

A City with Doors

Let human life remain continuous, and let personal AI move with the person across the city; public facilities are called by task and permission, and can be maintained, returned, and exited.

[Home](#) | [AI Origin Community](#)

Long-term living · learning · follow-up care · independent household thresholds

Window | Dazhongsi

36-hour visit · temporary access · permission withdrawal on departure

Workshop | Zhongzhiyuan

R&D · testing · repair · controlled collaboration

Jing-Zhang Public Spine

Connecting ordinary urban fabric and the three areas | public-body borrowing · fault recovery · migration with permission withdrawal

Site Overview | Three-Level Scope and Five Urban Networks

Concept proposal / provisional geometry / not for navigation or construction

THREE SCALES

43.6 km² strategy → 11.4 km² system translation → 368.4 ha local proofs

FIVE URBAN NETWORKS

movement · blue-green/public realm · staffed service · maintenance/logistics · energy/offline recovery

THREE KEY AREAS

testing/repair · everyday continuity · public translation

ONE GOVERNANCE CONTRACT

permission resets by place/task; responsibility transfers after named human acceptance

11.4 km² is the sole metric denominator.
Replace official polygons, then recompute the full bundle.

OVERALL THESIS

Personal AI maintains identity and task continuity. The city's public bodies, wayfinding, compute, energy, and service interfaces open only for the current task and within granted permission. Return follows task completion; fault recovery does not automatically restore permission; after migration, permissions on old access points are withdrawn.

Jing-Zhang Public Spine | Connecting Home, Window, Workshop, and Ordinary Urban Fabric

Public Body | Borrow -> Dock -> Repair -> Return

On task completion, issue a receipt and withdraw permission; full personal memory never enters the public side.

System Closed Loop | Fault Recovery -> Checkpoint Recovery -> Migration with Permission Withdrawal

Verify again after recovery; old devices, old access points, and expired credentials do not regain permission automatically.

SYSTEM CLOSED LOOP

Borrow · dock · repair · return | Fault recovery · checkpoint verification | Migration with permission withdrawal · evidence closure

What remains continuous is the person's personal AI and the task at hand; what opens temporarily is the city's public capabilities.

Earlier time-based scenarios remain validation coordinates for task reassignment and fault recovery; they are no longer the overall headline.
