v0.7 | How AI changes urban form: six reversible physical interfaces

ordinary city baseline → physical repair → optional AI → functioning exit node

Shared principle: AI is not an eighth level-use category, it enables spatial interfaces that can stand, stop and be replaced.
Example only: all elements accompanying interfaces require their activation.

Mobility + blue-green | different reality, different spatial response

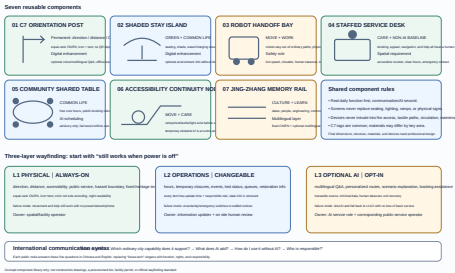

Fixed reviewer input: east-west links are no longer drawn as one generic condition. Public evidence matters only when it changes a spatial decision.

AI alignment remains conceptual relationships: no road surface, bridge/hand scheme, section exit, flexibility or approved control plan is claimed.

Jing-Zhang City Completeness v0.5 | Public-Space Component Library + Three-Layer We

Design goal: processes and places in time → permanent public space → shared → permanent → the agreement with the space owner and the public

Concept proposal • design-first • provisional geometry is not an official redline

--	--	--

This table states conceptual quantity bases, roles and maintenance cadence only. Currency budgets, total FTE, procurement entities, insurance contracts and approvals remain UNKNOWN.

Shared decision gate: **PRECONDITION – TEST – RECEIPT – DECISION**

1 PRECONDITIONS
no exception – do not start

2 TEST (both receipt)
2 of 4 boundaries can't be tested

3 RECEIPT (no test)
nothing to receive the deposit

Shared boundary: if reasonable parties, periods, safety, insurance, no extra hours or 50% conditions cannot be verified, the proposal remains a concept proposal, no take budget, partnership is schedule 1st the gap.

Concept only implementation framework. Provisional geometry is non-official and is not a procurement, approval, contract or construction basis.

Concept proposal • design-first • provisional geometry is not an official redline
