

JING-ZHANG ONE MILLIMETER

Making each millimeter of rain an
observable, learnable, and reversible civic
space

1 SPINE • 3 COURTS • 2 WINGS • 12 STATIONS

Concept mood image generated with the built-in image tool; not a site
photograph or an existing built condition.

01 OVERALL STRUCTURE AND EVIDENCE BOUNDARY

One spine joins railway heritage, slow mobility, rain gardens, and public learning. Three courts serve Zhongzhiyuan, the AI Origin Community, and Dazhongsi. Two wings support research testing and talent life. Twelve stations collect aggregated environmental data only. Every alignment must be recalculated when official polygons, streets, utilities, and hydrology are supplied.

02 CONCEPT LAND USE AND RENEWAL LOGIC

The complete partition checks topology and programme capacity; it is not statutory zoning. Renewal starts with crossings, accessibility, shade, and reversible rain-garden interfaces; then tests three courts; and only after a building survey decides retention, adaptation, infill, or removal. FAR, height, density, and setbacks remain unknown.

03 THREE WATER-LEARNING COURTS

JING-ZHANG ONE MILLIMETER / 03

THREE COURTS • ONE PROTOCOL • THREE VALIDATIONS

01 QINGHE WATER-LEARNING COURT
porous materials · safety validation · low-carbon exchange
announced approx. 192.1 ha · displayed geometry is provisional

02 ORIGIN OPEN-SOURCE WATER COURT
university transfer · open release · talent services
announced approx. 104.3 ha · displayed geometry is provisional

03 DAZHONGSI POROUS CIVIC ROOM
station-city links · global demo · dry/wet stage
announced approx. 72.0 ha · displayed geometry is provisional

PROVISIONAL ROUGH GEOMETRY • NOT A STATUTORY REDLINE OR CAPACITY CLAIM

04 AI ECOSYSTEM, SIX PERSONAS, TWELVE SCENARIOS

12 SCENARIO CARDS

rain bulletin · post-rain work order · porous-material A/B · tree-pit care · accessible reporting · comfort route · heritage rain sound · robot stop rule · event risk · open-test credential · community review · open-source festival

05 THREE-STATE PUBLIC SPACE

JING-ZHANG ONE MILLIMETER / 04

USEFUL WHEN DRY • LEGIBLE IN RAIN • RECOVERABLE AFTER

01 DRY

walk • cycle • learn • gather

02 RAIN

show runoff path and risk level

03 AFTER

human review • work order • repair • publish

slow mobility → aggregated environmental data → authorised review → reversible spatial action

PROVISIONAL ROUGH GEOMETRY • NOT A STATUTORY REDLINE OR CAPACITY CLAIM

06 METRIC STATES AND THREE PHASES

JING-ZHANG ONE MILLIMETER / 05

METRICS WITHOUT PRETENCE: KNOWN, PROVISIONAL, PROPOSED, UNKNOWN

overall design area	approx. 11.4 km ²	official text
key areas	3 / approx. 368.4 ha	official text + provisional geometry
rain stations	12	design commitment
FAR / height	UNKNOWN	pending official controls
stormwater capacity	UNKNOWN	pending survey, soil, network, and model

EPSG:4548 recalculation • manifest hashes • four validation gates

PROVISIONAL ROUGH GEOMETRY • NOT A STATUTORY REDLINE OR CAPACITY CLAIM

- Phase 1: twelve stations and three reversible pilots
- Phase 2: three courts, public ground floors, four landmarks
- Phase 3: expand only after formal planning

07 GOVERNANCE, RISK, AND EXIT

MINIMUM DATA

Collect aggregated environmental and facility state only; no faces, device IDs, or personal traces.

HUMAN DECISION

AI provides explainable suggestions; authorised people decide approval, safety, and service interruption.

REVERSIBLE EXIT

Every pilot has an owner, evaluation period, stop rule, restoration plan, and public retrospective.

MISSING EVIDENCE

Official redlines, elevations, soil, utilities, tenure, building survey, heritage controls, and budget.
