

The Jing-Zhang Loop

A3 Booklet - Submis

Project Overview

Site: Haidian District, Beijing - 43.6 km2 study area, 11.4 km2 design area
Three Districts: Zhongzhi Park (192.1 ha) / AI Origin Community (104.3 ha) / Dazhongsi (72.0 ha)
Framework: The Loop - Innovation / Spatial / Infrastructure
Structure: One Axis (Developer Corridor 8.7km) + Three Districts + Five Nodes
Key Innovation: Boundary Interface Model, 24h Zone as Global AI Collaboration Infrastructure,
Citizen AI Participation Model, Innovation Flow Spatial Support System
Implementation: Phase 1 Connection (1-5yr) / Phase 2 Capability (5-12yr) / Phase 3 Global Network (12-20yr)

All spatial boundaries = provisional bbox. All metrics = Innovation Capacity (not Planning Requirement).
All spatial measures = conceptual proposals. Planning controls: all 5 items missing.

Site Overview

Land Use Structure

Land Use Structure — Three Key Areas (Conceptual)
土地利用结构 — 三区概念方案

Three Districts - Spatial Strategies

Zhongzhi Park

Research Core
192.1 ha

- + Boundary Interface Model: 3-layer campus edge activation
- + Innovation Showcase: street-facing glass facades
- + Cross-Institutional Joint Lab Cluster: 3-5 buildings
- + Shared Computing Infrastructure: 2-4 ha reserved
- + Knowledge Origin Node: heritage + academic venue

AI Origin Community

Collaboration Hub
104.3 ha

- + Collision Hub: conference(2000) + hackathon + VC residency
- + Elastic R&D Zone: modular 50/150/500/1500 m2 units
- + 24h Zone: Global AI Collaboration Infrastructure
- + Developer Residency: 4-tier (1d/1wk/1mo/3mo)
- + Open Source Engine Node: 24h code collaboration space

Dazhongsi

Application District
72.0 ha

- + Citizen AI Participation: 4-layer model (exposure to co-creation)
- + Urban Sandbox: Tier 1/2/3 controlled testing environment
- + AI Product Launch Hall: 4,000-8,000 m2 flagship venue
- + Citizen Tester Center: recruitment+training+feedback
- + Turing Market: weekend public AI experience

Key Areas Detail

Conceptual proposal - all spatial measures are conceptual suggestions

Innovation Flows & Implementation Path

Innovation Flow Spatial Support System

Knowledge Flow

Zhongzhi Park <-> Origin Community
Bidirectional: research output + industry demand feedback

Talent Flow

All three districts <->
Multi-directional: employment, entrepreneurship, internships, visiting scholars

Data Flow

Dazhongsi -> Origin -> Zhongzhi Park
South-to-North: test data, computing usage, spatial usage data

Capital Flow

Origin Community -> Dazhongsi
North-to-South: seed to Series A/B, VC-to-startup matching

Public Feedback Flow

Dazhongsi -> Origin -> Zhongzhi Park
South-to-North: citizen experience data, demand signals

Implementation Loop

Phase 1: Connection (1-5 years)

Low-cost, high visibility, reversible. Connect existing resources.

Phase 2: Capability (5-12 years)

Medium investment, structural transformation. Build innovation capacity.

Phase 3: Global Network (12-20 years)

Vision investment, international competition. Global AI node status.

All metrics = Innovation Capacity. All boundaries = provisional bbox.
