

JING AI LIFE BELT

JingZhang - AI Life Corridor

From 100-Year JINGZHANG Memory to an AI-Native Urban Life Experimental Belt

Comprehensive Study 43.6 km² | Overall Design 11.4 km² | Key Areas 368.4 ha

One Belt - Three Cores - Multi-Scenario Points - Blue-Green Loop

A3 Design Book: scope framework / overall structure / key areas / scenario implementation / metric recompute / risk & compliance

A0 Boards: overview / three-core detail / AI scenarios / phasing / compliance matrix

Author: auctlemn | Draft working document | bilingual briefing summary is a separate deliverable

01 Design Basis and Three-Tier Scope

Basis: Qualification Announcement (Beijing Municipal Commission of Planning and Natural Resources, Haidian Branch, 2026-05-09)
for the International Scheme Solicitation of Urban Design for the 100th Anniversary JINGZHANG AI Innovation Belt;
site-package provides machine-readable design_brief, allowed_design_space, enums, ranges, schemas and sources.
Three tiers (provisional): Comprehensive Study ~43.6 km2 -> Overall Design ~11.4 km2 -> Key Areas ~368.4 ha.
Key Areas (provisional polygons): Zhongzhiyuan AI Independent Innovation Acceleration Zone / Beijing AI Origin Community /
Dazhongsi AI Industry Cluster Zone.

Scope & compliance checks already built: project_scope_summary, agent_task_requirements, source_use_matrix, missing_data_checklist.
BOUNDARY WARNING: all geometry in this package is provisional placeholder. When official SITE_BOUNDARY / KEY_AREA arrive,
replace every polygon and recompute all metrics; provisional must NOT be treated as official redline, approval basis, or precise area.

02 Overall Concept and Spatial Structure

One Belt: JINGZHANG Railway Relic Park turned into a green vitality belt carrying memory, slow mobility and public life.
Three Cores: Zhongzhiyuan (North, indigenous innovation), AI Origin Community (Central, near-campus transfer), Dazhongsi (South, AI industry & economy).
Multi-Scenario Points: open-source launch hall, edge-compute stations, slow-mobility signage, station plaza launch podium, data-factor parlor, safety sandbox, low-carbon corridor, campus transfer street.
Blue-Green Loop: vitality belt + Qinghe / Xiaoyuehe water systems + flanking public spaces = continuous ecological ring.

Brand (draft): main name JingZhang - AI Life Corridor; logo uses the JINGZHANG line as base graphic, three dots for the three cores, and a spark symbol for AI. Visual system: NAVY(#1F2A44) base, GOLD(#C79838) accent line; see assets/figures/brand-identity.png.

03 Land Use, Buildings and Intensity

Land use: complete, gap-free cover per MNR land-use categories: 0802 R&D & S&T services, 0804 education/research (near campus), 05 commerce & scenarios, 0701 residential, 1401 park & green (vitality belt), 1207 roads.
land_use.geojson tags each parcel with land_use_code + area; parcels lacking ownership or regulatory detail are marked TBD.
Buildings: classified keep / renovate / renew / rebuild / TBD. buildings.geojson (878 features) is a concept footprint only, NOT a legal massing; it must not be cited as statutory volume.
Intensity: floor area, FAR, height/density are set to unknown / pending_control where official conditions are missing; no fabricated precision. Green-space ratio and public-space ratio are recomputed from green_space / public_space geojson and clearly labeled provisional estimates.

04 Transport, Municipal and Public Services

Rail: station-area integration at Dazhongsi, Tsinghua East Rd West, Wudaokou etc.; interchange relations expressed via roads.geojson without depending on coordinates.
Roads: secondary/local street micro-circulation, gap stitching, north-south slow corridor connecting public_space / green_space.
Municipal: edge-compute stations, distributed energy, innovation platforms, talent services (composite municipal + AI public services).
Missing road redlines, utility, fire/flood and heritage data are recorded as prerequisites for further design, not asserted conclusions.

05 Blue-Green Public Space, Streetscape and Ecology Map

Blue-Green: vitality belt as skeleton; Qinghe and Xiaoyuehe weave through; ecology map (land-use -> allowed + transition) as the chain.
Public space: station plaza launch podium (3 sites in public_space.geojson), pocket-garden system, event nodes.
Accessibility: children, elderly, disabled, low-income and frontline workers use universal standard + alternative service + co-design mechanism.
International: English name, bilingual boards for overseas reviewers; heritage and AI-new-culture narratives run in parallel (rail spark logo).

06 Scenario Cards and Implementation Matrix

Scenario cards (>=10): open-source launch hall / safety sandbox / edge-compute station / AI slow-mobility guide / Dazhongsi international roadshow / Qinghe low-carbon corridor / campus transfer / data-factor parlor / AI-life model street / global AI-week route. Test-and-verify scenarios (>=3): launch hall (launch-test-remove), edge station (onboard-verify-exit), Dazhongsi plaza podium (invest-recruit-roadshow-exit). Implementation matrix: JZ-01 slow-mobility gap stitch / JZ-02 Zhongzhiyuan waterfront / JZ-03 campus transfer street / JZ-04 Dazhongsi station quadrants / JZ-05 edge-compute nodes / JZ-06 global AI-week route; each with dependencies, owners, phase, risks and performance metrics. Phasing: PHASE-001 north segment near-term pilot -> PHASE-002 mid segment renewal -> PHASE-003 south segment governance.

07 Indicator System and Metric Recompute

Core spatial indicators (recomputable from geometry, labeled provisional): overall area, green-space ratio, public-space ratio, building footprint area, phasing areas, number of key areas.
Regulatory indicators (need official regulatory plan / task attachments): FAR, height, density, setbacks, redlines.
Performance indicators (operations-calibrated): talent density, scenario usage frequency, slow-mobility accessibility, satisfaction, event participation.
Warning: temporary areas/ratios use reasonable significant figures and are labeled 'temporary estimate'; when official geometry is released, recompute in batch and run a difference check against this baseline.

08 Risks, Copyright and Compliance

Copyright: this booklet declares rights of images, icons, maps, data, code and AI-generated content; every asset is registered with source, license, acquisition time, transformations and limits in sources.json.

Compliance: this package does not claim official approval, approved regulatory plans, a final operating entity, or guaranteed implementation; rules, redlines and fonts are only used with appropriate rights.

The standalone English summary is a separate deliverable and is NOT yet complete; it will be attached as a full-text one-pager.

Remaining: re-run strict self-checks via the mark-self-checked flow once issue #807 synchronization completes.
