A city open-source main branch on a century-old rail — every step is a commit, every station a release

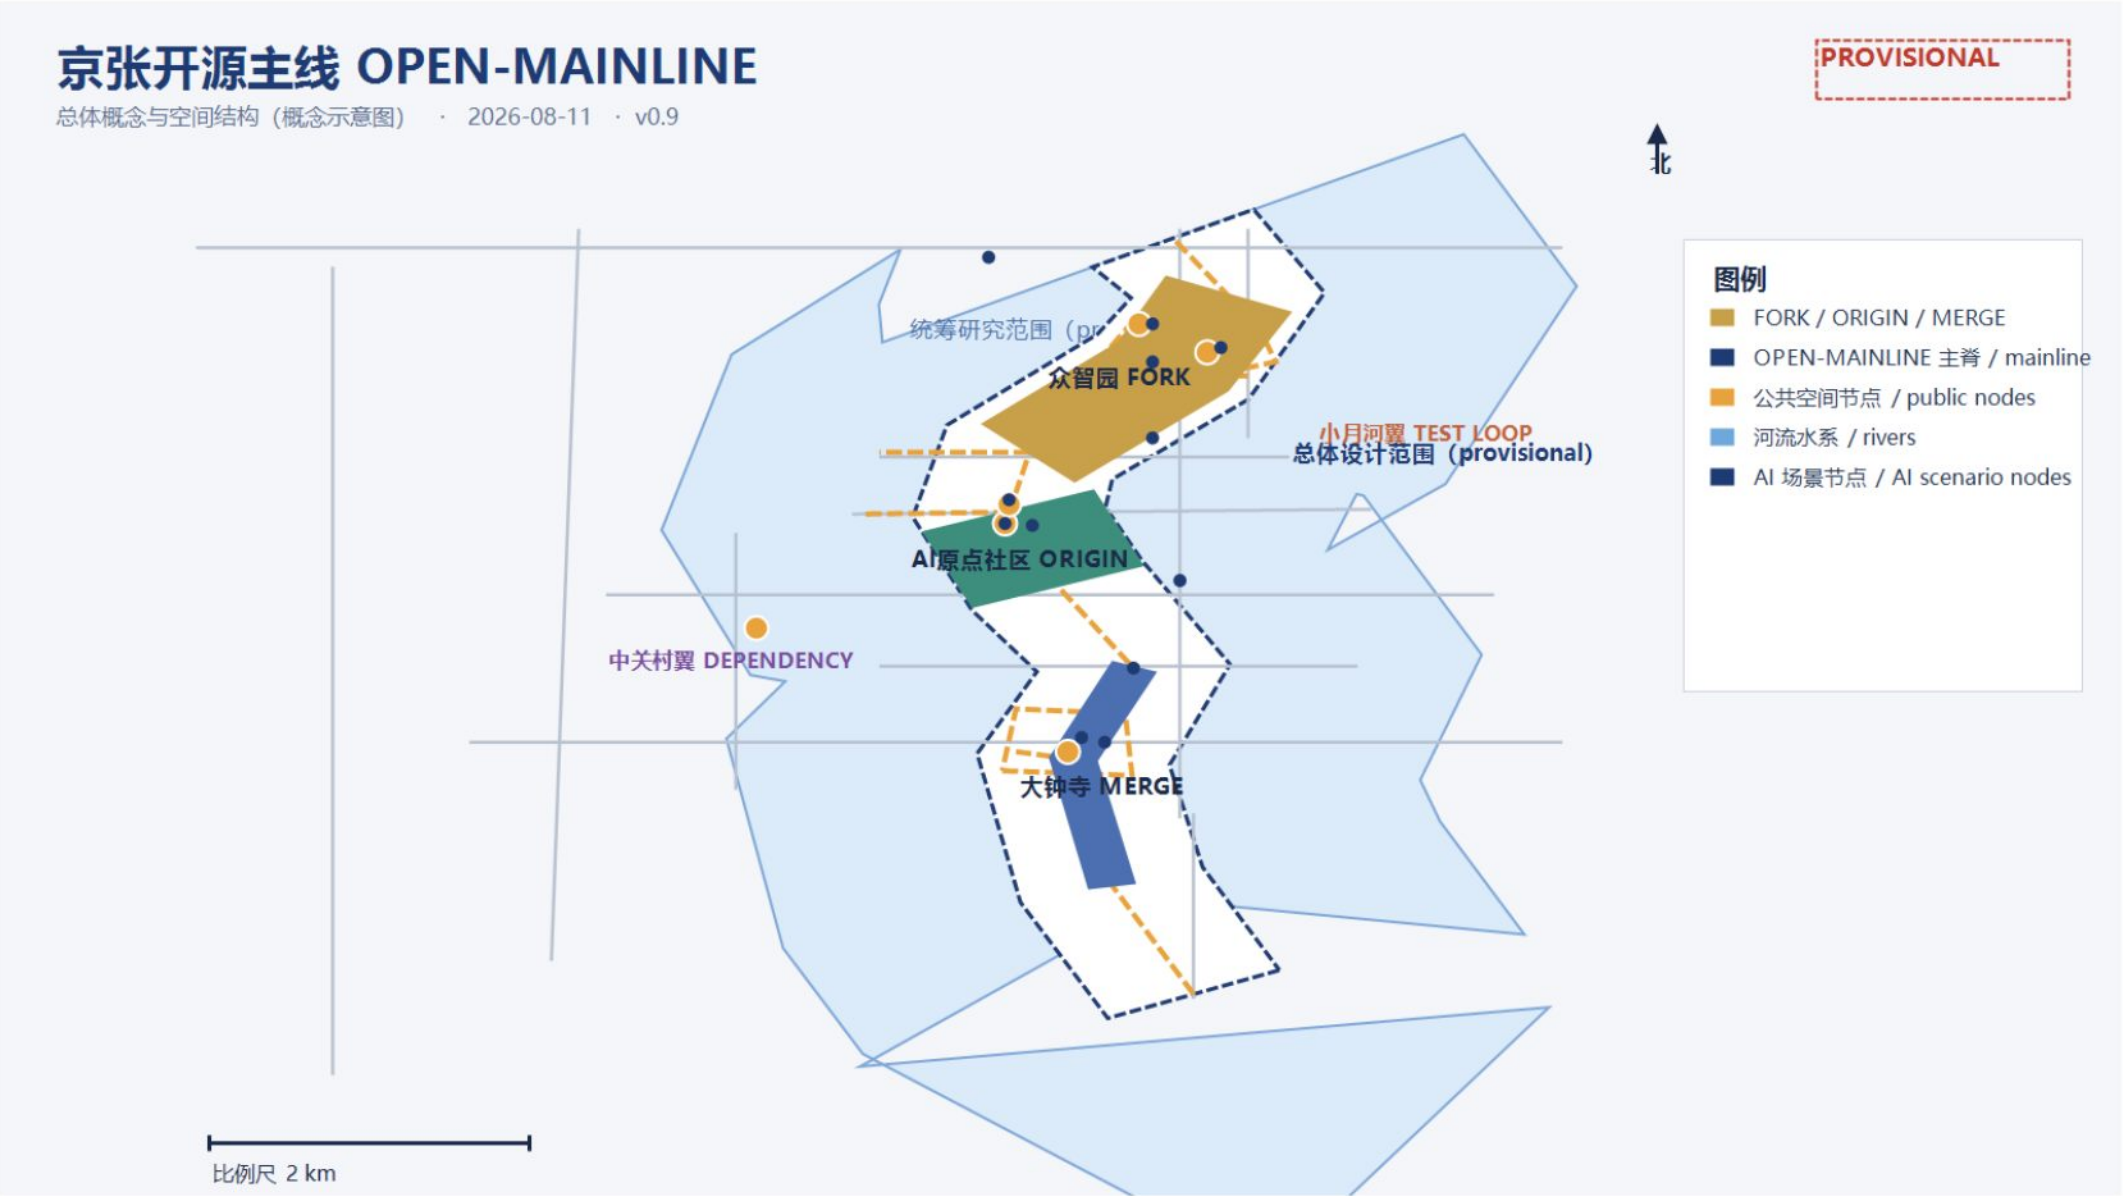

Reading the 9-km Jing-Zhang Railway Heritage Park greenway as a “city open-source main branch” : rails = commit history, stations = release versions, and the three areas and two wings map to FORK / ORIGIN / MERGE / TEST / DEPENDENCY — continuously integrating rail, code, and life.

This is an open co-creation concept design; all spatial conclusions are “conceptual proposals for professional deepening” and do not replace formal planning. No FAR, height, retain-renovate-demolish, road redline, or engineering conclusions are given.
