

JING-ZHANG COMMUTE COMMONS

TASKBOOK DELIVERY / MINIMUM P0 EVIDENCE

A reversible public way home before any expansion

COMMUTE COMMONS / TASKBOOK DELIVERY / v2.35

Commute Commons Taskbook Delivery Atlas

CONCEPT · NO COMMITMENT

six tasks · distinct visible outputs

01 · IDENTITY

C↔C Commute Commons

enterprise request ↔ resident return

mark logic

Opposing directions share one release gate;
no public return means no enterprise window.

02 · 3 POSITIONS / 5 FUNCTIONS / 3 AREAS + 2 WINGS

P1 Centennial Jing-Zhang culture belt

Questions and repairs become a correctable archive

P2 Urban AI life-experience belt

Human entry, public return and exit stay visible

P3 AI convergence-innovation belt

Mobility, equity, responsibility and withdrawal gates

F1 full-stack AI innovation

F2 world-class AI ecosystem

F3 AI+ scenario enablement

F4 AI-enabled active city

F5 global AI-governance voice

A1 Zhongzhiyuan → A2 AI Origin → A3 Dazhongsi → W1 Tech Service Wing → W2 Xiaoyuche Wing

03 · SIX GLOBAL MECHANISMS → EIGHT-RESOURCE LOOP

CASE-01 Helsinki AI Register

mobility status card + complaint route

do not copy · register ≠ safety, access or consent

CASE-02 Amsterdam Algorithm Register

human equivalent + appeal + stop state

do not copy · foreign register ≠ local compliance

CASE-03 Singapore AI Verify

model card + takeover drill + withdrawal receipt

do not copy · test tool ≠ certification or permission

CASE-04 Decidim Barcelona

paper + phone + walk-in feedback + readback

do not copy · digital access ≠ device-free access

CASE-05 UK Algorithmic Transparency Recording Standard

nine-field public preflight for every window

do not copy · UK standard ≠ Beijing statutory rule

CASE-06 Seoul AI Foundation

real problem → pilot receipt → follow-through

do not copy · no partnership, funding or equal mandate

Eight resources exchange conditions, then return evidence:

LAND SPACE INDUSTRY CAPITAL TALENT COMPUTE DATA SCENARIO

Regional interfaces · Beiwei · Future Science City · Huairou · E-Town · Jing-Jin-Ji · all unconfirmed

04 · LANDMARKS · CULTURE · ANNUAL OPS

L1 Jing-Zhang Return Marker

one question · source · ordinary route · removal

L2 Origin Contribution Exchange

developer contribution ↔ resident question + help

L3 Four-Quadrant Responsibility Beacon

capacity · return · owner · pause · restoration

Every intelligent commute owes the city a public way home.

Q1 Open Questions Season

Q2 Care and Commute Co-test Week

Q3 Public Urban-Agent Review

Q4 Jing-Zhang Return Forum

Every season leaves a public artifact, stop rule and owned follow-up; attendance is not public benefit.

05 · DISTINCT OUTPUT INDEX FOR SIX TASKS

agent.1

- identity
- positioning
- functions

agent.2

- six global mechanisms
- eight ecosystem resources
- five regional interfaces

agent.3

- ten scenario cards
- three industry tests
- six participant groups

agent.4

- three responsibility landmarks
- ordinary-accessible-human route rules
- honor/correction/removal protocol

agent.5

- commute culture story
- five-layer wayfinding
- international copy

agent.6

- four-season operations
- P0-to-P2 conversion
- public review

Commute Commons | AI Origin Care Loop Minimum P0 Evidence Pack

01 · WHY THIS NODE FIRST

AI Origin Community Care Loop

- Validate daily resident access and a human-equivalent entry;
- no dependence on the unresolved Dazhongsi anchor;
- no enterprise-vehicle expansion as a pilot prerequisite.

ordinary chain

accessible alternative

02 · FOUR WINDOWS · ONE VERSION AND STOP CONTRACT

T1 weekday AM peak

07:00-09:00

design window · not scheduled

T2 community daytime service

10:00-12:00

design window · not scheduled

T3 PM peak and care return

17:00-20:00

design window · not scheduled

T4 night human fallback

20:00-22:00

design window · not scheduled

Every record carries date, weather, counter role, missing interval and spatial version; incomparable windows do not enter calibration.

03 · SEVEN EVIDENCE STREAMS · TEMPLATES READY · FIELD RECORDS 0

E1

grouped flow and request

2 weekdays + 1 stress window before calibration

0 RECORDS

E2

segment accessibility walk

ordinary + accessible chains walked by day and night

0 RECORDS

E3

curb and public-route responsibility

accepted receiver + public-route restoration check

0 RECORDS

E4

human and public-transport fallback

one outage/weather human takeover per window

0 RECORDS

E5

data minimisation and retention

purpose + expiry locked before collection

0 RECORDS

E6

participatory threshold sign-off

each affected group can disagree and correct

0 RECORDS

E7

public status and closeout

readable board + paper/phone correction route

0 RECORDS

UNKNOWN never becomes zero; any group hidden by an average triggers a block.

04 · RACI AND FIVE RELEASE GATES

site and data steward

UNASSIGNED

transport and accessibility reviewer

UNASSIGNED

resident carer disabled user panel

UNASSIGNED

human service and transit handoff

UNASSIGNED

independent closeout reviewer

UNASSIGNED

G1 scope and rights

HOLD

G2 dated grouped baseline

HOLD

G3 accessible and human fallback

HOLD

G4 responsibility and resources

HOLD

G5 participatory review and closeout

HOLD

Current: 0 confirmed roles · 0 group sign-offs · 0 passed gates

MODEL INVALID → STOP:

incomparable window / missing group denominator / route version changed / missing interval / unmodeled barrier

This is a participant-controlled field protocol, not a field result. Missing official geometry does not block the protocol, but zero records never advance to P1.

COMMUTE COMMONS / SPATIAL DECISION

Protect the public return before dispatch

HOLD · NOT FIELD-RUN

01 / Three alternatives, no preference as proof

ALT-A Enterprise-first booked curb

REJECT / displaces ordinary and accessible return
One digital queue cannot replace an independent public path

ALT-B Three independent feeder windows

REVISE / handoff, appeal and blackout ownership split
Needs a shared receipt, maintenance roster and closeout card

ALT-C Public spine + reversible curb window

ADVANCE TO DESIGN REVIEW / professional deepening
Rail, bus, ordinary return, accessible and human paths come first
Booked service can pause and be removed; not authorised or operated

02 / Five scales, one question at each

1:5000 Rail—bus—public spine

Read the regional full-day backbone

1:2000 Three nodes and handoffs

Read care, arrival and maintenance encounters

1:500 Station / curb interface

Read ordinary, accessible and human paths

1:200 Wait—handoff—retreat section

Keep booked/service off the public route

1:50 Paper receipt and removable edge

Read takeover, blackout and appeal

Concept scales; survey and professional review pending

03 / Three nodes × five rights

Public rights before efficiency readouts:

- 01 Ordinary walking, bus and rail access
- 02 Continuous accessible route and help
- 03 Rail and bus stay in the denominator
- 04 Paper, phone, appeal and pause
- 05 Aggregated need, exit and deletion receipt

CURRENT STATE

HOLD · provisional · authorization 0 · field claims 0

READ THIS BOARD AS A DESIGN CONTRACT

Source: local package contract and provisional geometry. No field observation, operating permit, resident sample, capacity result, public ranking or implementation claim.

Chinese board with source, assumption and HOLD boundaries

JING-ZHANG COMMUTE COMMONS / 147228

Full-Day Activity-Chain Service-Equivalence Receipt

Accept the ordinary route, human takeover and maintenance write-back before comparing AI options.

DESIGN ONLY
HOLD / 0 field observations

Every handoff leaves four records

- | | | | |
|--|---|--|--|
| 1. Field denominator | 2. Non-AI equivalent | 3. Refusal and fallback | 4. Maintenance write-back |
| Grouped basis for choice, completion, complaint and review | Paper, phone, staffed service or public transport | Missing evidence freezes service and returns to P0 | Owner, version, date and unresolved item plus review |

Ordinary route

Paper / phone / staffed desk
Entry without an account, network or model

Five gates before expansion

Baseline · role · equivalence · withdrawal · review
Any missing gate keeps the decision at HOLD

Current status

Authorisation 0 · field observations 0
Local baseline unknown · performance null

Source: package-local contract and provisional key areas. Design review only; not a field survey, operating result, permit or approval.

Chinese board with source, assumption and HOLD boundaries

Enterprise-resident co-benefit contract

C3 selected · synthetic deltas only · every benefit carries a protection and stop gate

ENTERPRISE BENEFIT

- satisfaction proxy 91.28 → 91.87 (+0.59)
- activity-chain completion 72.1% → 100.0%
- vehicle-km proxy 4,023,920 → 994,510
- shift window input 18% · not observed behavior

RESIDENT PROTECTION

- minimum accessibility 0.928 → 0.963
- minimum protected-group score 91.64
- protected-group shift 0% by contract
- human / metro / bus fallback REQUIRED

STOP / VERIFY

- hard gates 10/10 PASS
- air candidate BLOCKED
- external commute UNKNOWN until grouped OD
- any failure FREEZE → P0; fallback retained

DECISION RULE

An enterprise benefit is admissible only when protected-group access, fallback, capacity, privacy and public review remain inside the same gate.

This is a design contract over synthetic aggregates. It does not prove resident acceptance, enterprise adoption, local OD, capacity, service quality or permission.

source: commute-co-benefit-contract.json · external-commute-ledger.json · aggregate only · field calibration required

Chinese board with source, assumption and HOLD boundaries

Selected policy

C3 commute co-benefit bundle / C3 通勤共益組合

mean cost 8,093 · P90 60 min · vehicle-km 3,540,229

Synthetic aggregate screen only. No resident response, employee sample, local OD, timetable, or air-service approval is claimed.

Re-run: node visual/assets/run-commute-co-benefit-optimization.js --check

COMMUTE CO-BENEFIT COMMONS / SCENARIO CONTRACTS

M-01Enterprise shuttle merge

DESIGN CONTRACT · UNRUN

SPACE

Zhongchayuan entrance — rail stop — curb window

PEOPLE

Enterprise employees; residents affected by curb changes

TRIGGER

A weekday AM peak with at least two grouped enterprise demand windows

INPUT

15-minute grouped demand, first and stops, fine clearance, resident objection log

ACTION

Compare a merged shuttle with metro/bus, bicycle and walking connections

READOUT

Mode share, station load, curb conflict and complaint first response

OWNER

Enterprise mobility; rail/bus; field maintenance

FALLBACK

Keep public transport and human return-home service; do not open shared booking

STOP

Stop without dated demand, an accountable operator or a reviewable resident-conflict record

M-02Employee transit benefit

DESIGN CONTRACT · UNRUN

SPACE

Enterprise entrance — metro/bus transfer interface

PEOPLE

Enterprise employees; low-car travellers; accessible-travel users

TRIGGER

An enterprise proposes a grouped mode baseline and an opt-out benefit test

INPUT

Mode share, fare rules, accessibility entry, employee consent and opt-out route

ACTION

Compare the benefit with human, telephone and paper access without reporting research effects as local shift

READOUT

Grouped mode change, non-digital access, waiting and refusal rate

OWNER

Enterprise mobility; rail/bus; privacy and safety review

FALLBACK

Do not start the benefit test; retain ordinary fare and human-desk access

STOP

Stop without opt-out, fare, grouped baseline or equivalent accessibility entry

M-03Guaranteed night return

DESIGN CONTRACT · UNRUN

SPACE

Enterprise entrance — night stop — community service desk

PEOPLE

Night workers; evening carers; night maintenance staff

TRIGGER

A dated grouped return-home demand appears for a night shift

INPUT

Demand range, staffed phone, takeover person, safe waiting point and ground route home

ACTION

Start with rail/bus and a human phone entry, then assess any low-speed feeder gap

READOUT

Answer rate, waiting time, human takeover rate and route completion

OWNER

Enterprise mobility; community service; field maintenance

FALLBACK

Remain in investigation if no person can answer; do not open booking

STOP

Stop without a staffed phone, waiting point, safety review or return plan

M-04Loading reservation

DESIGN CONTRACT · UNRUN

SPACE

Enterprise entrance — service curb — fire route

PEOPLE

Logistics and maintenance staff; residents; emergency responders

TRIGGER

A service vehicle needs a short loading window without occupying the public continuous route

INPUT

Vehicle class, curb owner, clearance deadline, fare and accessibility detour

ACTION

Make service curb a short window with an owner and a clear end time

READOUT

On-time clearance, fine clearance, accessible detour and resident complaints

OWNER

Enterprise mobility; field maintenance; accessibility review

FALLBACK

Record loading only; do not reserve public curb

STOP

Stop without ownership, clearance evidence or fine/accessibility detour

M-05Resident care trip

DESIGN CONTRACT · UNRUN

SPACE

AI Origin community — community desk — hospital-direction transfer

PEOPLE

Residents; carers; children; older adults

TRIGGER

Residents request a care trip by service type with a return plan

INPUT

Grouped service type, human/telephone/paper entry, care rule and return plan

ACTION

Place AI and equivalent human routes side by side; do not require an app for basic access

READOUT

Route completion, waiting, refusal and continuity of the care return trip

OWNER

Community service; resident/care observation; accessibility review

FALLBACK

Keep ordinary public transport and a human desk; do not require registration

STOP

Stop without non-digital access, a return plan or data minimisation

M-06Accessible daily route

DESIGN CONTRACT · UNRUN

SPACE

Community — station — public-service continuous walking line

PEOPLE

Wheelchair users; mobility-aid users; carers

TRIGGER

A recommended route involves ramps, lifts, crossings or weather change

INPUT

Continuous route audit, lift/ramp status, crossings, gradients and weather fallback

ACTION

Verify an equivalent ground route before any digital recommendation becomes eligible

READOUT

Route completion, breaks, detour time and human assistance demand

OWNER

Accessibility review; field maintenance; resident/carer observation

FALLBACK

Close the recommendation if any segment lacks an equivalent fallback

STOP

Stop without dated verification of lifts, ramps, crossings or weather fallback

M-07Rail last 500 metres

DESIGN CONTRACT · UNRUN

SPACE

Daxiueqi station entrance — bicycle parking — enterprise/resident entries

PEOPLE

Rail commuters; residents; visitors; accessible-travel users

TRIGGER

The station entrance and last leg show a countable time-window pressure

INPUT

Station/transfer counts, last-leg audit, bicycle parking and time baseline

ACTION

Place metro, bus, bicycle, walking and accessible connections in one station ledger

READOUT

Transfer reliability, station load, parking occupancy and accessibility completion

OWNER

Rail/bus; accessibility review; field maintenance

FALLBACK

Do not substitute synthetic time for station/street counts; keep ground public transport

STOP

Stop without station, street, parking and accessibility baselines

M-08Event-day separation

DESIGN CONTRACT · UNRUN

SPACE

Public space — station entrance — logistics and emergency routes

PEOPLE

Residents; visitors; logistics/maintenance; emergency responders

TRIGGER

An event-day attendance range and resident return demand can both be registered

INPUT

Attendance range, resident return, logistics/emergency routes and clearance owner

ACTION

Separate walking, service, feeder and emergency flows by time without closing the public route

READOUT

Emergency continuity, on-time clearance, resident return and conflict events

OWNER

Community service; traffic safety; field maintenance; independent review

FALLBACK

Reduce or cancel the rehearsal if emergency access is not continuous

STOP

Stop without a defined event range, evacuation route or clearance owner

M-09Storm/surge degradation

DESIGN CONTRACT · UNRUN

SPACE

Whole mobility loop, with accessible and public-transport fallback priority

PEOPLE

All travellers; wheelchair users; night workers; maintenance staff

TRIGGER

A weather, communications or rail disruption occurs

INPUT

Dated disruption cases, manual takeover list, ground route and replay record

ACTION

Freeze bookings and return to human service, ground transit and continuous accessible routes

READOUT

Fallback coverage, slowest group, recovery-time proxy and unmet demand

OWNER

Rail/bus; field maintenance; independent safety/privacy review

FALLBACK

Return to human and ground public transport when AI is unavailable

STOP

Stop without human takeover, a fallback route or an incident replay record

M-10Complaint and repair closure

DESIGN CONTRACT · UNRUN

SPACE

Community desk — enterprise mobility desk — curb assets

PEOPLE

Residents; enterprises; maintenance staff; accessible-travel users

TRIGGER

A complaint, curb fault, accessibility break or service refusal is recorded

INPUT

Public complaint entry, owner, response SLA, repair log and independent review data

ACTION

Record the problem, temporary fallback, repair, response and restoration in a readable ledger

READOUT

First response, closure, response, repair and response-to-objector status

OWNER

Community service; field maintenance; independent review

FALLBACK

Do not call it closed without an owner and status update; return service to the human entry

STOP

Stop without a complaint entry, owner, timestamp or response evidence

Evidence: unknown, until, authorized · Item: not, authorized, not, run · These are design registers, not patterns, permits, resident validation or field performance

Chinese board with source, assumption and HOLD boundaries

COMMUTE CO-BENEFIT COMMONS / SPATIAL RELATIONSHIP

Five curb states / ownership entry

Colors show a concept contract, not observed occupancy

- open
- booked
- service
- human-only
- emergency

Mode relationship

- rail / bus backbone
- walking / accessible
- bicycle connection
- car and service curb

This map helps readers see
how the three key areas share one network
where enterprise, residents, rail and curb meet
where the five curb states enter the contract

This map does not prove
official redlines, real stations or observed flows
resident demand, timetable capacity or permits

Spatial relationship map · read the three areas first, then modes
