

Jing-Zhang City Model Commons

From Centennial Railway to an Open Spatial Intelligence Benchmark Belt

A city should be seen, understood, simulated, and jointly verified.

A public spatial-intelligence commons built from source-traceable data, reproducible models, controlled trials, human review, and rollback. The proposal keeps every unknown control visible and every field test bounded.

Positioning, functions, Three Zones and Two Wings

Translate the taskbook into spatial roles, public interfaces, and operating responsibility.

Three positionings

Centennial cultural belt; urban AI life-experience belt; AI-integrated innovation belt.

Five functions

Full-stack innovation, world-class ecosystem, AI-enabled scenarios, active city, and governance voice.

Four layers / seven nodes

Physical, semantic, simulation, and controlled field layers make governance visible.

识别系统 / Identity System

主名、英文名、Logo方向与可复用的公共界面规则；原创概念，不调用第三方商标或图片。

Three key areas: validation, co-creation, and everyday value

Each area specifies an interface, a scenario owner, and a human fallback.

Three key areas use provisional rough geometry; detailed lines await official evidence.

Zhongzhiyuan

Benchmark vault - validation workshop - low-speed loop - observation walk - rollback desk.

Origin Community

City-model museum - open-submission wall - model clinic - developer lounge.

Dazhongsi

Everyday service arcade, accessible station, merchant waste reduction, night slow interface.

Landmarks, honor display, and component library

Sit, understand, and ask for help before opening AI; contributions move through five public states.

Component	Interface	Safety floor
C-01 Shade seating	Green spine and node edges	Shade, accessibility, night lighting
C-02 Version marker	Model/scenario entrances	Source, date, change, tactile route
C-03 Accessible co-pilot	Version line and service stations	Opt-in AI, phone, on-site help
C-04 Observation / handover	Zhongzhiyuan test boundary	Separation, speed cap, stop
C-05 Algorithm notice	Origin Community / Dazhongsi	Purpose, limits, appeal, exit
C-06 Honor plaque	Submission wall / museum	No unauthorized material

Fourteen AI scenario cards and scenario-space-operation mapping

Four industry validation scenarios; every card keeps minimum data, a responsible owner, human review, appeal, and sunset.

Public experience

- SC-01 railway memory guide
- SC-02 accessible co-pilot
- SC-03 heat-safe route
- SC-06 rule and service explainer

Community and daily life

- SC-04 school route
- SC-05 health navigation
- SC-07 learning and mentor match
- SC-08 public-space co-governance
- SC-09 waste and queue routing
- SC-10 evacuation rehearsal

Industry validation

- SC-11 embodied last-500-metre validation
- SC-12 open spatial-intelligence benchmark
- SC-13 edge-model interoperability
- SC-14 low-carbon building operations

People have default right-of-way; machines must request right-of-way

Walking, blue-green, station interfaces, static transport, and municipal responsibility are verification lists, not invented engineering alignments.

Concept network: 30.8 km walking/test lines, 22.5% green layer, eight east-west stitches.

Station / parking / municipal

Station integration, parking supply, utilities, capacity, and heritage controls remain unknown until formal evidence arrives.

Non-AI fallback

Physical wayfinding, basic lighting, accessibility, human help, and emergency routes remain available through network or model failure.

From public problem to a reversible scenario service

Developer community, open scenarios, annual activities, and international translation share one responsibility chain.

Submit -> review -> replay -> controlled trial -> public evaluation -> translation or exit.

Annual program

Open Benchmark; Model-to-Street Week; Centennial Submission Festival; City Algorithm Hearing Day.

Developer community

Open workshop -> mentors and reviewers -> contribution record -> public benchmark.

Recalculable metrics and honest unknowns

Known values come from one GeoJSON package or explicit task material; unknowns are evidence interfaces, not vision values.

核心指标不是“漂亮数字”，而是可复算证据链

Known 只来自提交几何或明确公告；法定强度、红线、现状与市政容量保持 Unknown。

11.413 km2

provisional overall design area

14 / 4 / 7

scenarios / validation / personas

Known

Extent, topology, green layer, public nodes, walking/test network, scenarios, personas, phasing, and component counts.

To be verified

Official boundary, regulatory plan, buildings, stations, parking, municipal capacity, heritage, and ownership.

Jing-Zhang City Model Commons · wms2537 · CC-BY-4.0 · conceptual recommendation

8 / 12

Locatable review entry points

Each agent task has proposal paragraphs, figures, structured files, quantities, and explicit limits.

Task	Proposal entry / figure	Key quantity
agent.1 overall and brand	Positioning / identity-system / site-overview	3 positionings / 5 functions / 3 zones + 2 wings
agent.2 ecosystem	Ecosystem map / sources.json	7 cases / 8 mechanisms
agent.3 scenarios	Scenario-space-operation mapping	14 scenarios / 4 validation / 7 personas
agent.4 public space	Honor display / public-space-system	4 landmarks / 6 components
agent.5 culture and wayfinding	Brand / identity / public-space-system	3 bilingual wayfinding levels
agent.6 activities and operations	Developer community / operations pathway	4 activities / 6 gates

Shared boundary

All spatial, industry, operation, and brand arrangements are conceptual open co-creation recommendations. Professional teams, the public, and official data must continue validation; no unknown control may be visually read as approval.

Three key areas: renewal, transport, public space, and risk

Mini-plans split each area into professional worklines whose evidence can be added without pretending that unknown data is approved.

Key area	Renewal / building	Transport / walking	Public space	Risk / gate
Zhongzhiyuan	Retain adaptable carriers; survey structure and lab safety	Low-speed loop, handover, observation; station interface pending	Vault, workshop, rollback, human help	Speed, stop, independent review, incident, sunset
Origin Community	Museum, open ground floor, workshop; ownership/capacity pending	Version line, accessible co-pilot, school/service arcade	Submission wall, clinic, notice kiosk, physical guide	Minimum privacy, appeal, deletion, exit, dual channel
Dazhongsi	Continue daily commerce/culture; flows, fire, heritage pending	Slow interface, loading, short stay, accessible parking	Open market, climate adaptation, honor plaque	No differential pricing; merchant/fire responsibility cards

First

Check official boundary, ownership, existing buildings, stations, fire, and public-service inventories.

Then test

Digital replay -> small controlled trial -> public evaluation; retain physical routes and human takeover.

Only then translate

Safety, inclusion, permission, operations, and exit must pass before a method becomes portable.

Unknown controls, provenance, and reversible governance

Confidence is a handover list: source, owner, gate, failure record, and exit condition are all locatable.

KNOWN

Geometry topology, conceptual areas, green space, public nodes, walking length, 14 scenarios, 7 personas, 4 landmarks, components, and activities.

UNKNOWN

Official redline, regulatory plan, buildings, FAR, height, stations, parking, municipal capacity, ownership, and heritage.

PROVENANCE / ROLLBACK

Canonical source IDs, access dates, licence notes, conversion notes, human takeover, stop, incident log, appeal, sunset, delete, and exit.

Pending control	Responsible input	Gate to next phase
Transit / station / parking	Official station, transfer, accessibility, loading, and fire lists	Station-by-station walk and conflict check; never draw unknown as a line
Municipal / energy / network	Utilities, capacity, load, drainage, waste, fire, maintenance owner	Responsibility card, basic service in failure, operations budget
Ownership / heritage / existing	Ownership, survey, structure, heritage, public-process records	Retain-renovate-demolish evidence chain and reversibility review

Submission package, audit entry points, and quality gates

Every task moves from proposal to figure, structured evidence, and a self-check receipt; the package is offline-reviewable and rebuildable.

Taskbook coverage

agent.1-agent.6 + announcement -> compliance_matrix.json -> taskbook_outputs.json.

Professional depth

6 standards + 15 depth items -> geometry / metrics / sources / assumptions.

Display materials

9 original figures, A3 12 pages, A0 3 pages, offline report, and static visual index.

Quality gate	Current evidence	Result
Deterministic	Manifest hashes, JSON schema, source/metric/matrix completeness	PASS
Spatial	EPSG:4548 recalculation, topology, provisional boundary and key-area notice	PASS
Visual	Overview, scope, key areas, land use, mobility, blue-green, renewal, assumptions, metric hooks	PASS
Professional	Standards, depth, 45 metric references, 14-row scenario matrix	PASS

Honest closing statement

Formal review can begin. Official boundary and professional controls still require evidence from data providers, planners, engineers, the public, and operators. This conceptual proposal does not replace statutory procedure, engineering design, or public authorization.
