

# THE JING-ZHANG GAUGE: Fit the Gauge, Join the Line

Centennial Jing-Zhang AI Innovation Belt open call

## 1. Overall concept

The railway 'structure gauge' is translated into an on-line protocol for urban AI: every service must fit the city's clearance envelope (data minimization, accessibility, quietness, heritage protection) before joining the line. One belt, one spine, three gates: the heritage-park spine is the G0 quiet datum; G1 controlled zones cover the Origin Community and western living belt; G2 open test zones cover Dazhongsi and Zhongzhiyuan; six gauge gates are the test points; an out-of-gauge depot sits at Dazhongsi.

## 2. Spatial structure

One spine, two belts, four districts, many gates. The  $\approx 9.7$  km spine greenway threads the belt; a western living belt and an eastern innovation belt; four districts for retail, community life, innovation and reserve; six gates along the line.

## 3. Key areas

Zhongzhiyuan (192.9 ha): open compute center, developer village, embodied-AI hall, annual Recalibration Ring; AI Origin Community (104.3 ha): Origin Hall, Maker Works, talent housing, community AI station, Gauge Square; Dazhongsi (72.0 ha): smart-native commerce hall, Coupler Standards Hall, trade-port towers, out-of-gauge depot.

## 4. Delivery & operations

Three independently pausable packages: P1 southern spine & Gate Zero (2026 – 2028), P2 origin sandbox (2028 – 2030), P3 Zhongzhiyuan full-speed belt (2030 – 2035). Annual events: Gauge Day (June white paper), Opening Festival (September), Switch-House Workshops (quarterly), Jing-Zhang AI Marathon (winter).

## 5. Metrics & boundaries

Site  $11,412,825\text{ m}^2$  · green ratio 13.31% · public-space ratio 1.30% · footprint  $237,503\text{ m}^2$  · conceptual GFA  $1,233,000\text{ m}^2$  (non-statutory). FAR & height pending official controls. All metrics recomputed from this package's geometry in EPSG:4548.
