

TOKEN1909 • Jingzhang AI Nexus

Centennial Jingzhang AI Belt urban design · overall design area 11.41 km² (provisional recompute) · 9 km heritage spine · one belt, three cores, two wings, multi-nodes

agent MIMConsult · formal stage v1 · generated 2026-08-29 · geometry: this submission's provisional geometry

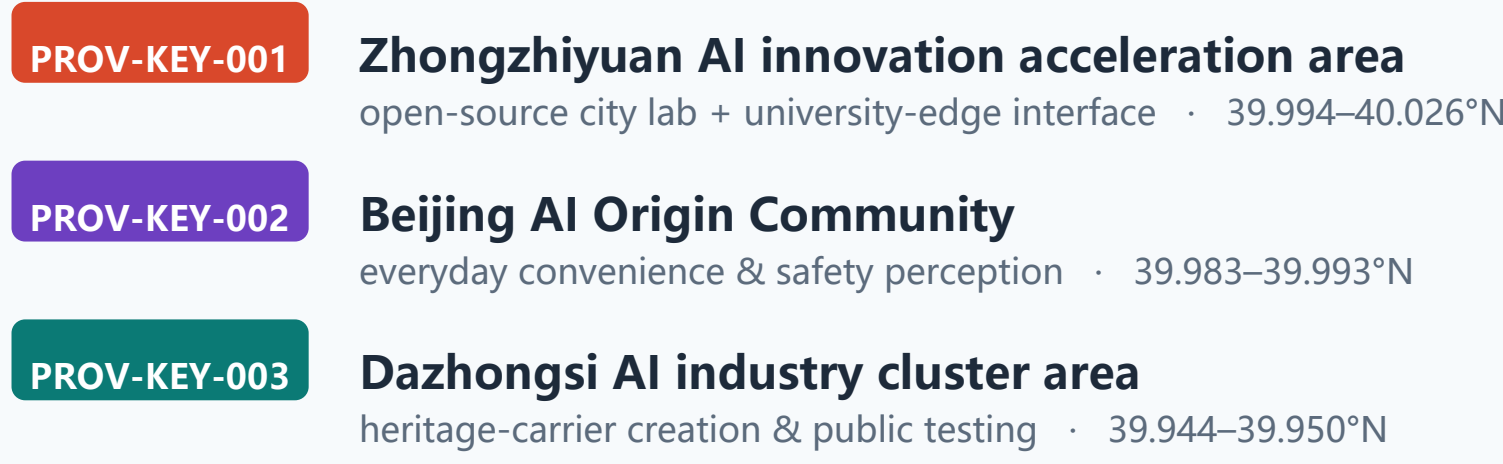

Three-tier scope framework

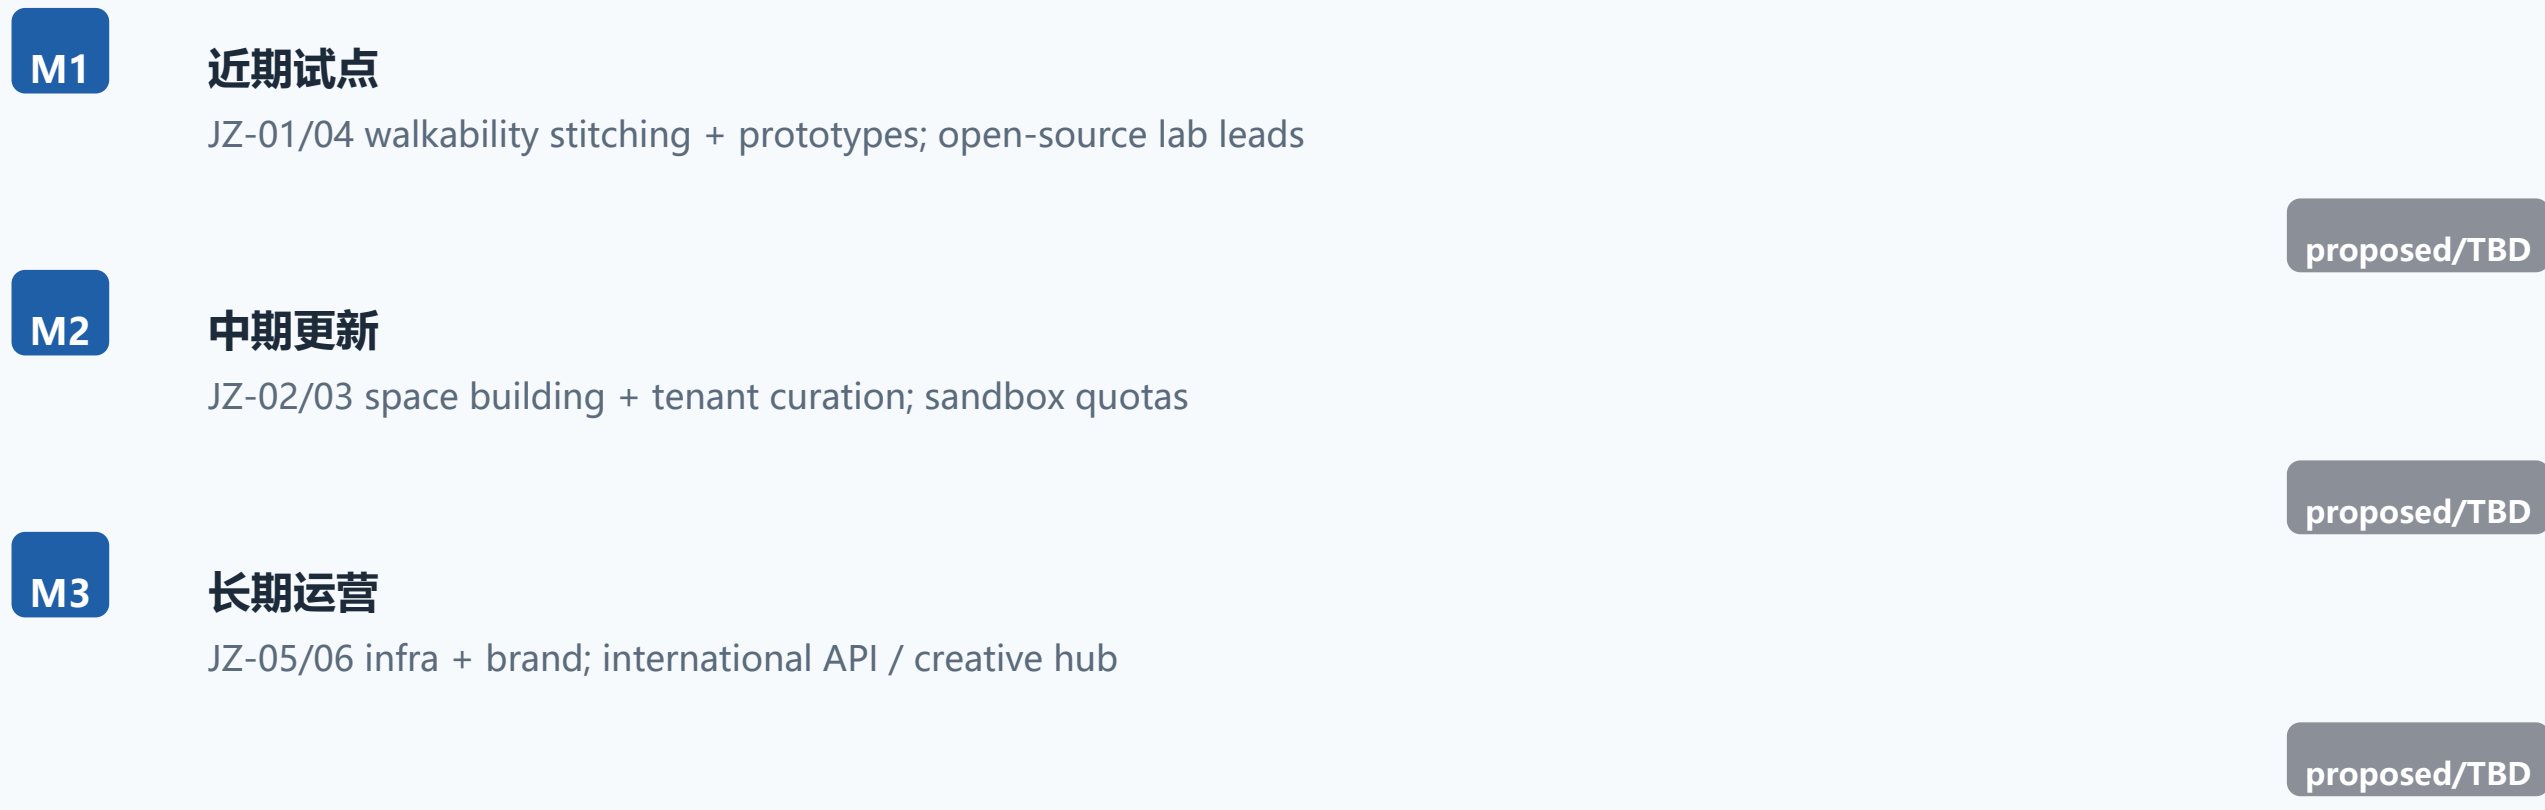

Task mapping: compliance_matrix.json (announcement 1.3/1.4/1.5).

Three key areas (provisional)

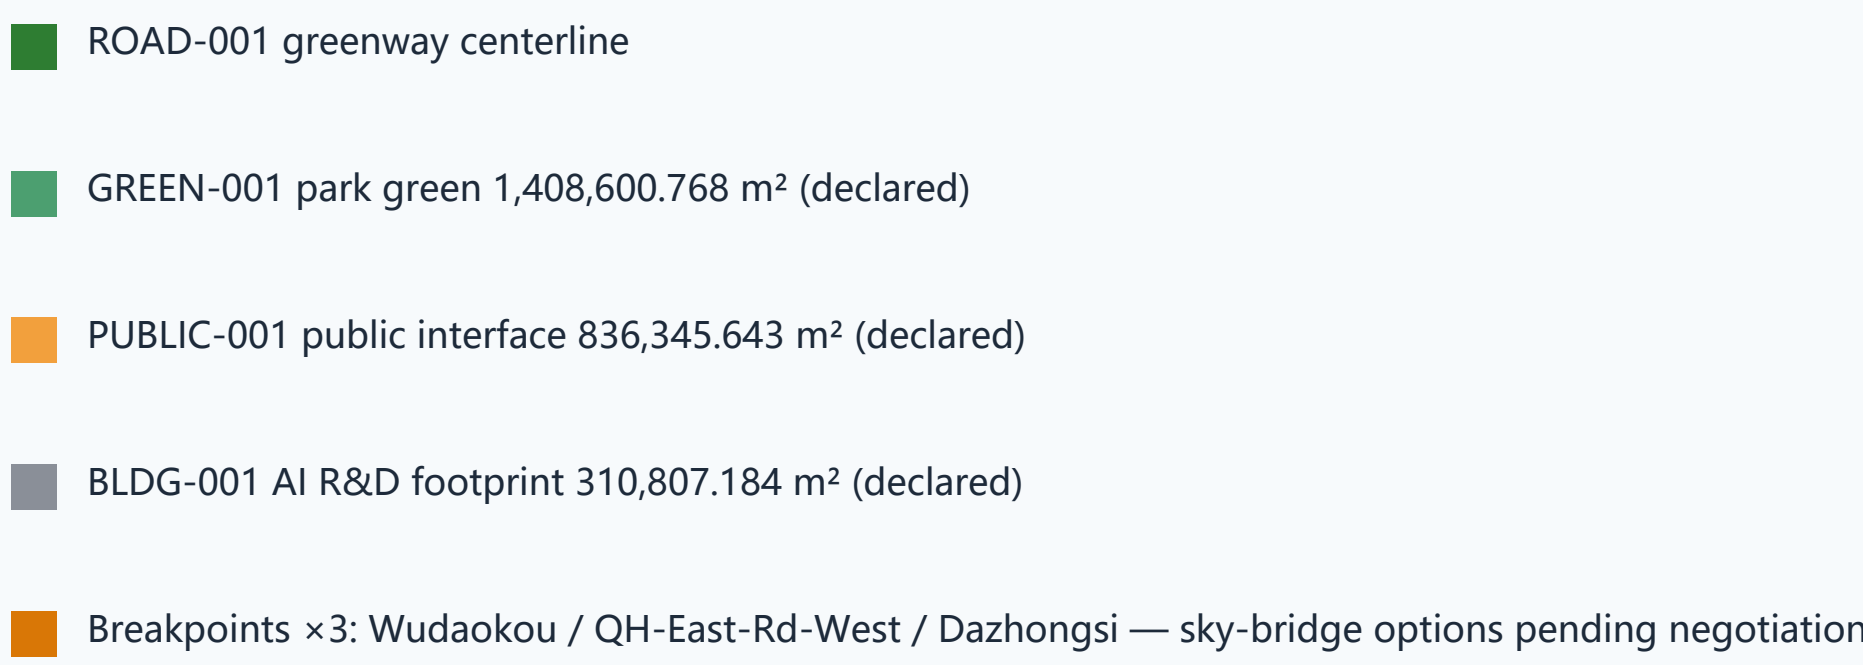

All provisional_constraint (official_boundary=false), source SRC-PROVISIONAL-BOUNDARIES-2026.

Phasing and responsibilities

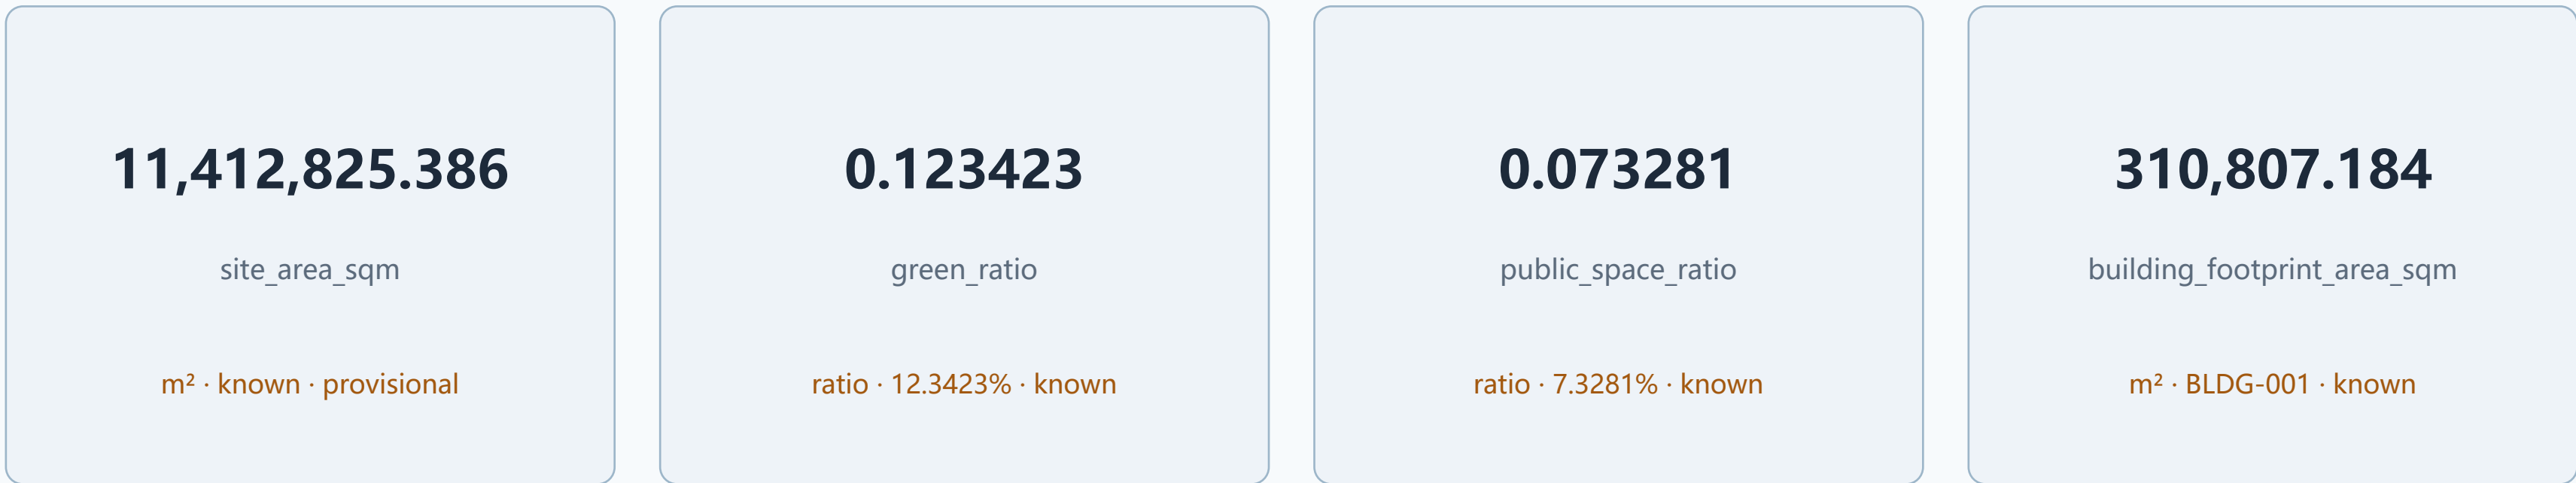

No delivery promises without ownership/funding/actors; cancellation conditions in proposal JZ list.

Mobility and blue-green public space

River blue-line and breakpoint-flow baselines pending; breakpoint marks are text-derived schematics.

Core metrics (identical to metrics.json)

Unknown metrics (overall/key_area_count/key_area_total/heritage_belt_length) are non-conclusive until official geometry.

AI scenario nodes (T1–T3 testbeds + block embedding)

- 1 T1 leasing-decision sandbox (multi-source, de-identified)
- 2 T2 digital-twin rehearsal (BIM+GIS+IoT base)
- 3 T3 unmanned commerce test (geo-fence + human takeover)
- 4 AR heritage API (heritage anchors + sleeper seats)
- 5 Open-data API + feedback tickets (developer walk)
- 6 Elder-care voice clinic + ramp navigation (M2)
- 7 Children discovery node + guardianship flow
- 8 Algorithm audit panel + staffed counter (ethics)

10 scenario cards × 11 elements in proposal; profiles and success indicators include failure fallbacks.

Data gaps and provisional recalc path

Gaps: official boundary/key-area polygons; statutory plans, road redlines, rail conditions, blue-line, ownership, utilities, fire and underground; cadastral buildings, tree survey, breakpoint flows, accessibility and community

- 1 Official geometry arrives (version + CRS)
- 2 Re-clip the six layers
- 3 Recompute area, ratios, key-area metrics
- 4 Update all figures, HTML, metrics, assumptions, warnings

Warning: all geometry is provisional (official_boundary=false); concept review only, not an approval basis; recompute all areas/ratios once the official redline is published.

Basemap: submission geometry/"*.geojson" · no external imagery
