Evidence Boundary and Overall Concept

Jing-Zhang Beyond the Screen | Concept and Evidence Status

Design Proposition

AI moves into the background; public life returns to the foreground.
Civic access never depends on a phone, app, or QR code.

- 01 Screen-optional civic spine
- 03 Three interface yards
- 02 Two service loops
- 12 Screen-optional prototypes

Evidence Status

Provisional overall boundary	PROVISIONAL
Three provisional key areas	PROVISIONAL
Agent-generated concept layers Provisional area 11.413 km ² package recalculation only	DESIGN
Statutory intensity and road redlines	UNKNOWN

The provisional overall extent and three key areas support concept and recalculation only. One civic spine, three interface yards, two loops, and twelve prototypes share one evidence status.

Three-Level Scope and Continuous Program Zones

Conceptual Land Use | Research - Validation - Translation - Adoption

Six Continuous Program Zones

Spatial Logic

- 1 A complete partition tests relationships without claiming statutory land use
- 2 The civic spine crosses all zones and resists campus privatization
- 3 Three yards correspond to validation, translation, and adoption
- 4 All layers are recalculated when official polygons arrive

catDforD • 2026-08-10 • EPSG:4548

Six conceptual zones cover the provisional boundary to test relationships among research, validation, translation, community, culture, and everyday service; they do not alter statutory land use.

PROVISIONAL GEOMETRY - CONCEPTUAL RECOMMENDATION - RECALCULATE WITH OFFICIAL POLYGONS

Three Differentiated Interface Yards

Three Interface Yards | One Principle, Three Validation Stages

01 Embodied Validation

Zhongzhiyuan: Embodied Validation Yard

01 Supervised robotics test yard

02 Tactile safety edge

03 Staffed booking and review desk

04 Low-carbon Qinghe interface

02 Commons Translation

Beijing AI Origin Community: Commons Translation Yard

01 Physical open-source exhibits

02 Campus-near learning workshops

03 Print and voice service entry

04 Campus-district walking links

03 Everyday Adoption

Dazhongsi AI Cluster: Everyday Adoption Yard

01 Staffed transit fallback

02 QR-optional civic service window

03 Four-quadrant legibility system

04 International showcase shared with community

Zhongzhiyuan tests whether embodied systems can yield; the Origin Community translates code into physical public knowledge; Dazhongsi tests fairness in ordinary transfer and service.

Mobility, Blue-Green Space, and Staffed Service

Mobility × Blue-Green Public Space

Civic Interface Cross-Section

← Equivalent non-digital route across every module →

Fourfold Redundancy

- 触 Touch: texture and physical buttons
- 形 Shape: coded high-contrast signs
- 声 Sound: beacons and concise voice
- 人 Human: staff, phone, and print

Key Metrics

Touch, shape, audio-light, and human redundancy preserve access when one sense, language, or device fails. Connections across arterials, railways, or stations await professional review.

Core Metrics and Reproducible Evidence Chain

Core Metrics | One Evidence Set for Figures, Tables, HTML, and PDFs

Evidence Chain

Known / Unknown

KNOWN / 可复算	UNKNOWN / 待官方确认
● Provisional area, layer unions, line lengths ● Three yards, 12 prototypes, six personas ● 100% human fallback, zero screen-required civic prototypes	● Official overall and key-area polygons ● FAR, height, setback, and road redlines ● Ownership, utilities, fire, flood, heritage, and budget

Figures, tables, HTML, and PDFs read the same GeoJSON, metrics, scenarios, and assumptions. Known values are reproducible; FAR, height, road redlines, and engineering conditions remain unknown.

Provisional extent 11.413 km2
Concept green 9.3%
Concept public space 2.3%
Human fallback 100%

Twelve Prototypes and Six Personas

S01 Tactile Direction Rail Continuous texture, shape coding, and high-contrast signs without phone navigation.	S02 Audio-Light Crossing Beacon Audible, tactile, and visible crossing cues prioritizing low-vision and older users.	S03 Dual-Channel Civic Service Window Voice, print, physical buttons, and a staffed window operate in parallel; QR is never mandatory.
S04 Transit Companion Point Color, ground texture, and human guidance connect station exits, corners, and public space.	S05 Civic Repair Bell Residents report faults through a physical pull, phone, or staffed desk.	S06 Breathing Thermal-Comfort Canopy Shade, mist, and ventilation respond to environmental sensing with manual controls retained.
S07 INDUSTRY TEST Shared-Path Robotics Test Yard Low-speed robots test yielding, docking, and incident handling within tactile edges and human observation.	S08 INDUSTRY TEST Embodied Accessibility Lab Co-tests handrails, voice, touch, and robotic assistance with disabled participants; screen scores never replace lived experience.	S09 INDUSTRY TEST Edge Model Inspection Bench Physical samples and public test cards expose energy use, bias, and failure modes of edge models.
S10 Open-Source Translation Gallery Model cards, code contributions, and risk notes become tactile models, printed cards, and live explanation.	S11 Health-Education-Legal Inquiry Table AI navigates public information only; staff handle interpretation, referral, and high-risk cases.	S12 Beyond-the-Screen Urban Week Physical badges, public tables, walking routes, and live dialogue structure an annual open event.

Implementation, Risk, and Source Boundary

Phasing	Operations	Highest Risk
0-2 years: lightweight interfaces and staffed service 2-5 years: spine continuity After official controls: district renewal and long-term governance	Weekly staffed service Monthly repair publication Quarterly open testing Annual public review	Screens, accounts, cameras, and automated decisions can convert difference into exclusion. Dual-channel equivalence, exit rights, and human review are mandatory.

This package claims no official redline, statutory control, approval, engineering feasibility, investment commitment, or government endorsement.
