

A City with Doors

Century-old Jing-Zhang AI Innovation Belt | Personal AI moves with the person across the city; public facilities are called by task and permission, and can be maintained, returned, and exited.

Home | AI Origin Community Window | Dazhongsi Workshop | Zhongzhiyuan Jing-Zhang Public Spine

Borrow public bodies -> fault recovery -> migration and permission withdrawal; people and times only validate the design mechanisms.

Complete visitor loop

The public route provides bounded information, ordinary wayfinding and a staffed foyer. A private agent assembles lodging, mobility and visit services per trip. Named providers accept duty stage by stage; temporary permission closes with the task. Visitors are neither test sensors nor persistent profiles.

Local-economy loop

The public route exposes limited facts and open service cards. A private agent matches per transaction. Direct trade, rotation and appeal prevent a tollbooth platform.

Classroom-to-home loop

The school provides teacher-centred learning and a same-day minimal task pack. The family chooses named pickup and after-school services per occasion. Duty moves only through human physical handoff; a child may refuse, and the day's permission closes on family receipt. Private family data does not flow back.

Three-area collaboration

Dazhongsi receives and serves publicly; Zhongzhiyuan tests, handles complex repair and retests; AI Origin carries learning, home life and routine service. Jing-Zhang is interface only.

CURRENT READING AXIS

What remains continuous is the person's personal AI and the task at hand; what opens temporarily is the city's public capabilities.

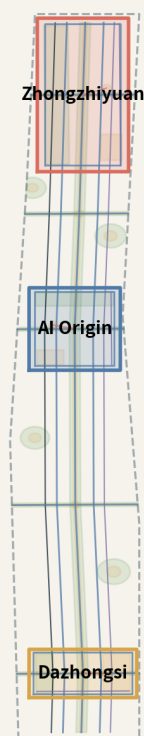

Existing scenarios in this booklet remain tests of permission, responsibility, maintenance, and exit; they no longer serve as the proposal's overall thesis.

Jing-Zhang Public Spine: Continuous Relay Between Ordinary Urban Fabric and the Three Key Areas

Transport, active mobility, blue-green systems, energy, networks, compute, and public bodies provide support; personal AI maintains task continuity.

Site Overview | Three-Level Scope and Five Urban Networks

Concept proposal / provisional geometry / not for navigation or construction

THREE SCALES

43.6 km² strategy → 11.4 km² system translation → 368.4 ha local proofs

FIVE URBAN NETWORKS

movement · blue-green/public realm · staffed service · maintenance/logistics · energy/offline recovery

THREE KEY AREAS

testing/repair · everyday continuity · public translation

ONE GOVERNANCE CONTRACT

permission resets by place/task; responsibility transfers after named human acceptance

11.4 km² is the sole metric denominator.
Replace official polygons, then recompute the full bundle.

01

Field check

Real entrances, crossings, accessible routes, ownership and utilities still require field verification.

02

Named duty

Every handoff first needs a named person or institution; a system prompt never accepts duty.

03

Ordinary baseline

Offline, paper, fixed-contact and mechanical bypass routes work before smart service is offered.

04

Governance review

Fiscal, procurement, insurance, fairness and appeal gates close before any limited trial.

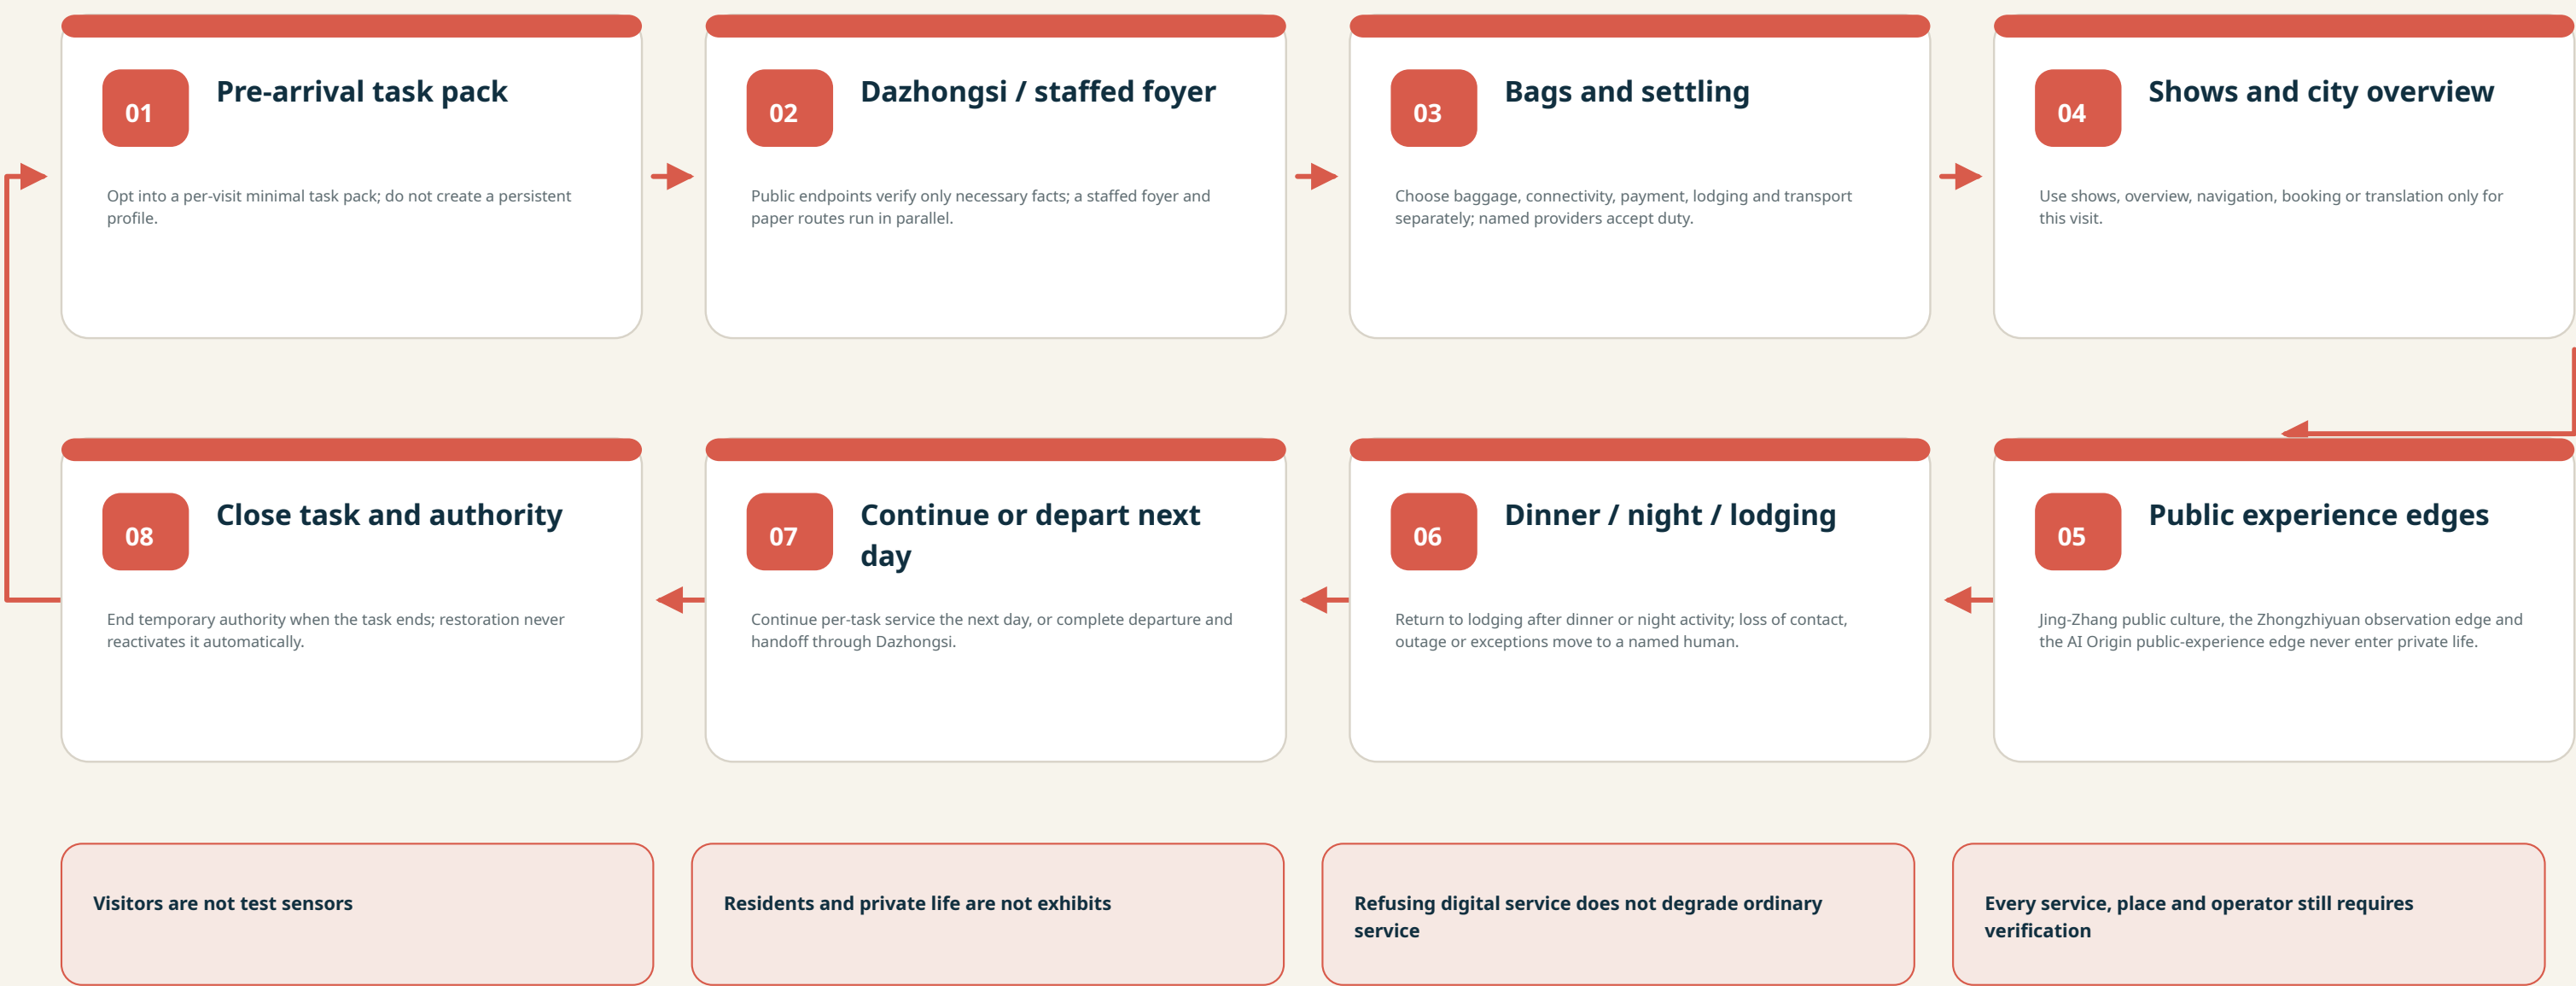

READ-ONLY CONTEXT / site-overview.en.png

The existing read-only site overview is used only for orientation. No boundary, road, land-use, building or dimension is changed.

43.6 km² coordination study / 11.4 km² overall design / three-area priority validation / Jing-Zhang public interface. Read evidence separately: official = officially verifiable; provisional = working assumption; unknown = still unverified.

Window | Dazhongsi: A Temporary Gateway for a 36-Hour Visit

The visitor's task remains continuous; urban facilities open only under time-limited permissions, then are returned and withdrawn on departure.

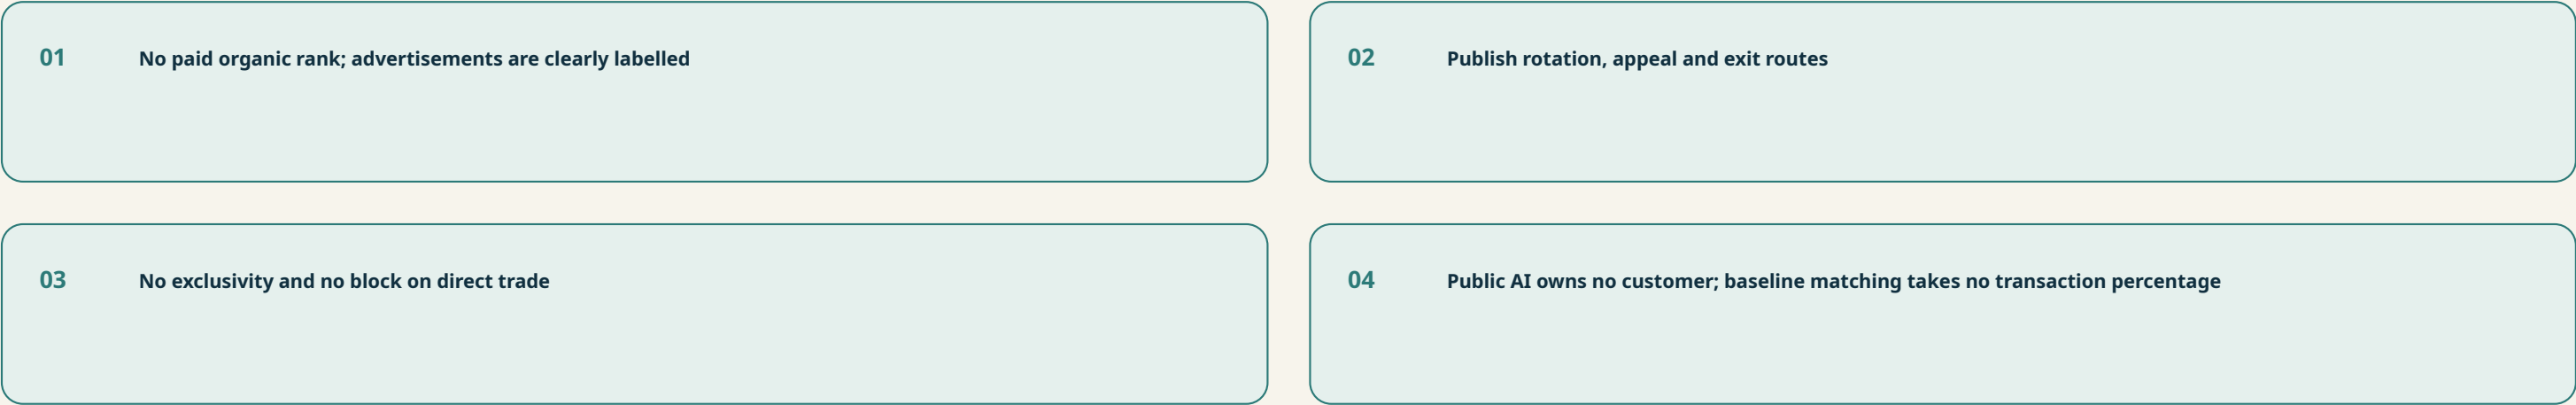

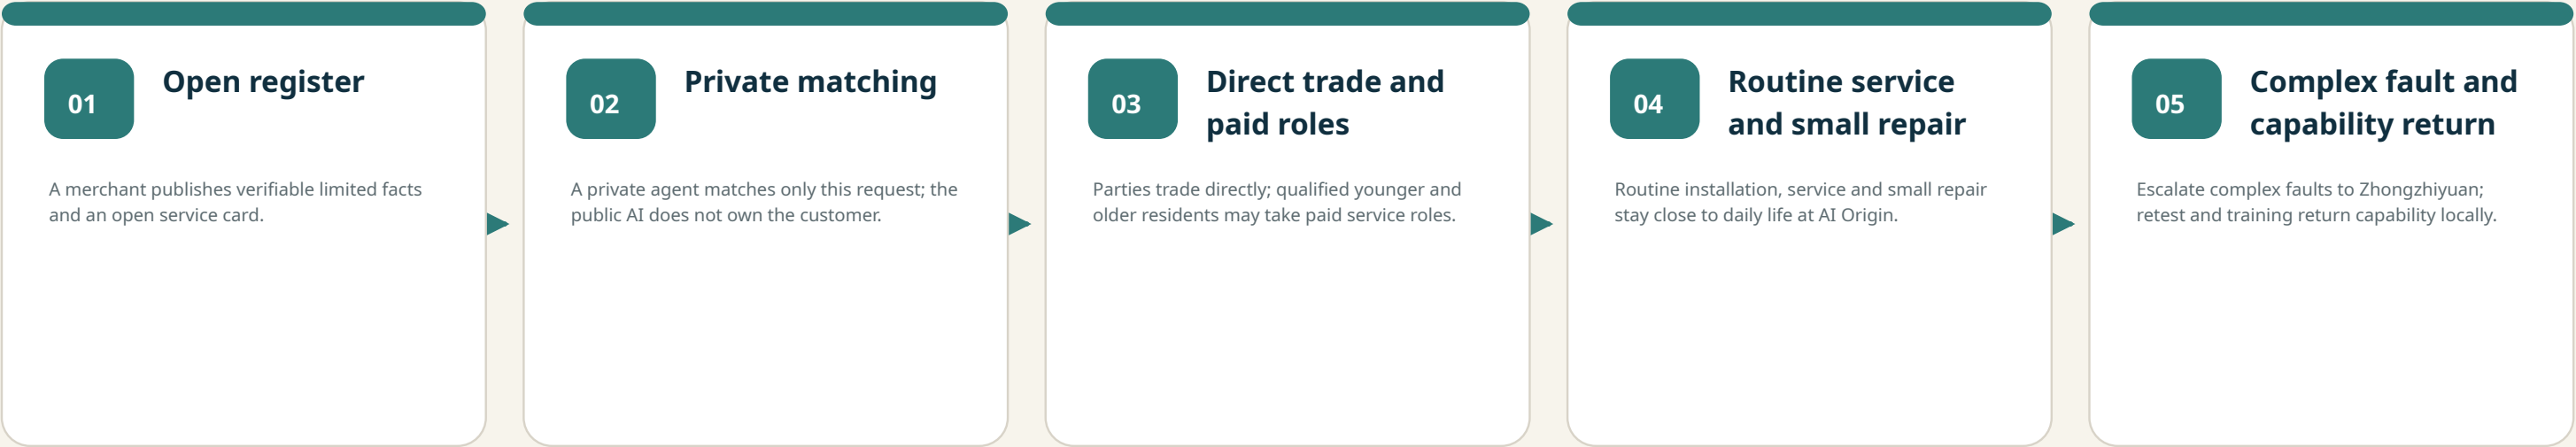

BOUNDARY MAPPING

This reading overlay stays within existing DZS-01 / DZS-03 and P07 / P08 / P09 / P10 boundaries. It creates no project or scene ID.

Workshop | Zhongzhiyuan: R&D, Testing, Repair, and Controlled Collaboration

The public knowledge front-of-house, controlled experimental courtyard, and maintenance and logistics back-of-house carry responsibility in layers.

30/70 30/70 is only an illustrative policy prototype under discussion. It is not a fixed subsidy, budget, policy or commitment. Fiscal, procurement, insurance and fairness review is required before any trial.

Reuse PRG-LOCAL / LOOP-LOCAL-01, DZS-02 and ZZY-02. DZS-02 remains mapped to P08 / P09 only.

Home | AI Origin Community: Continuous Life Across Three Generations

Long-term living, learning, follow-up care, shared family tasks, and independent household thresholds; time only tests task reassignment.

DUTY MOVES ONLY AFTER: named verification + no child refusal + human physical receipt. Private family data never flows back.

30/70 30/70 is a non-binding illustrative prototype under discussion, not a policy, budget, commitment or fixed ratio. Any trial first requires fiscal, procurement, insurance and fairness review.

BOUNDARY MAPPING Reuse PRG-EDU / LOOP-EDU-01, AIO-01 and P04 / P05 / P10. AIO-02 is reserved for outage or night exceptions.

System Loop: Fault Recovery Does Not Restore Permission

Save checkpoints during network, power, or device failures; verify again after recovery, without automatically restoring permissions.

Ordinary and offline routes

Screenless routes, paper contacts, fixed phones, ordinary or emergency lighting and mechanical doors remain usable. Refusal never degrades service.

Children and family

If a receiver does not arrive, the child stays with named school staff. No named after-school acceptance means no transfer of duty.

Paid roles for younger and older residents

After qualifications, insurance and labour protection close, residents may take paid guide, care, teaching-support or routine-service roles. Never a default duty.

Jing-Zhang JZ-03

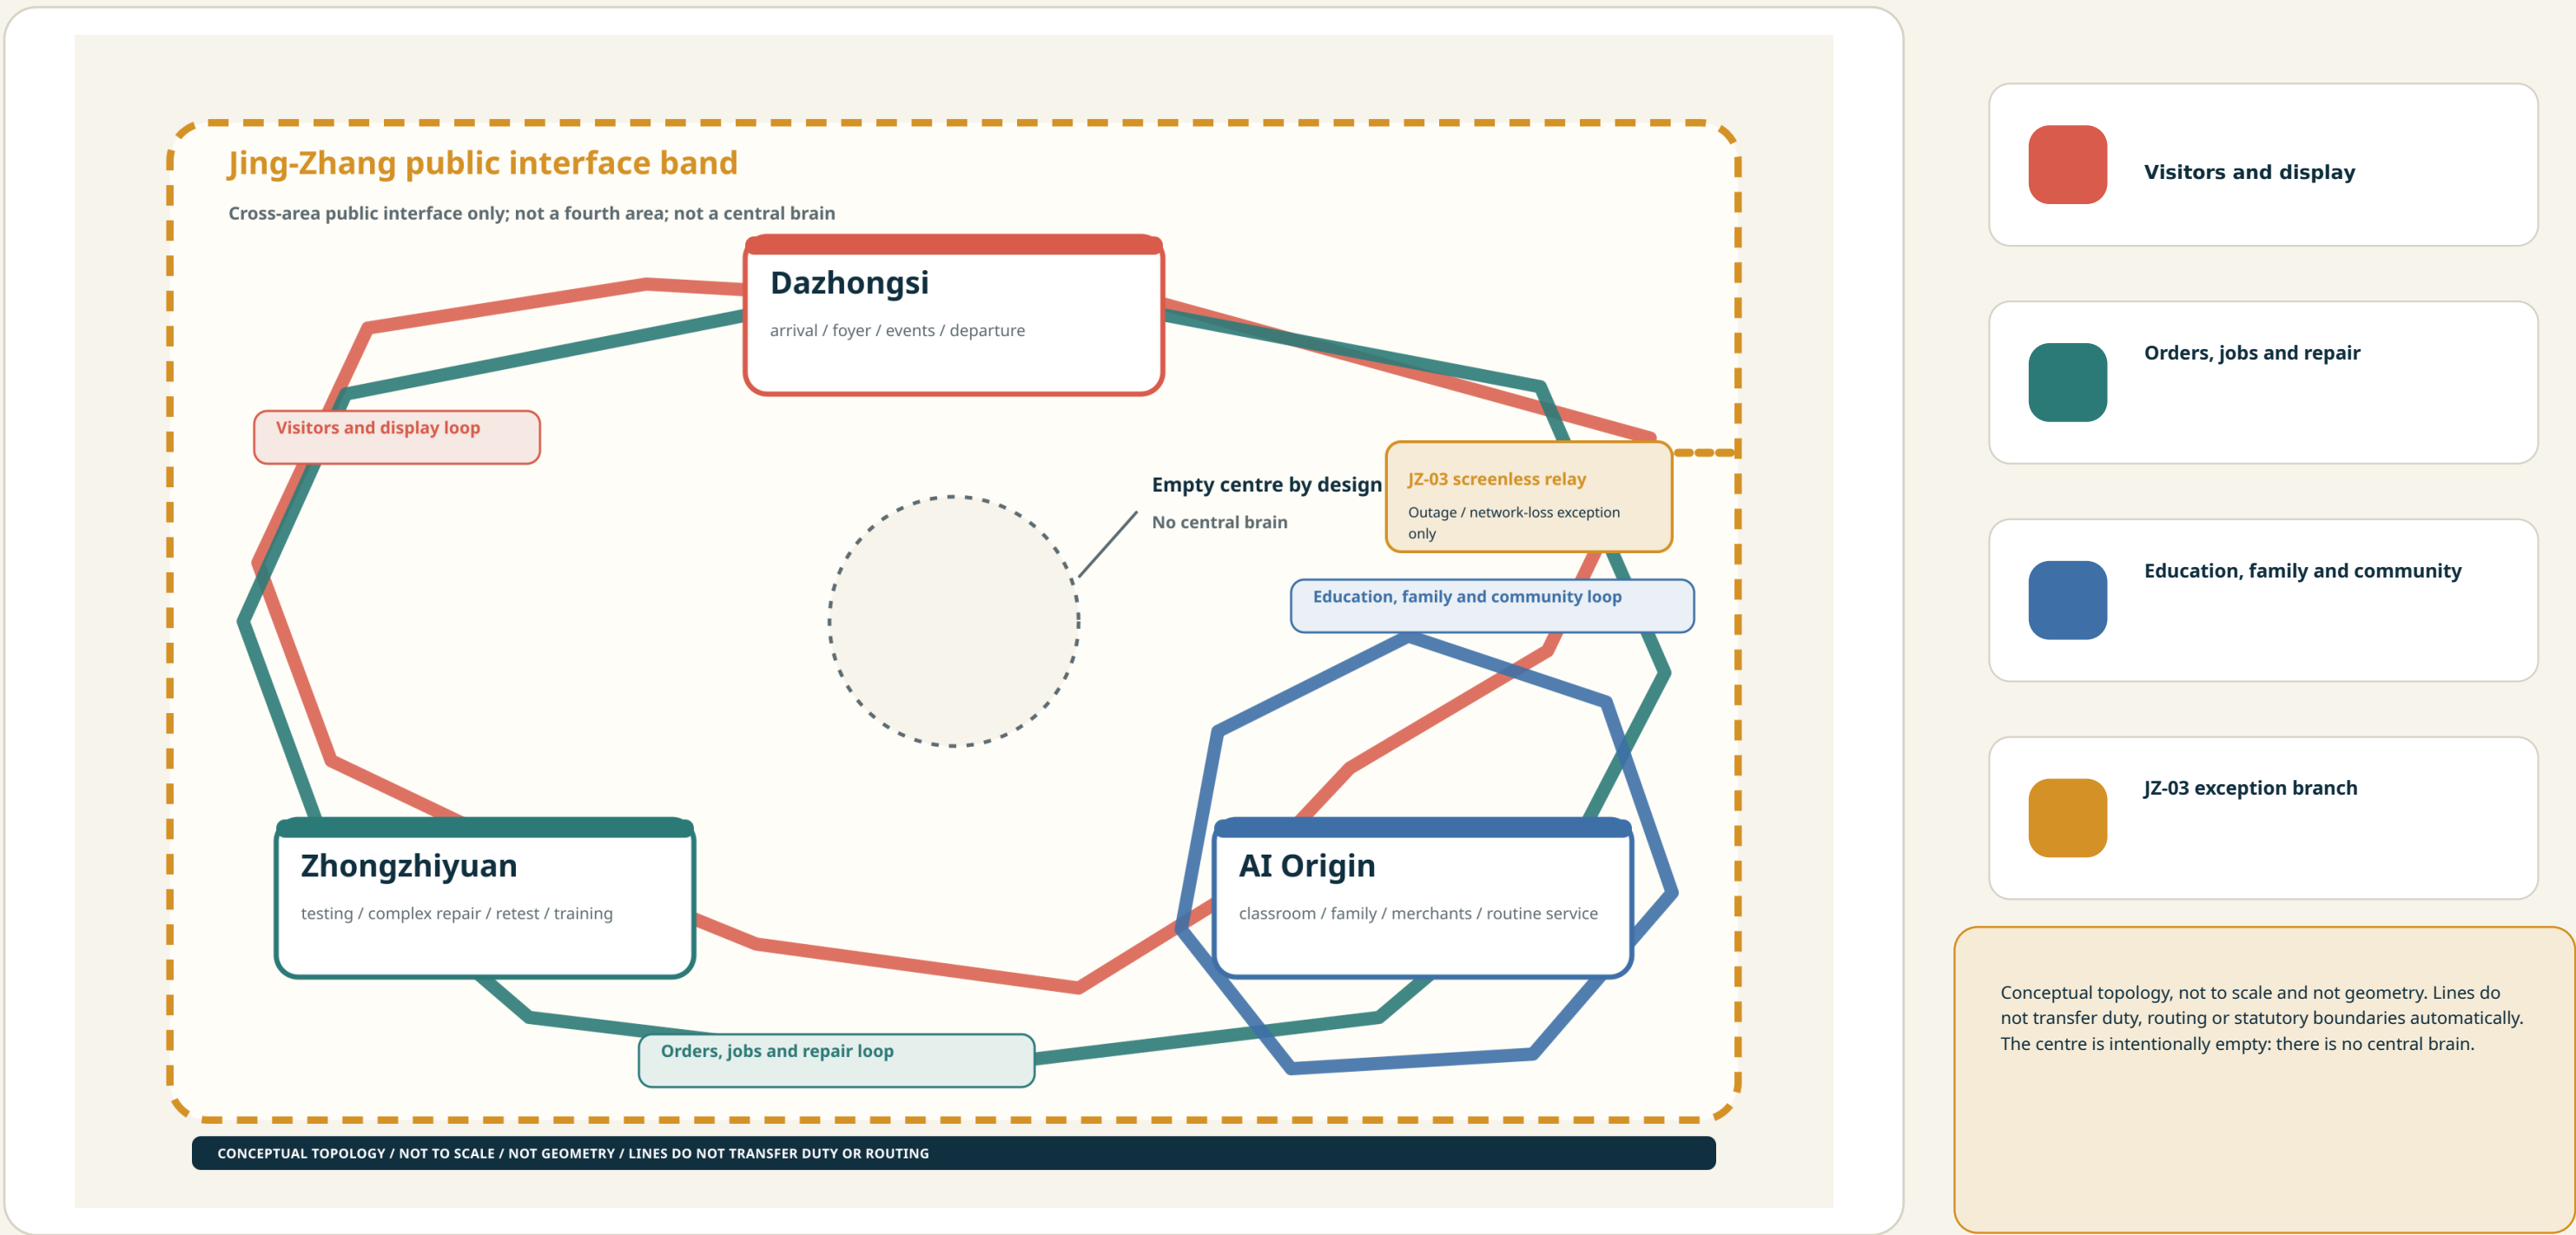

Only a screenless relay exception during outage or network loss. It is not the everyday backbone, a fourth area or a central brain.

CLOSE THE EXCEPTION

Network restoration never restores withdrawn or expired temporary permission automatically. A named human reviews minimal facts and closes the branch.

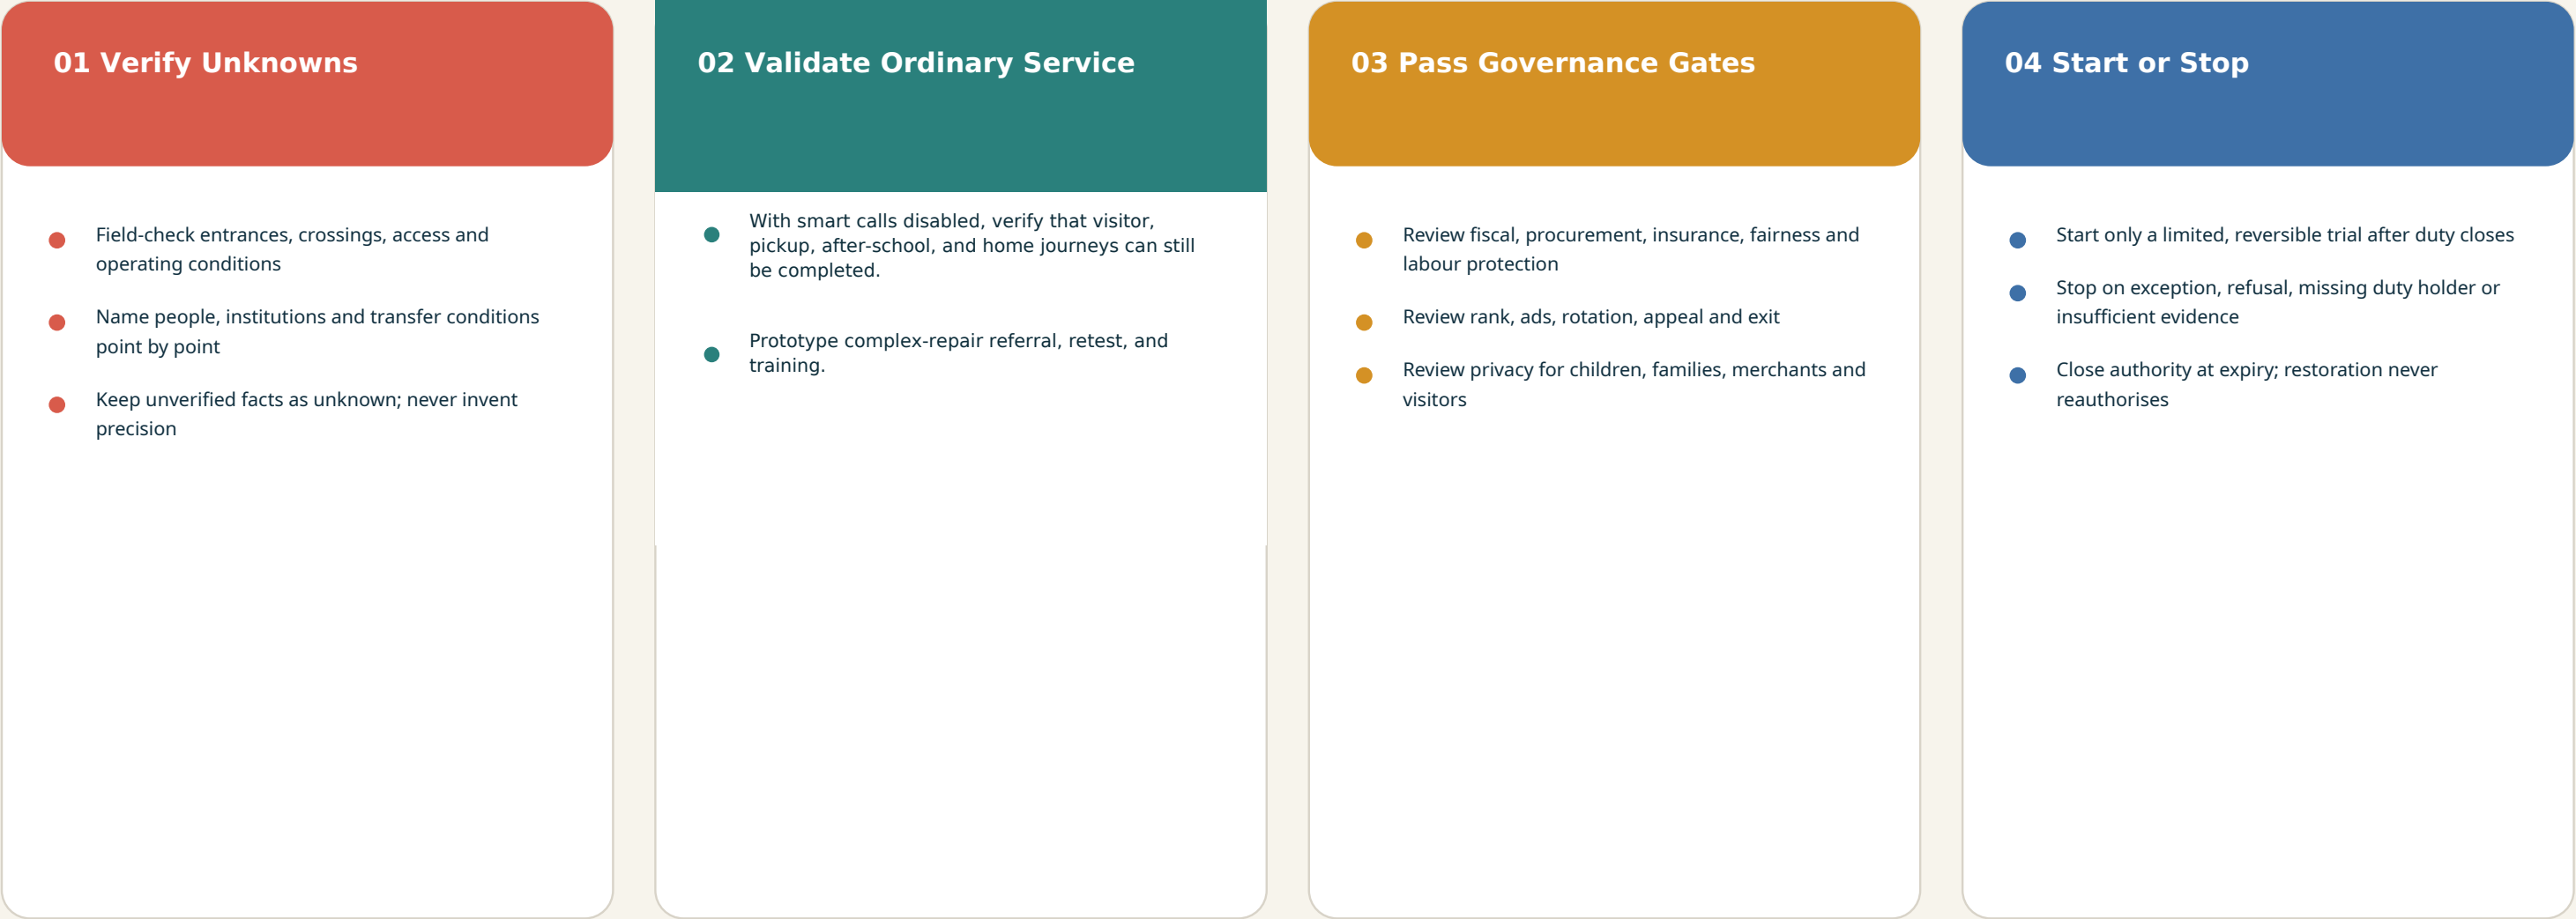

Overall Structure: The Jing-Zhang Public Spine Connects Home, Window, and Workshop

Ordinary urban fabric -> public spine -> three key areas; personal AI moves with the person, while public capabilities are called by permission.

Public Bodies and Exit: Borrow, Maintain, Return, Withdraw Permission

Validate responsibility, maintenance, and exit at limited scale first; then expand or stop according to evidence.

EVIDENCE ENTRY

Read-only evidence entry: statutory_background / measurement_protocols / responsibility_trigger_matrix / scene_cards.normalized.v0.2

What remains continuous is the person's personal AI and the task at hand; what opens temporarily is the city's public capabilities.
