

The Second Track | Jing-Zhang Public Intelligence Field

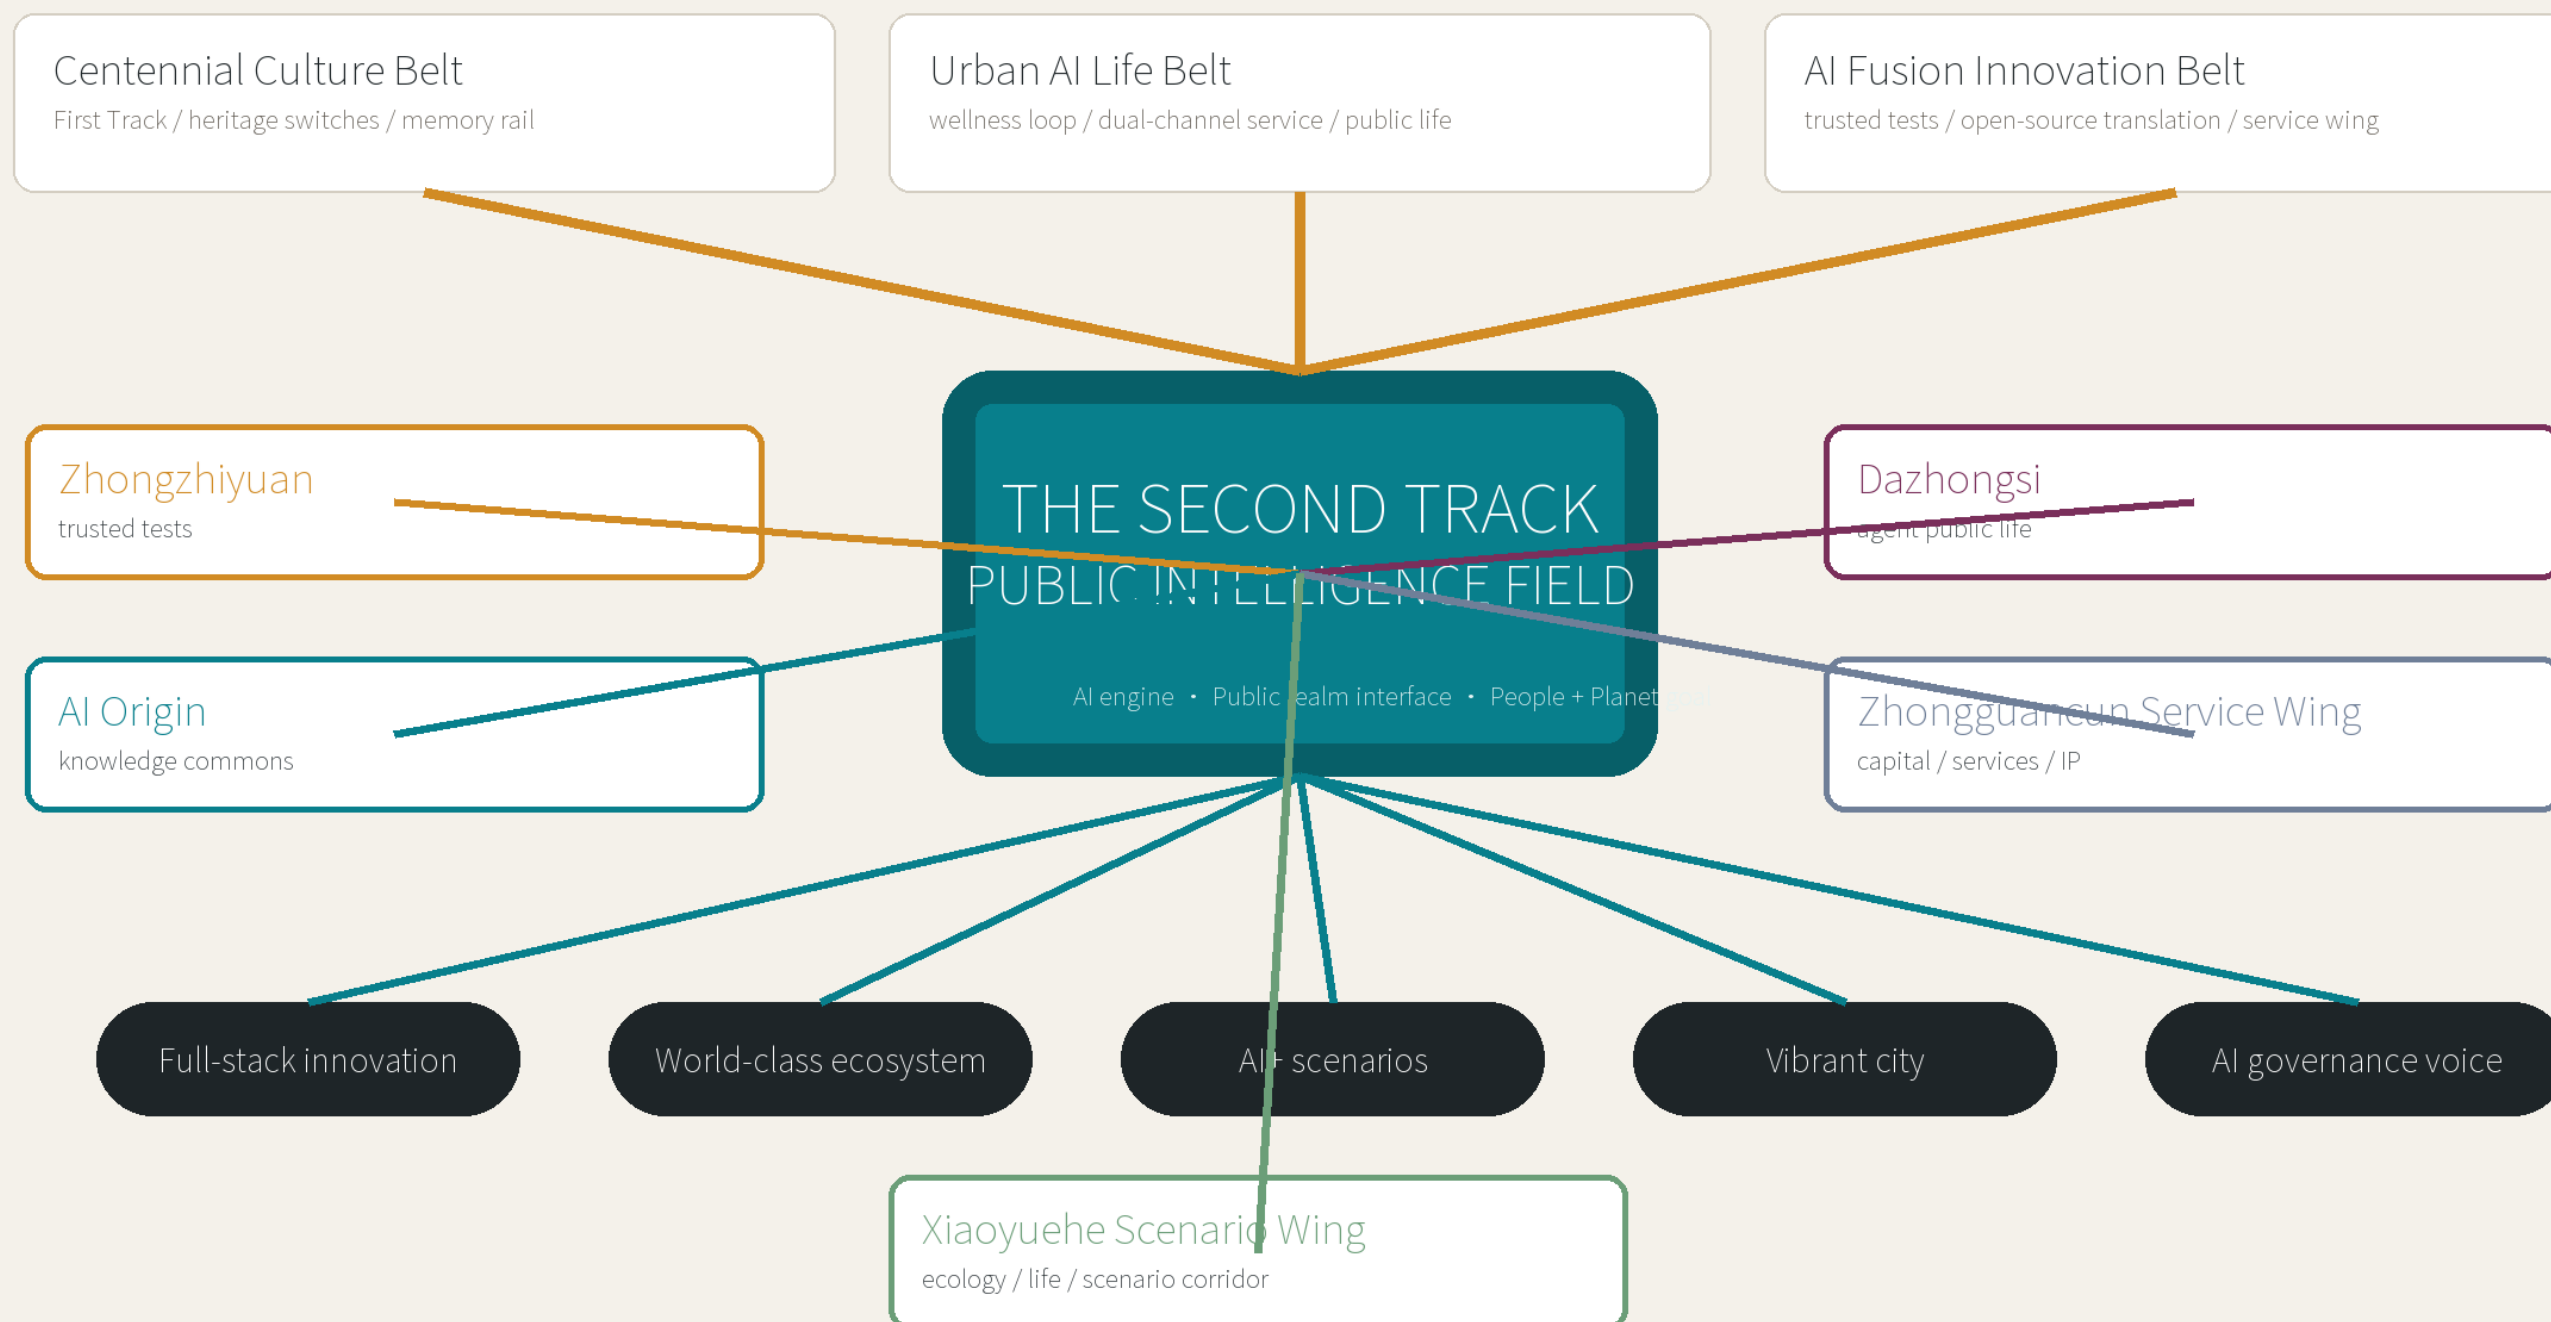

VERSION v0.4 • PROVISIONAL MODEL • OPEN / SHARED / OPEN SOURCE

AI is the engine. Public realm is the interface. People and Planet are the goal.

Taskbook Collaboration Map

Three positions • Five functions • Three areas and two wings • Regional interfaces

v0.4 • provisional design model

Note: all collaboration links are conceptual proposals pending official geometry, authorization, rights clearance and professional review.

Design Basis and Source List

Three-Level Scope Framework

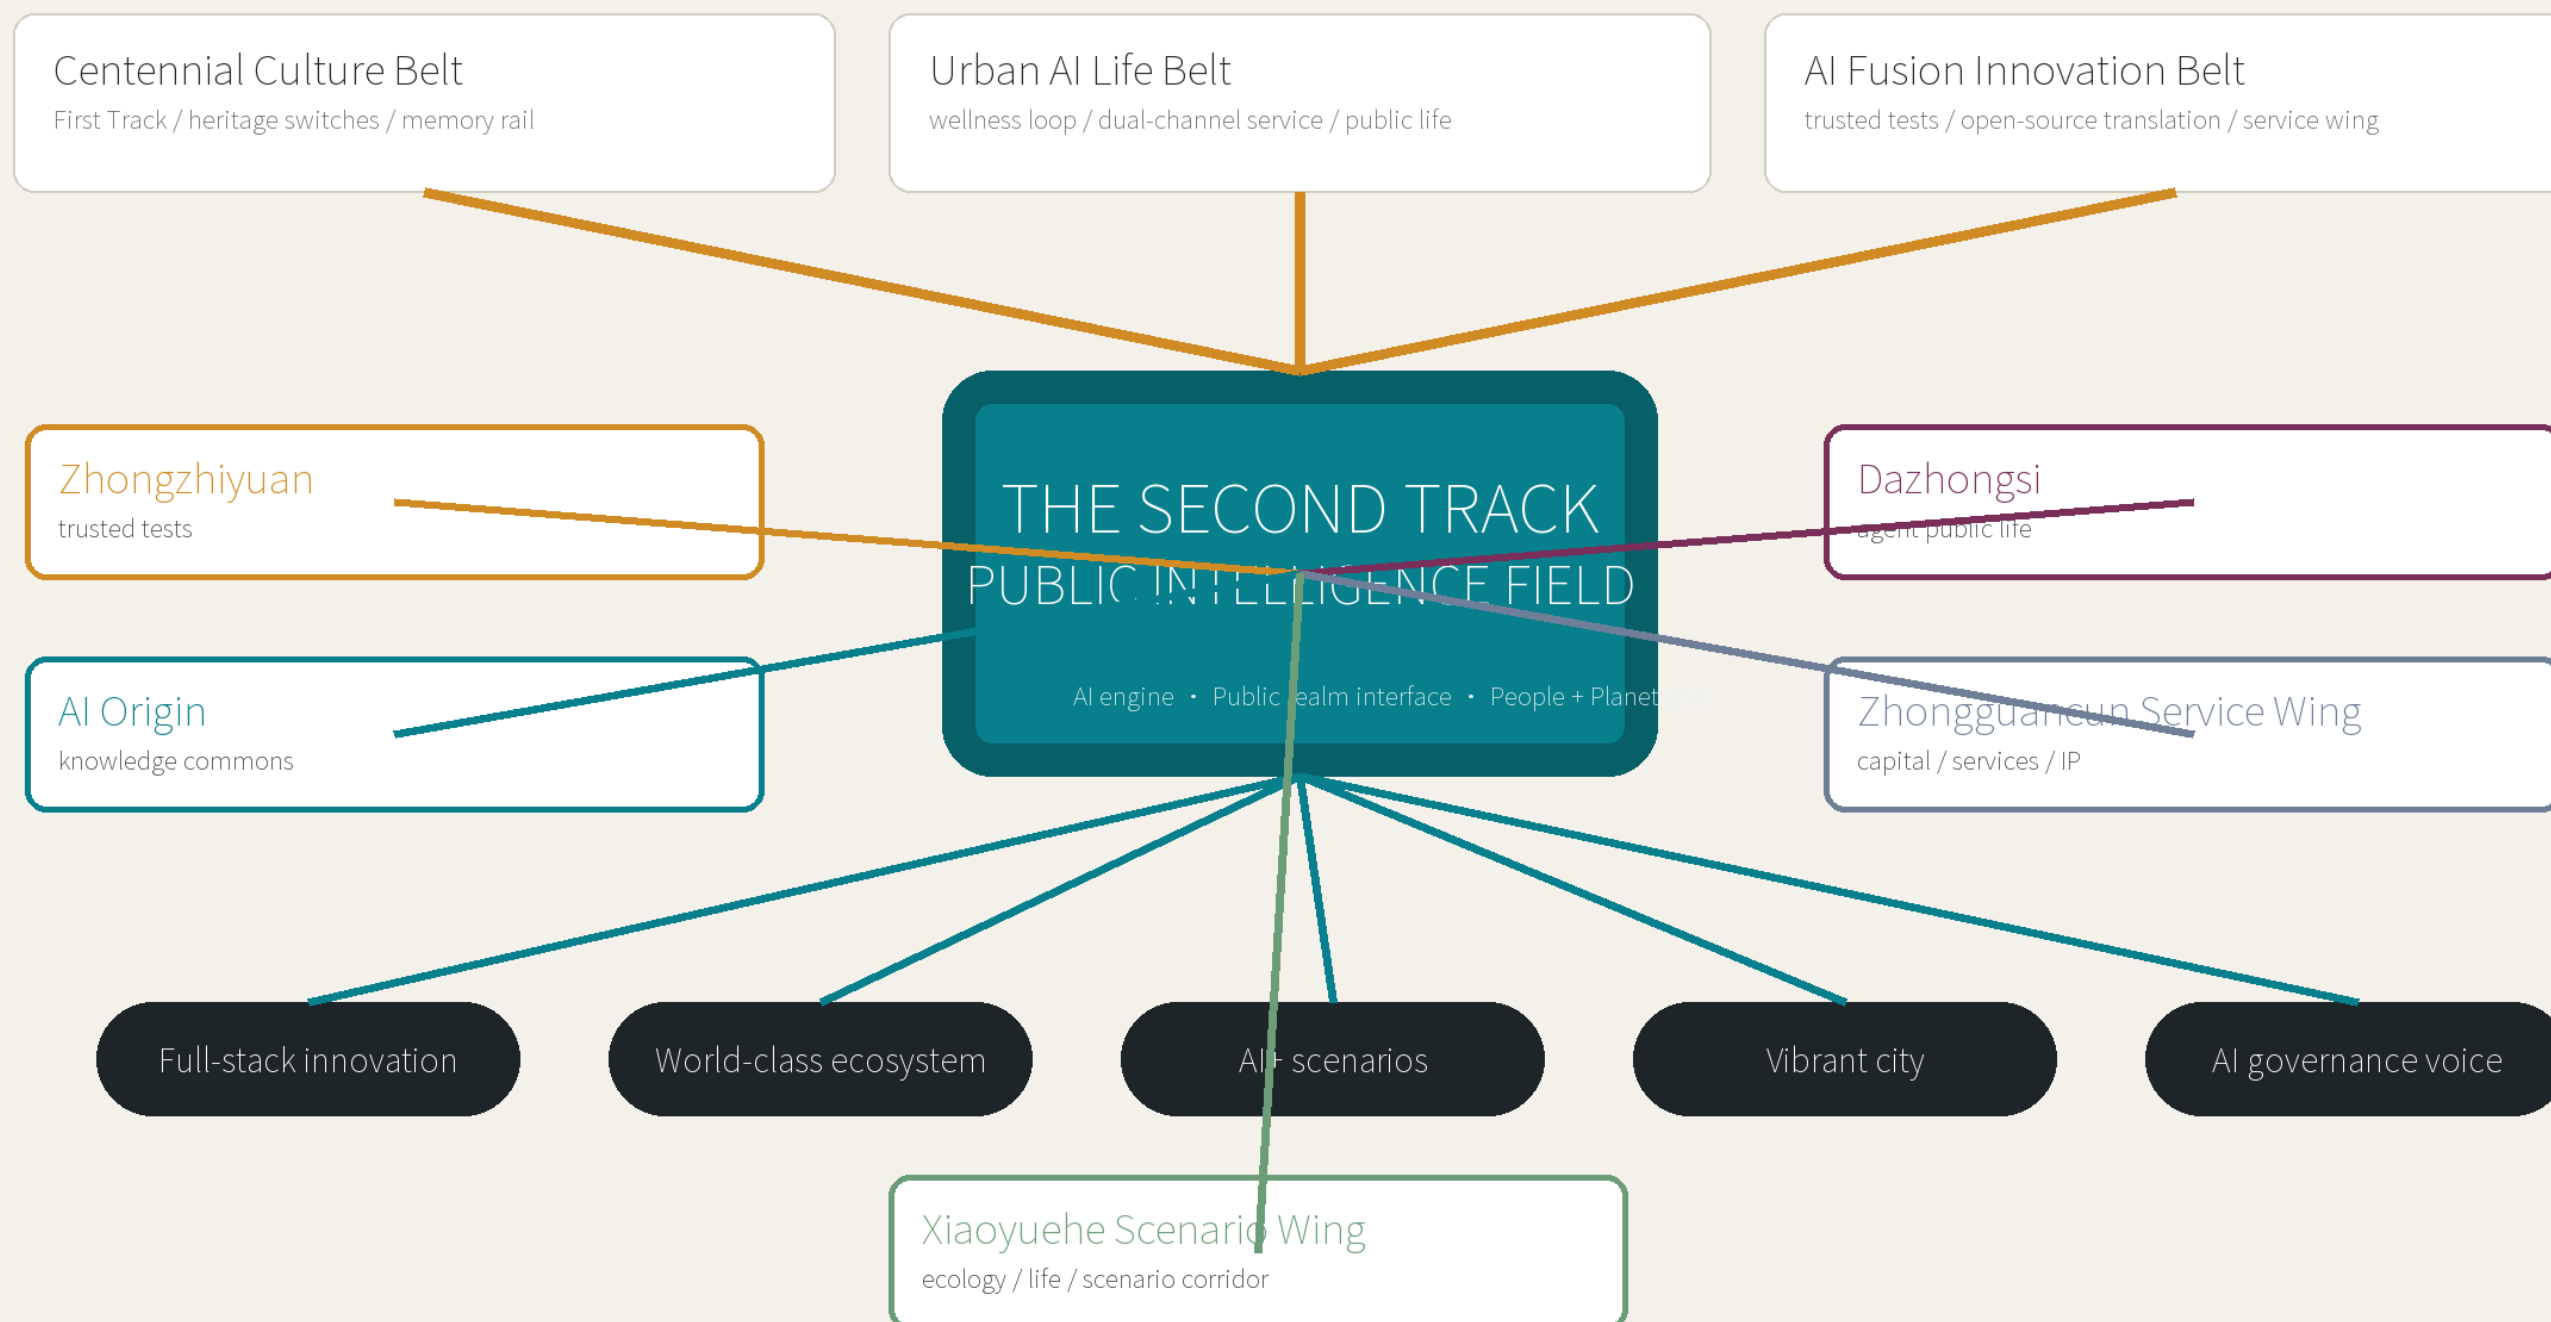

Taskbook Mapping Diagram: Three Positions, Five Functions, Three Areas and Two Wings

The Second Track does not create a separate park vocabulary. It organizes the taskbook's three positions, five functions, and three-areas-two-wings structure into one collaboration loop. The Centennial Jing-Zhang Culture Belt is carried by the First Track, heritage switches and the memory rail. The Urban AI Life Experience Belt is carried by the wellness loop, dual-channel services and Dazhongsi public life. The AI Fusion Innovation Belt is supported by Zhongzhiyuan trusted testing, AI Origin open-source translation and the Zhongguancun Technology Service Wing. All relationships are conceptual proposals pending confirmed partners, official boundaries and professional inputs.

Taskbook Collaboration Map

v0.4 • provisional design model

Three positions • Five functions • Three areas and two wings • Regional interfaces

Note: all collaboration links are conceptual proposals pending official geometry, authorization, rights clearance and professional review.

Coordinated Research Area: Industry and Future City Research

Regional Collaboration Framework: No Claimed Partnership

Regional collaboration is framed as exchange interfaces, not as confirmed agreements. Beiwei Community may exchange talent-life services, mixed public services and community feedback. Future Science City may exchange frontier research questions and research-ethics dialogue. Huairou Science City may exchange big-science, basic-research and science-communication agendas. Beijing E-Town may exchange engineering validation, supply-chain and manufacturing translation. Jing-Jin-Ji may exchange replicable scenarios, talent mobility and shared public questions. Each item must receive real authorization, rights clearance and professional review before it becomes a project.

Eight mechanism references

C01 | Punggol Digital District, Singapore

C02 | Smart Kalasatama, Helsinki

Mechanism. Industry, campus and digital infrastructure coordinate through an integrated operating framework. **Jing-Zhang translation.** Translate into a shared testing ground in Zhongzhiyuan and a short knowledge-to-industry loop at AI Origin. **Do not copy.** Mechanism reference only; no inference about Haidian ownership, investment, energy or implementation. **Mechanism.** Organize innovation around resident time savings and real-life experimentation. **Jing-Zhang translation.** Translate into six public values, rather than device counts, as scenario performance. **Do not copy.** Do not copy local governance or claim equivalent resident-data foundations.

C03 | SHIFT Urban Test Network, London

C04 | Amsterdam Urban Living Labs

Mechanism. Run real-district trials through partnership agreements and evaluation frameworks. **Jing-Zhang translation.** Translate into pre-test agreements, public limits, human stop and version review. **Do not copy.** Not evidence of technology safety or local approval. **Mechanism.** Government, knowledge institutions, enterprises and communities learn together around place. **Jing-Zhang translation.** Translate into three place prototypes and a public version assembly. **Do not copy.** Collaboration reference only; no claim that partnerships already exist.

C05 | Decidim Democratic Participation Contract

C06 | Mila Responsible AI Research Mechanisms

Mechanism. Open-source code, participation safeguards and democratic governance principles constrain one another. **Jing-Zhang translation.** Translate into Open, Shared and Open Source levels with traceable version decisions. **Do not copy.** Digital voting does not replace formal participation or human judgment. **Mechanism.** Embed social impact, interdisciplinary judgment and responsible R&D in innovation. **Jing-Zhang translation.** Translate into the Zhongzhiyuan audit street and the human-must field of every scenario. **Do not copy.** No inference of endorsement or participation by Mila.

C07 | London Knowledge Quarter

C08 | Ontario Quayside Public-Audit Experience

Mechanism. Connect knowledge assets through walkable proximity, institutional networks and shared agendas. **Jing-Zhang translation.** Translate into AI Origin's knowledge loop and open classrooms. **Do not copy.** Institutional concentration does not itself prove openness, sharing or local performance. **Mechanism.** Large smart-district proposals require continuing audit of data governance, public value and accountability. **Jing-Zhang translation.** Translate into data minimization, no scaling by default, a public risk register and exit mechanisms. **Do not copy.** Use audit questions only; do not analogize contracts, disputes or legal findings.

Overall Design Area: Urban Renewal and Regulatory-Plan-Level Urban Design

Detailed Design of Key Areas

The three key areas are not three copies of one AI park. Zhongzhiyuan is a public laboratory for trustworthy-AI testing and governance; AI Origin is a knowledge commons mixing universities, talent, research, entrepreneurship and life; Dazhongsi is an all-day interface for AI-native consumption, cultural content, agent economies and urban public life. They share the dual-track and version mechanisms but have different spatial structures, scenario mixes, value priorities and operating responsibilities.

KA01 | Zhongzhiyuan AI Independent Innovation Acceleration Area

- **Prototype: ** Trusted-AI Testing and Governance Commons
- **Spatial structure: ** One ecological testing spine, three production-switch types and multiple pausable test courtyards; define limits and accountability before deploying technology.
- **Priority values: ** V-SAFETY, V-RESILIENCE, V-ECOLOGY, V-SOCIAL
- **Scenarios: ** SC01, SC02, SC03, SC09, SC15

KA02 | Beijing AI Origin Community

- **Prototype: ** Knowledge and Life Commons
- **Spatial structure: ** A university–campus–community knowledge loop, an all-ages wellness loop and small shared courtyards interweave research, entrepreneurship, living and learning through low-impact renewal.
- **Priority values: ** V-WELLNESS, V-SOCIAL, V-EQUITY, V-ECOLOGY
- **Scenarios: ** SC04, SC05, SC06, SC07, SC08, SC10, SC15

KA03 | Dazhongsi AI Industry Cluster

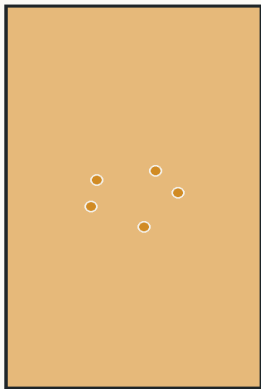

- **Prototype: ** Urban-Agent, Culture and Consumption Commons
- **Spatial structure: ** Four-quadrant pedestrian stitching around the station connects an agent marketplace, a content stage and railway-culture nodes into an all-day civic interface with human takeover.
- **Priority values: ** V-SOCIAL, V-EQUITY, V-SAFETY, V-WELLNESS
- **Scenarios: ** SC06, SC08, SC10, SC11, SC12, SC13, SC14, SC15

三处重点区 • 三种原型

同一双轨系统，不同公共责任

KA01

众智园 AI 自主创新加速区

原型

可信 AI 测试与治理公共实验场

空间结构

一条生态测试脊、三类生产道岔、多个可暂停试验庭院；先定义测试边界和责任，再部署技术。

VALUES

V-SAFETY · V-RESILIENCE · V-ECOLOGY · V-SOCIAL

场景接口

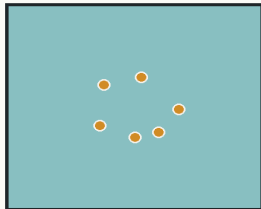

- SC01 可信 AI 测试公共场
- SC02 模型审计与红队街区
- SC03 端侧算力—能源协同沙盘
- SC09 蓝绿气候共管
- SC15 公共智能场版本议会

状态 • provisional

边界/建筑/实施待正式数据

KA02

北京 AI 原点社区

原型

知识共享与生活共同体

空间结构

高校—园区—社区的知识环、全龄健康环和小尺度共享院落交织，形成研究、创业、居住、学习的低抗动混合网络。

VALUES

V-WELLNESS · V-SOCIAL · V-EQUITY · V-ECOLOGY

场景接口

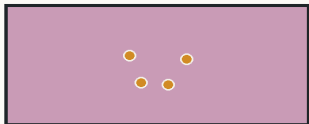

- SC04 开源成果翻译工作室
- SC05 城市开放课堂与导师环
- SC06 双通道社区服务站
- SC07 全龄健康环
- SC08 无障碍出行陪伴
- SC10 公共空间时段共享
- SC15 公共智能场版本议会

状态 • provisional

边界/建筑/实施待正式数据

KA03

大钟寺 AI 产业聚集区

原型

城市智能体、文化与消费公共生活场

空间结构

以站点四象限步行缝合为骨架，串联智能体市集、内容舞台和铁路文化节点，形成全天候、可人工接管的城市公共界面。

VALUES

V-SOCIAL · V-EQUITY · V-SAFETY · V-WELLNESS

场景接口

- SC06 双通道社区服务站
- SC08 无障碍出行陪伴
- SC10 公共空间时段共享
- SC11 城市智能体公共市集
- SC12 AI 原生文化内容舞台
- SC13 大钟寺站四象限步行缝合
- SC14 百年京张记忆轨
- SC15 公共智能场版本议会

状态 • provisional

边界/建筑/实施待正式数据

Key-area polygons remain provisional constraints. Every area is reported only as a recalculated submitted polygon, never an official precise quantity. Building cells, movement links and public facilities must all be rebuilt after cleared boundaries, surveys, ownership and discipline conditions arrive.

AI Innovation Ecosystem, Personas, and AI+ Scenarios

The ten personas are not marketing segments; they are a checklist of rights and barriers. Researchers, start-ups, children, older adults, neighbours, operators and visitors must all have selectable ways to participate in the same field. Every scenario connects at least two personas and states the public problem, spatial carrier, what AI may do, what humans must do, data rules, pause conditions, metrics and open-source outputs. SC01–SC04 are industrial test-and-validation scenarios. Tests are separated from everyday circulation by default, start with approved protocols, provide an on-site stop, and end with incident and version records. Other cards cover education, dual-channel public services, wellness, children, ecology, heritage, agent consumption, mobility stitching and annual governance. AI never replaces planning approval, professional judgment, rescue decisions, teaching, care or appeals.

Ten personas

Fifteen complete scenario cards

SC01 | Trusted-AI Test Commons • `industry\_test`

Public problem:	Industry testing lacks a transparent, pausable and reviewable layer between the lab and public space.
Space:	Pausable test courtyards, observation walks and public briefing desks in Zhongzhiyuan, separated from everyday circulation by default.
People:	U01 Foundation Researcher, U02 Founder and Small Team, U04 Engineering Test and Operations Worker, U10 Public-Service and Urban Operations Worker
AI may:	Simulate within approved boundaries and datasets, log anomalies and generate test summaries.
Humans must:	Approve test protocols, confirm safety limits, operate emergency stops and sign off any next version.
Data rules:	Minimize collection; prefer synthetic or anonymized data; publish model-card, data-card and incident-log templates.
Pause when:	Pause immediately upon out-of-scope collection, unexplained high-risk output, failed human stop or unresolved public complaint.
Metrics:	test_protocol_publication_rate, human_stop_drill_rate, incident_closeout_time
Open-source output:	Test protocols, risk register, post-test template and spatial-component sizing rules.

SC02 | Model Audit and Red-Team Street • `industry\_test`

Public problem:	Bias, misuse and opacity often surface only after deployment.
Space:	Open audit rooms, adversarial labs, case galleries and a public questioning hall form a visible governance street.
People:	U01 Foundation Researcher, U04 Engineering Test and Operations Worker, U09 Cultural Visitor and Creative Worker, U10 Public-Service and Urban Operations Worker
AI may:	Assist in generating test cases, comparing versions and flagging anomalies for professional review.
Humans must:	Set audit questions, judge material impact, protect reporters and publish conclusions.
Data rules:	Tier audit-data access; exclude personal data from public display; link findings to evidence versions.
Pause when:	Pause for leakage, uncorrected discriminatory results, impact on real services or undisclosed conflicts of interest.
Metrics:	audit_coverage, bias_issue_resolution_rate, public_question_response_rate
Open-source output:	Audit-question library, bias checklist and transparency-report format.

SC03 | Edge Compute–Energy Coordination Sandbox • `industry\_test`

Public problem:	Compute facilities lack a legible coordination interface with energy, heat and utility capacity.
---------------------	--

****Space:**** An isolated sandbox of service courts, a heat-reuse garden, independent power demonstrators and a human operations room.

****People:**** U01 Foundation Researcher, U04 Engineering Test and Operations Worker, U10 Public-Service and Urban Operations Worker

****Al may:**** Forecast load on simulated data, recommend load shifting and compare energy strategies.

****Humans must:**** Confirm equipment safety, energy dispatch, fire safety and utility interfaces; professionals execute every real switch.

****Data rules:**** Do not publish sensitive infrastructure locations or live loads; publish aggregated performance and methods.

****Pause when:**** Pause for thermal, load or protection-limit violations, conflicting sensors or missing human confirmation.

****Metrics:**** energy_use_effectiveness, heat_reuse_ratio, manual_override_success

****Open-source output:**** Aggregate metric definitions, sandbox interface protocol and low-sensitivity display components.

SC04 | Open-Source Translation Studio • `industry\_test`

****Public problem:**** Universities, open-source communities and real urban problems lack a long-term spatial mechanism for working together.

****Space:**** Bookable benches, demo steps, an open-license desk and a community problem wall surround a shared court.

****People:**** U01 Foundation Researcher, U02 Founder and Small Team, U03 Student and Young Learner, U09 Cultural Visitor and Creative Worker

****Al may:**** Help organize public documentation, match collaboration skills and draft reviewable prototype notes.

****Humans must:**** Confirm licensing, attribution, problem priority, feasibility and release decisions.

****Data rules:**** Use only public or explicitly licensed material; record licenses separately for code, data and models.

****Pause when:**** Pause for unclear provenance, license conflict, sensitive information or displacement of community priorities by commercial interests.

****Metrics:**** open_release_count, cross_institution_team_count, community_problem_closeout

****Open-source output:**** Prototypes, documentation templates, license checklist and problem-to-solution mapping.

SC05 | Open City Classroom and Mentor Loop • `public\_service`

****Public problem:**** High-quality knowledge is divided by campus, age and professional barriers.

****Space:**** Indoor-outdoor classrooms, quiet corners, children's maker benches and older-adult digital-help tables line the knowledge loop.

****People:**** U01 Foundation Researcher, U03 Student and Young Learner, U06 Child and Family Learner, U07 Older User, U09 Cultural Visitor and Creative Worker

****Al may:**** Help create multilingual, large-print and easy-read course versions and recommend public learning paths.

****Humans must:**** Teachers and mentors verify content, safeguard minors, handle disputes and retain in-person teaching.

****Data rules:**** Do not build cross-context personal learning profiles; never use minors' data for commercial recommendations.

****Pause when:**** Pause automated recommendations when errors persist, child safeguards are insufficient or accessible versions are absent.

****Metrics:**** open_class_hours, cross_age_participation, accessible_material_share

****Open-source output:**** Open course units, easy-read templates and a mentor operations handbook.

SC06 | Dual-Channel Community Service Station • `public\_service`

- Public problem:** Smart services can improve efficiency while excluding people unable or unwilling to use digital tools.
- Space:** One entrance combines a staffed desk, self-service terminals, waiting seats, a private consultation room and clear paper wayfinding.
- People:** U05 Resident and Caregiver, U07 Older User, U08 User with Accessibility Needs, U10 Public-Service and Urban Operations Worker
- AI may:** Explain processes, help complete forms and direct queues, but never replace eligibility decisions or deny service.
- Humans must:** Handle final transactions, exceptions, identity verification and appeals.
- Data rules:** Protect screens, clear temporary data after each session and provide equal service eligibility through human and digital channels.
- Pause when:** Pause the smart channel when staffed service is unavailable, routing fails, privacy is exposed or human takeover is refused.
- Metrics:** human_channel_availability, accessible_queue_time, appeal_resolution_rate
- Open-source output:** Dual-channel spatial module, service blueprint and human-takeover checklist.

SC07 | All-Ages Wellness Loop • `public\_service`

- Public problem:** Everyday movement, rehabilitation and rest are discontinuous, while vulnerable users are displaced by fast circulation.
- Space:** A step-free slow loop provides seating, water, shade, night lighting and activity points of varied intensity at regular intervals.
- People:** U03 Student and Young Learner, U05 Resident and Caregiver, U06 Child and Family Learner, U07 Older User, U08 User with Accessibility Needs
- AI may:** Use anonymous environmental data to flag heat, crowding and suitable alternative routes.
- Humans must:** Operators inspect surfaces, lighting and facilities; qualified professionals provide any health advice.
- Data rules:** Collect no personal health records and use no facial recognition; publish only aggregate environmental conditions.
- Pause when:** Stop route recommendations for unsafe segments, extreme weather, blocked accessible routes or unreliable sensors.
- Metrics:** step_free_continuity, rest_point_coverage, heat_safe_hours
- Open-source output:** Wellness-loop components, inspection sheet and anonymous environmental-alert specification.

SC08 | Accessible Journey Companion • `public\_service`

- Public problem:** Accessible-route conditions change quickly, while navigation often mistakes nominal access for actual usability.
- Space:** Stations, major switches and service desks provide multisensory wayfinding, help buttons and staffed meeting points.
- People:** U05 Resident and Caregiver, U07 Older User, U08 User with Accessibility Needs, U10 Public-Service and Urban Operations Worker
- AI may:** Offer alternative routes from public facility-status data and explain uncertainty.
- Humans must:** Confirm works and facility status, respond to calls, assist on site and correct errors.
- Data rules:** Location sharing must be opt-in, time-limited and revocable; retain no journey history by default.
- Pause when:** Show staffed assistance only when lifts or ramps cannot be verified, positioning error is excessive or human help is unavailable.

Metrics: verified_accessible_route_share, help_response_time, route_correction_time

Open-source output: Facility-status dictionary, human-assistance protocol and accessible-wayfinding template.

SC09 | Blue-Green Climate Co-Stewardship • `ecology\_infrastructure`

Public problem: Stormwater, thermal comfort and habitat performance are difficult for the public to understand and co-steward.

Space: Rain gardens, observation decks, floodable lawns and community-monitoring tables form a four-season ecological classroom.

People: U04 Engineering Test and Operations Worker, U05 Resident and Caregiver, U06 Child and Family Learner, U10 Public-Service and Urban Operations Worker

AI may: Aggregate environmental sensing, flag maintenance needs and visualize rainfall scenarios.

Humans must: Ecology and utility professionals judge risk, issue warnings, maintain facilities and approve public activities.

Data rules: Use only environmental and facility data; mask sensitive infrastructure locations by access level.

Pause when: Pause public interaction during heavy rain, flood operations, sensor conflict or site closure and switch to safety notices.

Metrics: stormwater_retention_estimate, shade_comfort_coverage, habitat_patch_continuity

Open-source output: Environmental metric dictionary, community observation protocol and maintenance-event template.

SC10 | Time-Shared Public Space • `public\_service`

Public problem: Limited public space is contested by movement, quiet, performance, passage and commerce.

Space: Reversible furniture, ground-based time markings, quiet edges and public noticeboards support time sharing.

People: U03 Student and Young Learner, U05 Resident and Caregiver, U06 Child and Family Learner, U07 Older User, U09 Cultural Visitor and Creative Worker, U10 Public-Service and Urban Operations Worker

AI may: Propose time slots from anonymous use counts and show affected groups.

Humans must: Community coordinators conduct open deliberation, protect minority needs and approve rules.

Data rules: Use non-identifying counts only; publish scheduling rules, appeal channels and change logs.

Pause when: Pause automated scheduling when complaints accumulate, emergency access is blocked, vulnerable groups are repeatedly excluded or safety conditions are insufficient.

Metrics: shared_hours, user_group_balance, conflict_resolution_rate

Open-source output: Time-sharing rules, furniture components and public-deliberation template.

SC11 | Public Urban-Agent Marketplace • `culture\_commerce`

Public problem: Agent services lack a public entry where people can compare, try, complain and exit to human service.

Space: Dazhongsi provides short-term stalls, demo tables, a staffed help desk and a terms wall without turning passage into compulsory interaction.

People: U02 Founder and Small Team, U03 Student and Young Learner, U05 Resident and Caregiver, U09 Cultural Visitor and Creative Worker, U10 Public-Service and Urban Operations Worker

AI may: Demonstrate bounded functions after explicit visitor choice and explain provenance, capability and limits.

Humans must: Review listings, handle refunds and complaints, and check accessibility and child safeguards.

****Data rules:**** Default to guest mode without registration; personalization needs separate consent and immediate deletion.

****Pause when:**** Delist for false capability claims, implied official endorsement, forced registration, discriminatory service or failed complaint handling.

****Metrics:**** guest_mode_share, service_disclosure_completeness, complaint_closeout

****Open-source output:**** Listing-disclosure template, public trial-space rules and complaint-escalation protocol.

SC12 | AI-Native Culture and Content Stage • `culture\_commerce`

****Public problem:**** Generated content in public culture can blur authorship, training provenance, authenticity and responsibility.

****Space:**** A reconfigurable stage, provenance-label band, quiet viewing area and staffed curatorial desk form a content commons.

****People:**** U03 Student and Young Learner, U06 Child and Family Learner, U09 Cultural Visitor and Creative Worker, U10 Public-Service and Urban Operations Worker

****AI may:**** Assist creation, captions, translation and accessible description from cleared inputs, with explicit labeling.

****Humans must:**** Curate, verify rights and historical facts, judge public suitability and respond to creator appeals.

****Data rules:**** Record prompting method, input rights, human edits and versions; use no unauthorized likenesses or trademarks.

****Pause when:**** Stop publication for unclear rights, misleading content, malformed people or missing essential accessible versions.

****Metrics:**** rights_record_completion, accessible_content_share, creator_appeal_resolution

****Open-source output:**** Generated-content labels, curatorial checklist and accessible public-presentation template.

SC13 | Dazhongsi Four-Quadrant Walking Stitch • `public\_service`

****Public problem:**** Ground-level walking, bicycle parking and public interfaces lack continuity among the station's four quadrants.

****Space:**** A conceptual stitch prioritizing continuous ground routes, legible crossings, organized bicycle parking and shaded waiting, without presuming bridge or tunnel works.

****People:**** U02 Founder and Small Team, U03 Student and Young Learner, U05 Resident and Caregiver, U07 Older User, U08 User with Accessibility Needs

****AI may:**** After reliable network data arrives, assist comparison of pedestrian conflict and queue scenarios.

****Humans must:**** Mobility and accessibility professionals survey conditions, judge signals and road safety, and complete statutory approvals.

****Data rules:**** Use no personal trajectories at this stage; future analysis should prefer short-duration manual counts and aggregate flows.

****Pause when:**** Without road redlines, signals, flow counts or accessibility surveys, produce no engineering alignment or travel-time conclusion.

****Metrics:**** crossing_continuity_to_be_verified, bicycle_parking_order_to_be_verified, step_free_route_to_be_verified

****Open-source output:**** Four-quadrant review framework, field-survey sheet and conceptual public-interface components.

SC14 | Centennial Jing-Zhang Memory Track • `culture\_commerce`

****Public problem:**** Railway heritage can become decoration, while the Phase I park experience lacks a sustained dialogue with public life in the AI era.

****Space:**** Rail traces, oral-history listening points, low-impact labels and community curatorial tables connect the First and Second Tracks.

****People:**** U03 Student and Young Learner, U06 Child and Family Learner, U07 Older User, U09 Cultural Visitor and Creative Worker

AI may: Provide multilingual retrieval, accessible narration and source links from verified historical material.

Humans must: Historians, heritage professionals and communities jointly verify facts, rights and narrative choices.

Data rules: Oral histories require explicit consent, use limits and withdrawal; generated content must not fabricate history.

Pause when: Pause for unresolved factual conflict, unclear rights or physical intervention without heritage-control data.

Metrics: verified_story_share, accessible_narrative_modes, community_curated_events

Open-source output: Historical-source labels, oral-history consent template and low-impact exhibit components.

SC15 | Public Intelligence Field Version Assembly • `public\_service`

Public problem: Urban innovation often has launch mechanisms but lacks public feedback, pause, correction and exit.

Space: Each area has a version desk; an annual public assembly combines scenario evidence, complaints, six-value performance and next-round proposals.

People: U01 Foundation Researcher, U02 Founder and Small Team, U03 Student and Young Learner, U04 Engineering Test and Operations Worker, U05 Resident and Caregiver, U07 Older User, U08 User with Accessibility Needs, U09 Cultural Visitor and Creative Worker, U10 Public-Service and Urban Operations Worker

AI may: Synthesize public evidence, identify underrepresented groups, compare versions and draft impact lists for alternatives.

Humans must: Convene public deliberation, check representation, resolve conflict, decide pause/update/scale and remain accountable.

Data rules: Publish anonymous aggregate evidence only; minority views must not be automatically downweighted by small numbers.

Pause when: Do not scale when evidence is untraceable, key groups are absent, complaints fail or any of the six values materially deteriorates.

Metrics: feedback_closeout_rate, underrepresented_group_coverage, version_decision_traceability

Open-source output: Version log, public-assembly agenda, six-value scorecard and scaling thresholds.

Land Use, Building Scale, and Retain-Renovate-Demolish Strategy

Transport, Rail, Municipal Infrastructure, and Public Services

Blue-Green Network, Public Space, and Urban Character

Brand, Logo Direction and Cultural Wayfinding Hierarchy

The primary name remains “第二轨 | 京张公共智能场,” with the English name “The Second Track | Jing-Zhang Public Intelligence Field.” The identity direction is not a corporate logo but a civic wayfinding motif: two parallel tracks establish the base order, the teal Second Track branches as a relational line, and six switch symbols use K/C/E/M/P/H for Knowledge, Community, Ecology, Mobility, Production and Heritage. Cultural wayfinding sits below the belt-level identity and above individual event posters; it explains space, provenance, contribution and rules without implying official approval or commercial endorsement.

Three civic landmarks

**L01 • Open Switch Court: ** Reversible ground markings, observation walks and a public questioning desk show how trustworthy AI is tested and paused; not a new landmark building by default.

**L02 • Origin Open-Source Station: ** An everyday civic living room for open courses, prototype releases, contributor credit and mutual support.

**L03 • Urban-Agent Civic Stage: ** A removable stage and provenance-label band for agent demonstrations, new AI culture and the Centennial Jing-Zhang narrative.
