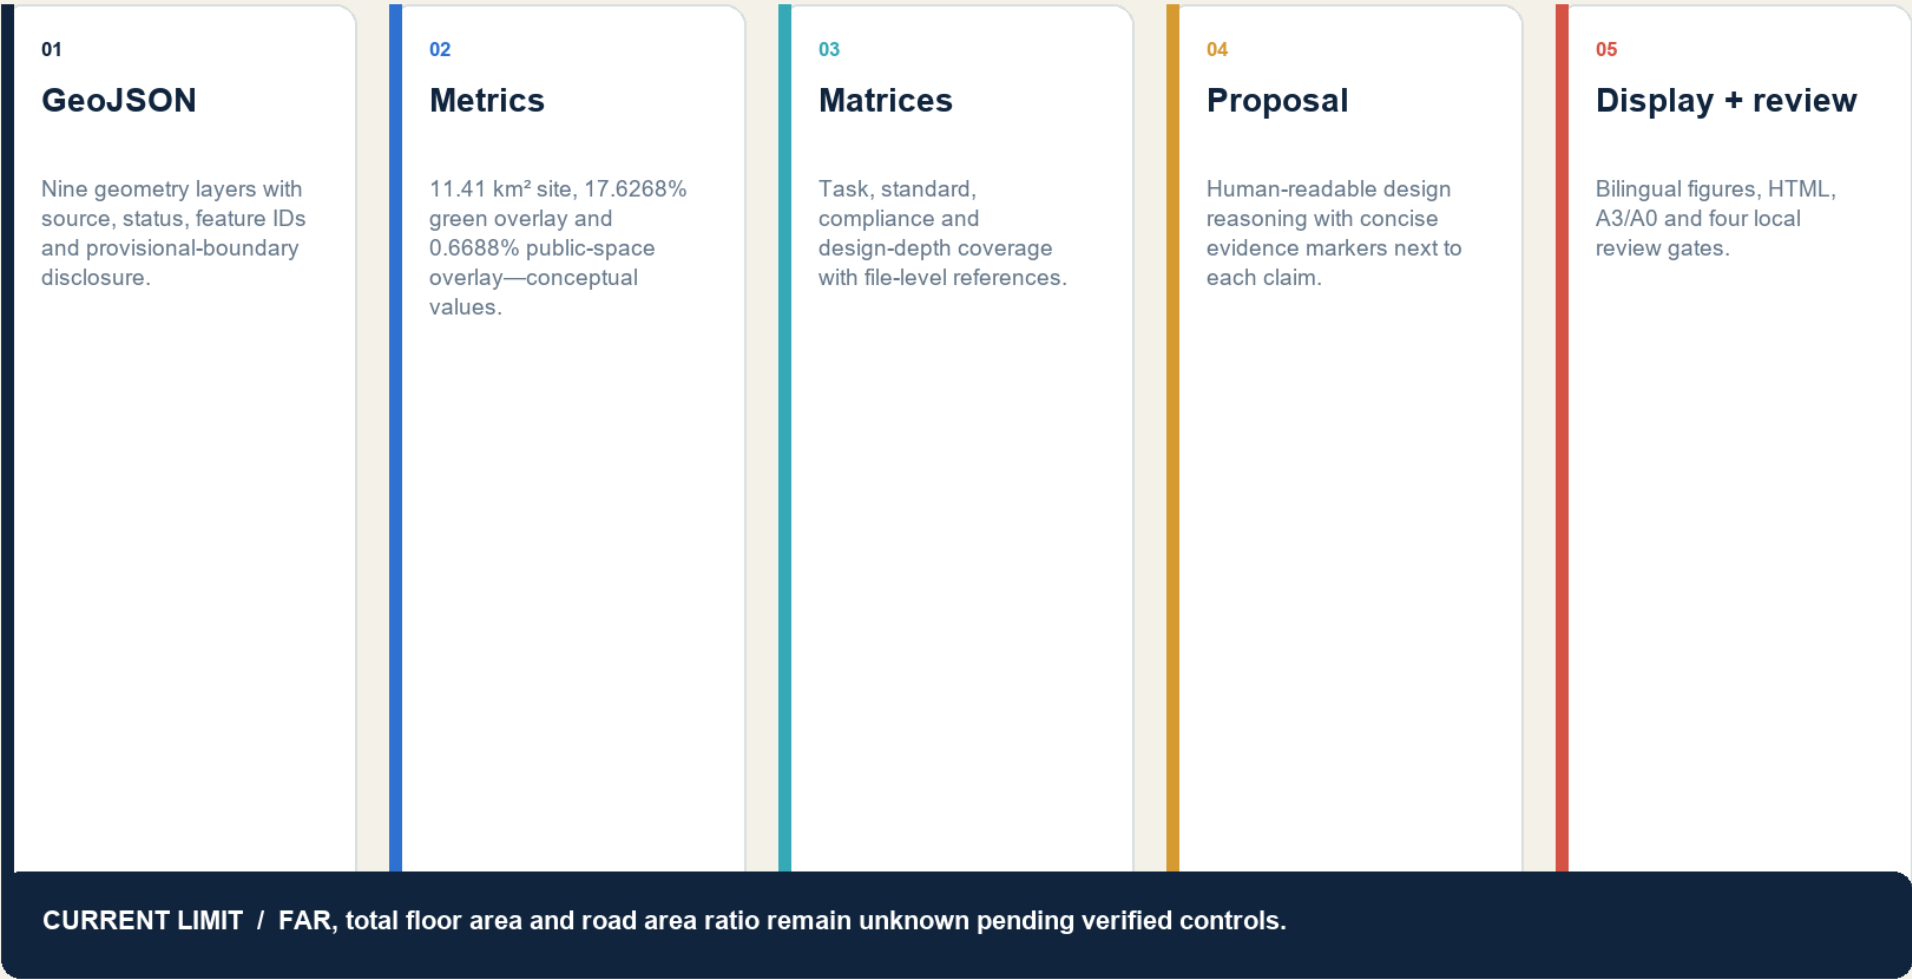

Conceptual design / provisional geometry / not an official plan or implementation commitment

Readable claims remain traceable

GeoJSON, metrics, matrices, proposal, bilingual displays and review outputs form one evidence stack.

Metrics and evidence: every readable claim can be traced and recalculated

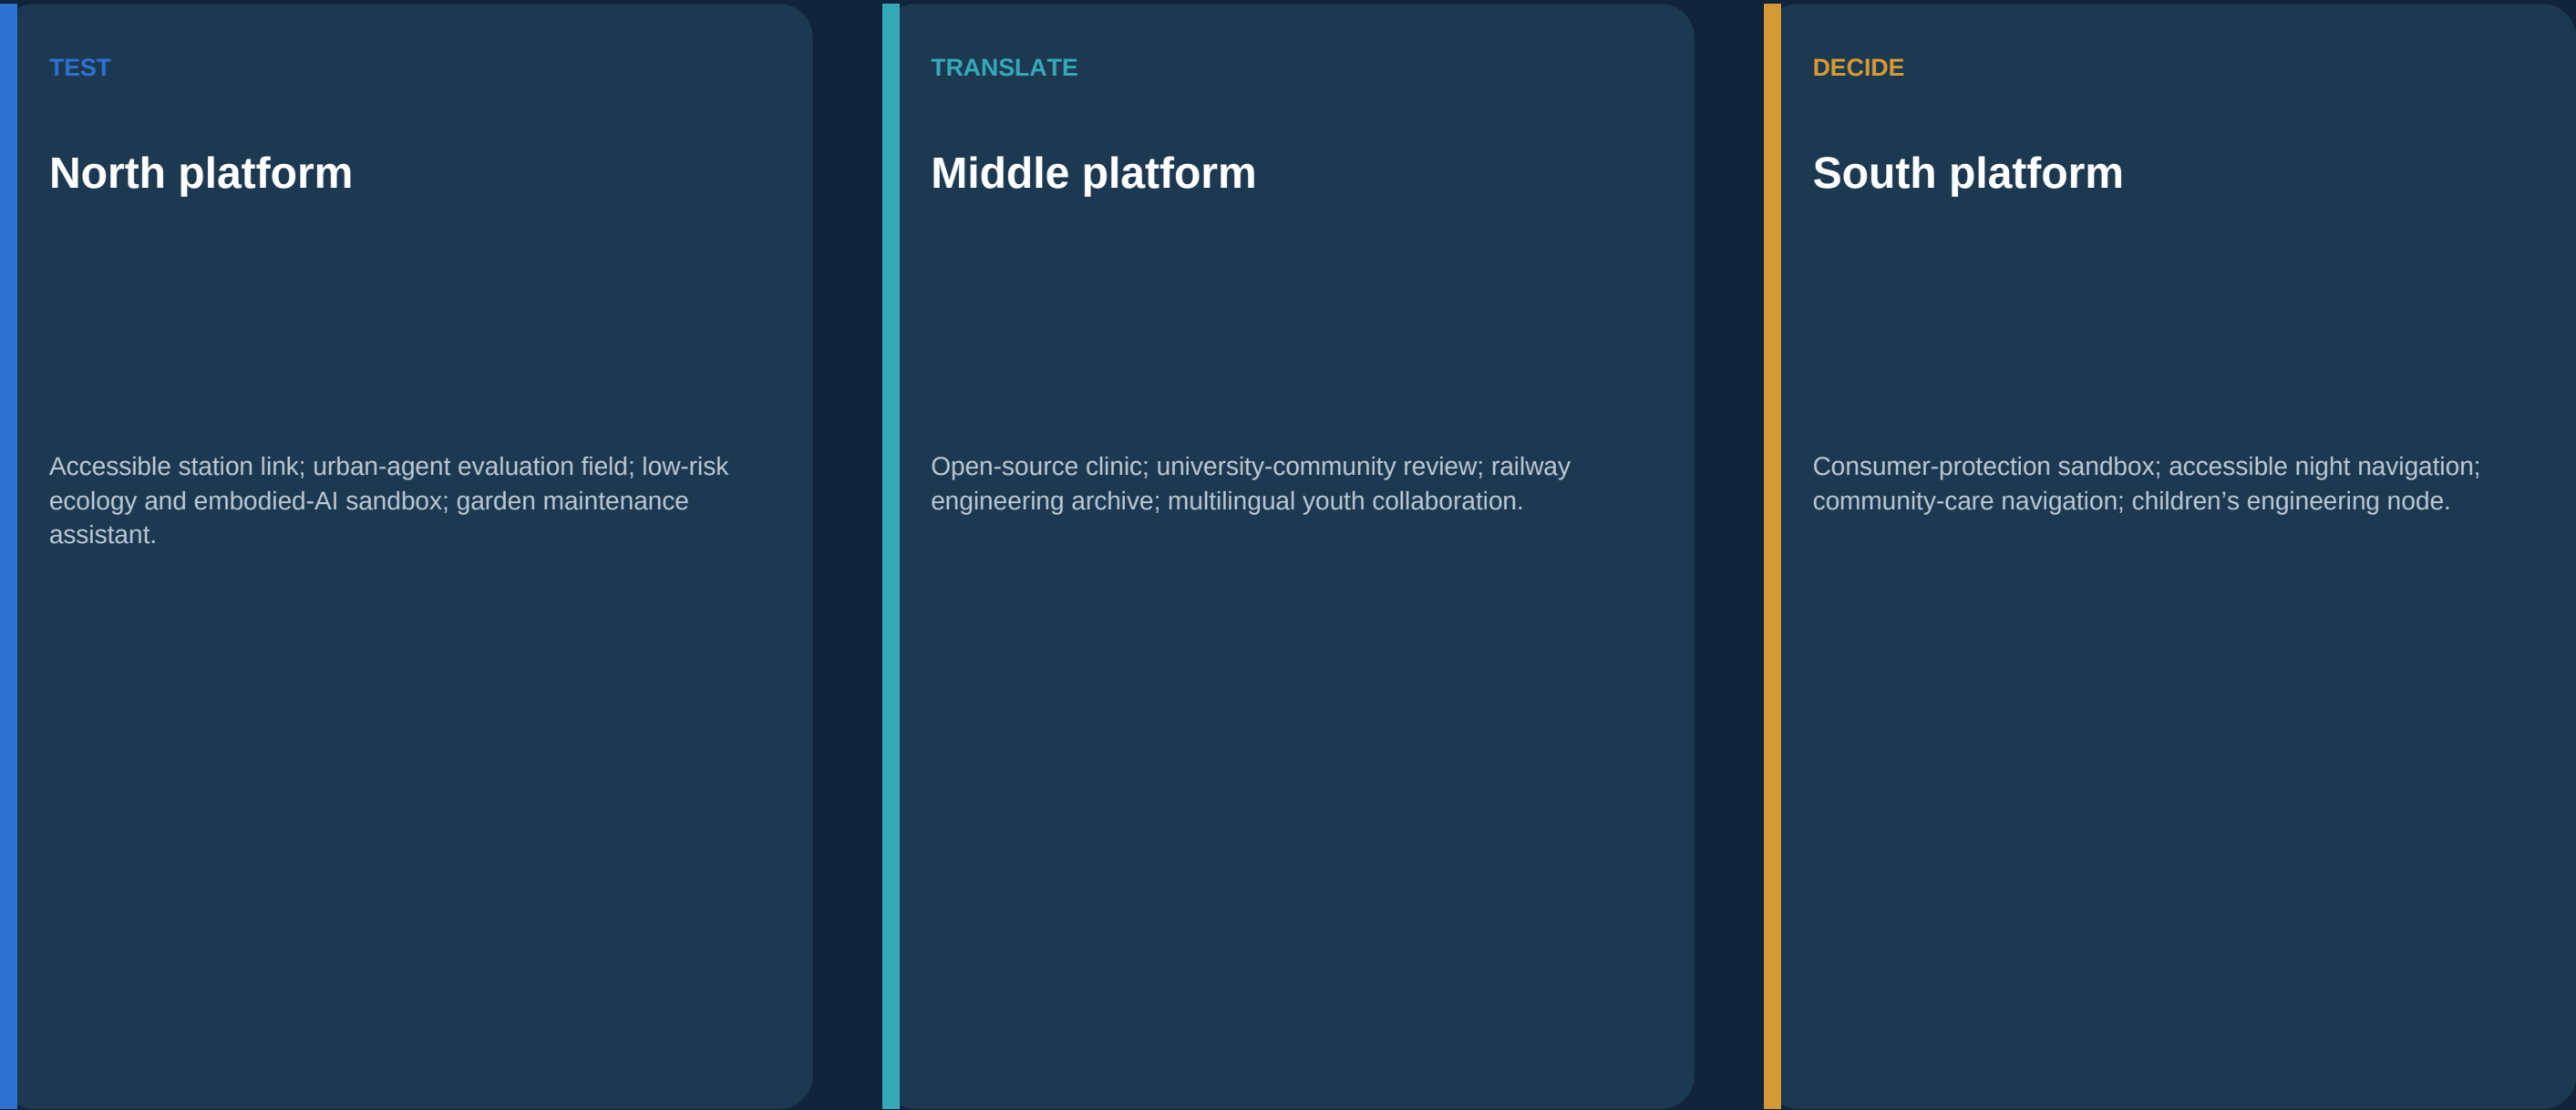

Structured evidence carries exhaustive coverage; the proposal keeps only claim-adjacent anchors.

Conceptual design / provisional geometry / not an official plan or implementation commitment

Twelve service pins, not twelve iconic buildings

Every scenario uses minimum data, visible AI disclosure, human review, an equivalent non-digital channel, reversible installation and an exit ledger.

The overlooked user is the first user

No QR code or smartphone may become the only access route. Public space remains useful after every digital layer is switched off.

ACCESS

Disabled users

Continuous accessible journey, tactile/high-contrast guidance, human assistance and passable routes without digital service.

CARE

Older users + caregivers

Telephone, paper guidance, staffed counters, seating, shade, stroller routes and no compulsory app.

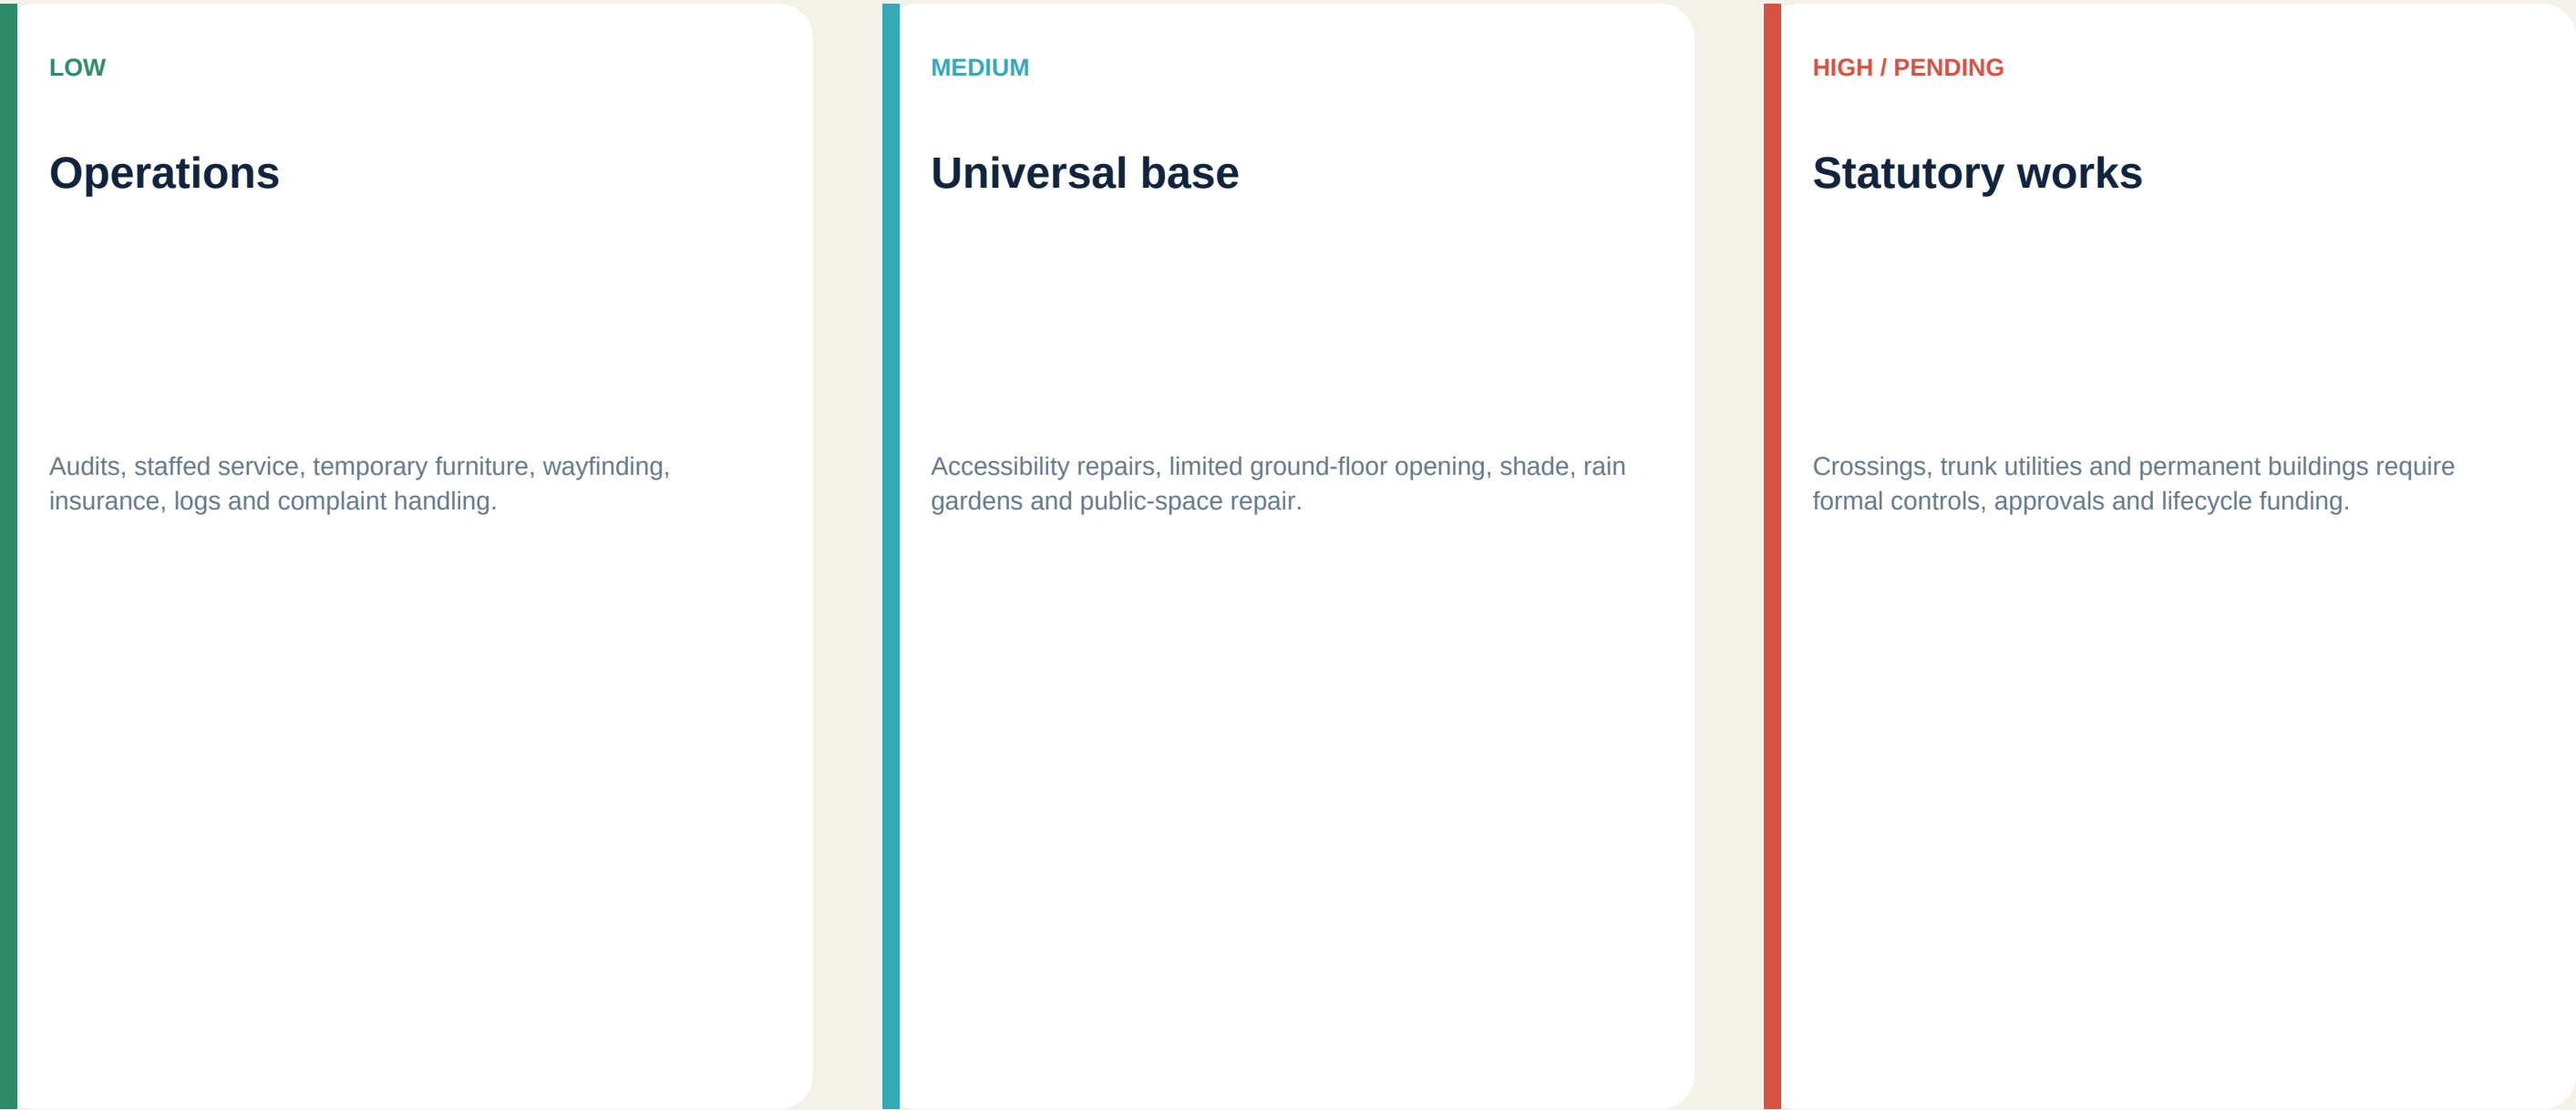

WORK

Night + frontline workers

Safe lighting without biometric surveillance; protected logistics; authority to switch systems to manual mode.

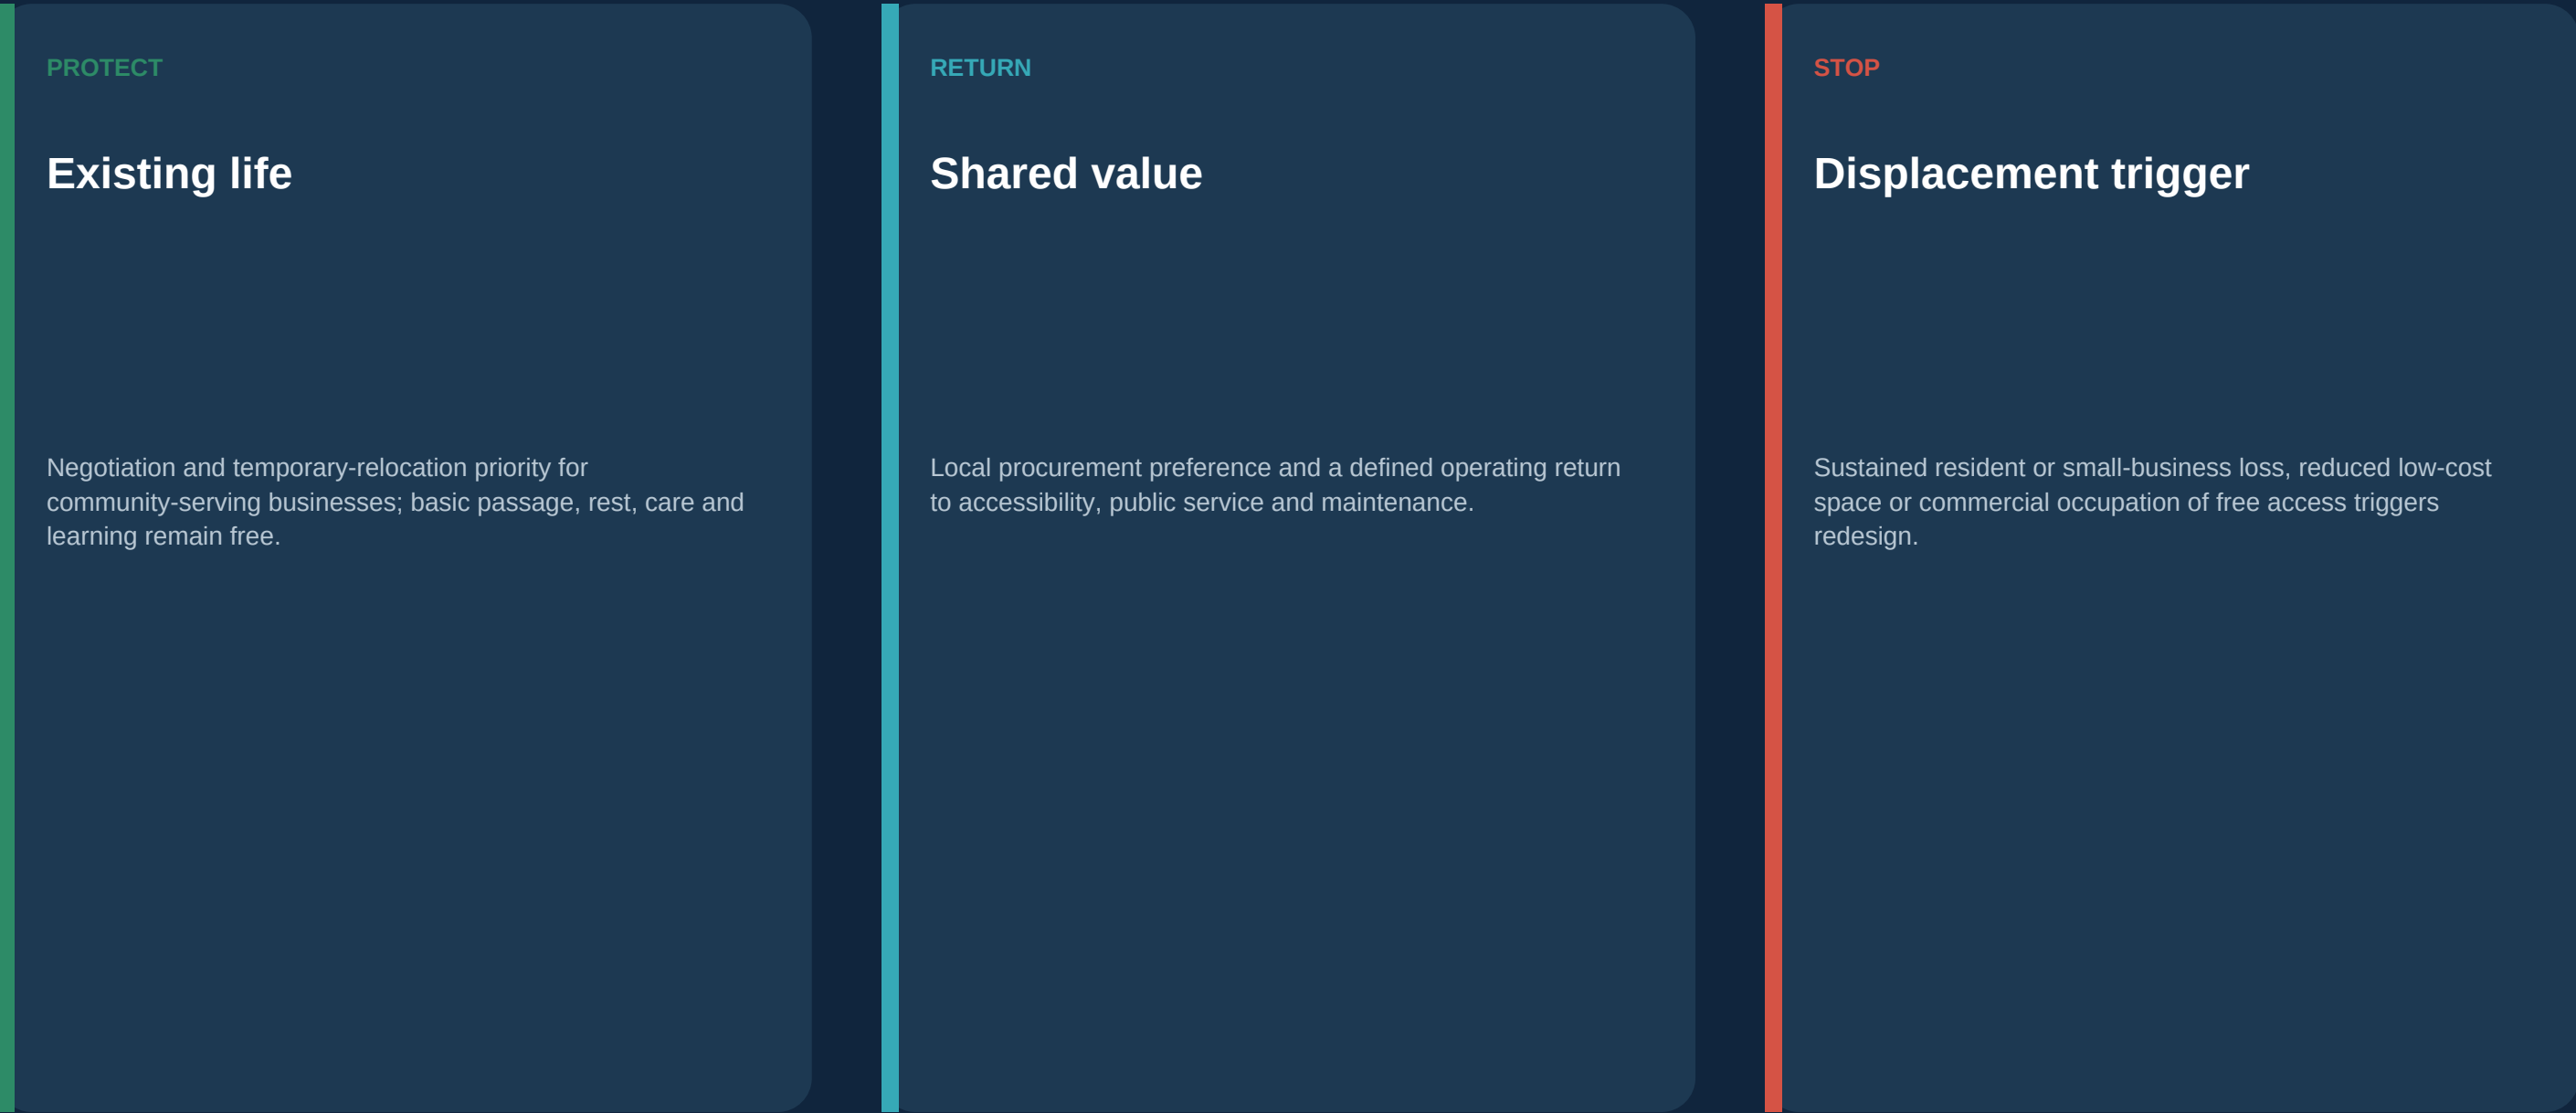

Costs are decision bands, not invented estimates

Low and medium reversible work may begin after verification. High-cost crossings, trunk infrastructure and permanent construction remain pending statutory study.

Growth must not displace existing life

Baseline residents, small businesses, rents, low-cost innovation space, free public hours and local employment before intervention.

Make time, memory and judgment perceptible

Art remains reversible, does not block heritage or access, avoids ambient surveillance and stays useful when interaction is off.

TIME

Century Scale Platform

Weathering-steel line, tactile markers, warm guidance light and sitting edges form a verified engineering timeline.

MEMORY

City Echo Platform

Voluntarily activated, licensed oral-history fragments without ambient listening or compulsory participation.

JUDGMENT

Public Algorithm Theatre

Long table, paper cards, tactile models and human facilitation support continue/change/stop decisions.

Mechanisms travel; planning authority does not

International cases test public-space stewardship, data governance, living labs and displacement risk. They do not supply Beijing boundaries or metrics.

COMPARE

Public-space legacy

Atlanta, the High Line and other linear heritage projects reveal both connective value and displacement risk.

GOVERN

Technology + rights

Toronto, Helsinki and European living labs reinforce consent, staged testing, interoperability and accountability.

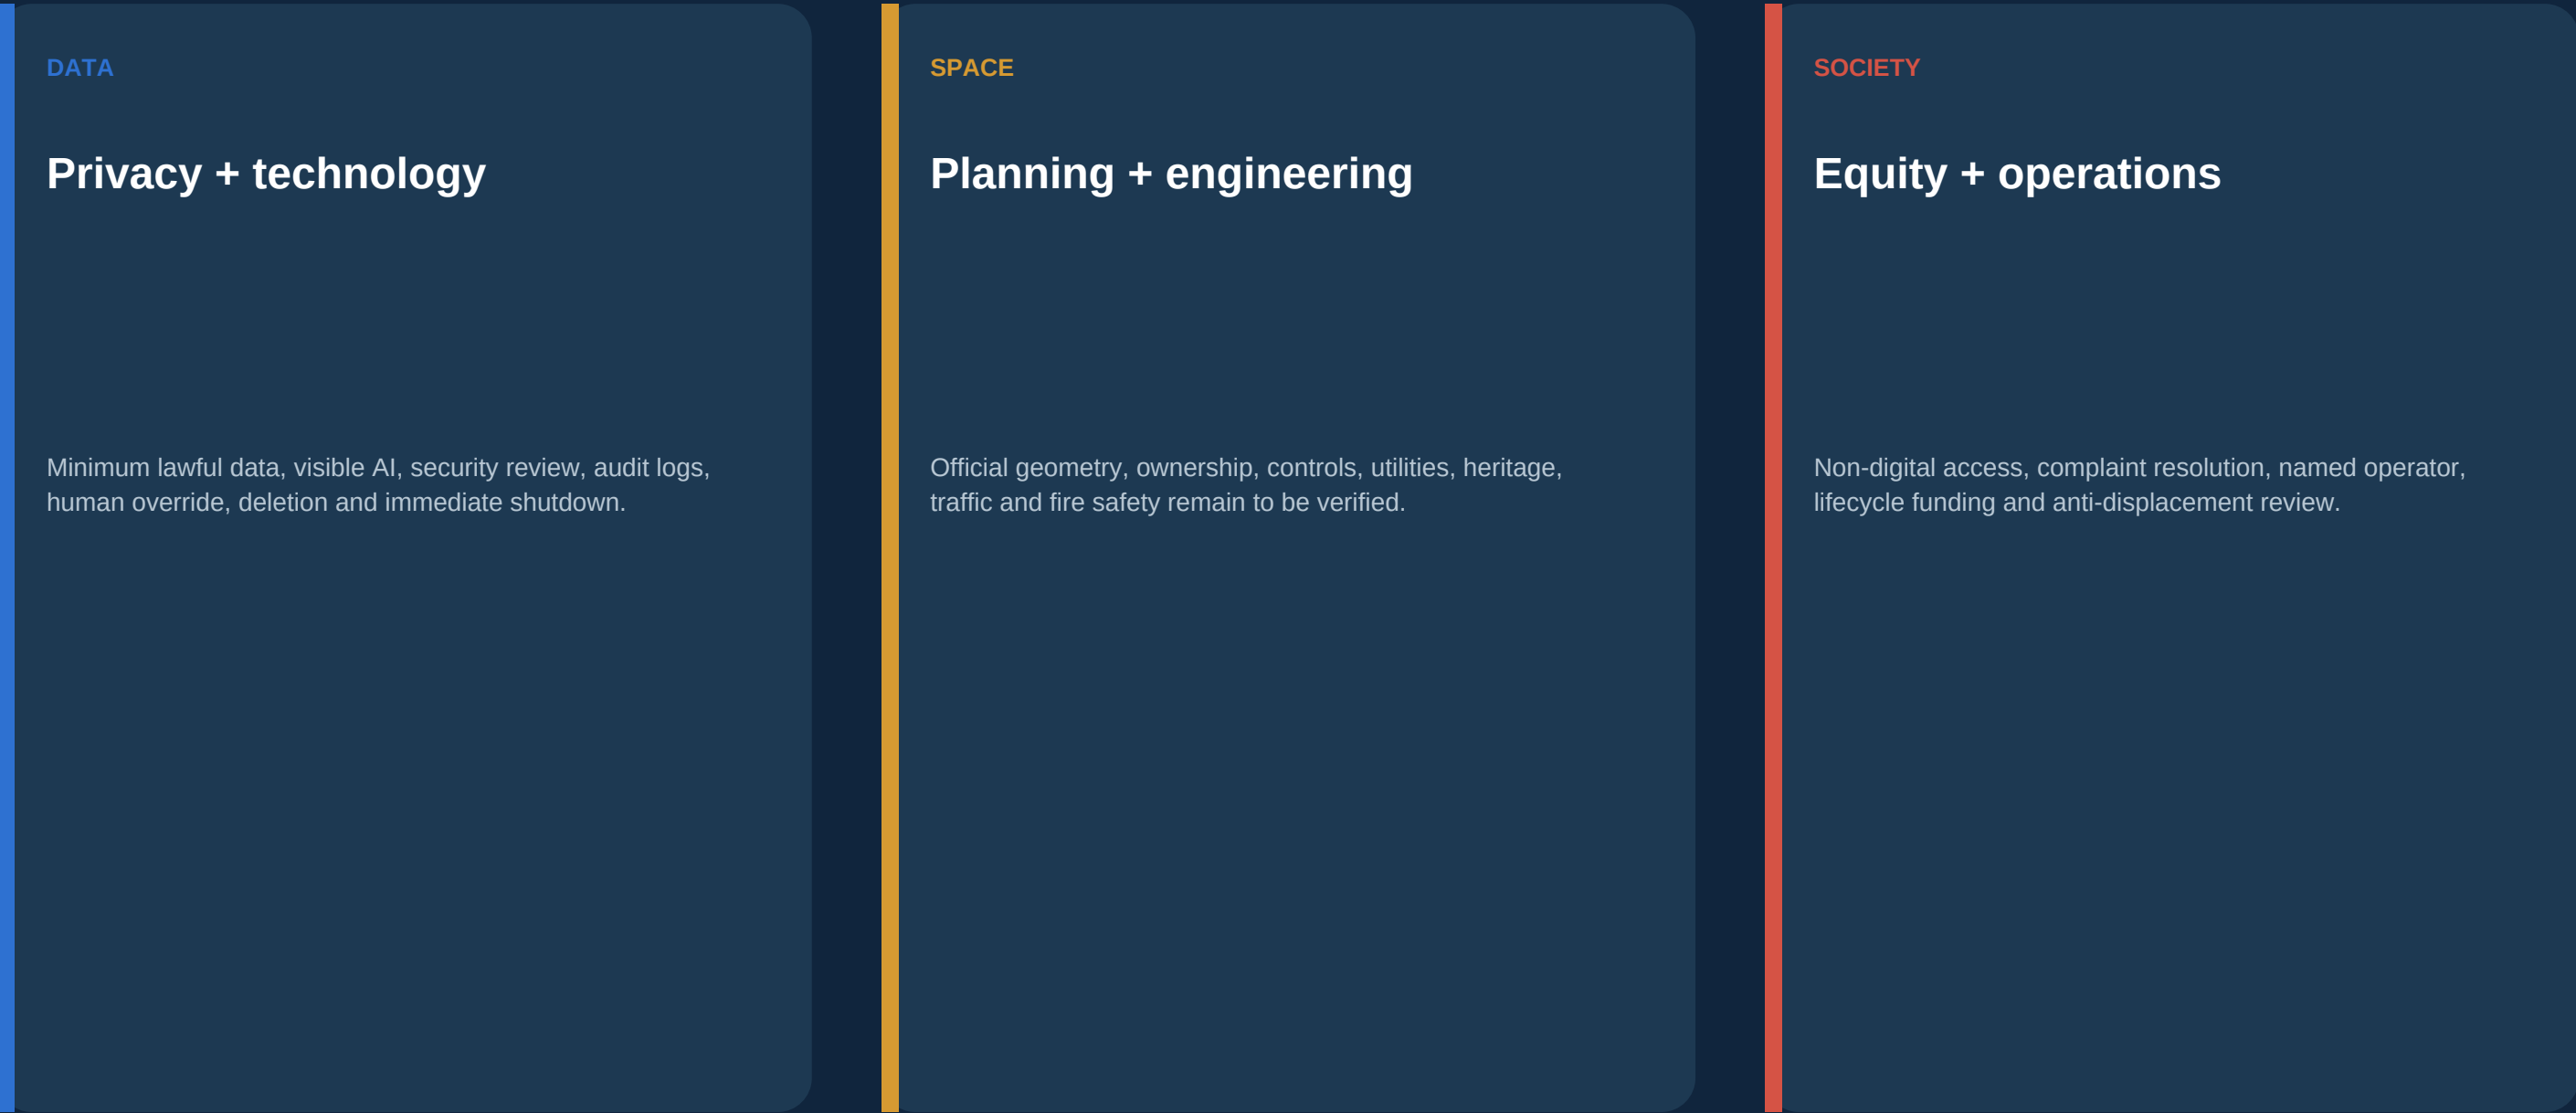

LOCALIZE

Beijing decision

Local residents, institutions, statutory planning and verified field conditions retain authority over implementation.

A passed gate is not an approval

Repository intake readiness does not equal gallery selection, award, implementation approval or government endorsement.

The package keeps exhaustive evidence outside the prose

Sources, assumptions, metrics, compliance, standards and depth matrices remain machine readable and independently reviewable.
