

JING-ZHANG AIR GAUGE

FROM STEAM TO BREATH

AIR-EXPOSURE EQUITY INFRASTRUCTURE WITHOUT PERSONAL PROFILING

The Jing-Zhang Railway Heritage Park becomes a public Evidence Spine linking collocation, route and space comparison, an Indoor Air Evidence Room, and product-claim review in a reversible and recalculable urban-design system.

Three Scales & One Air Evidence Spine

Provisional extents organize the concept; they do not replace statutory boundaries, surveys, or monitoring

One evidence spine links three action segments.

Reference-monitor collocation, non-personal route comparison, Indoor Air Evidence Room verification, and product-claim tests share a reversible and recalculable public-evidence protocol.

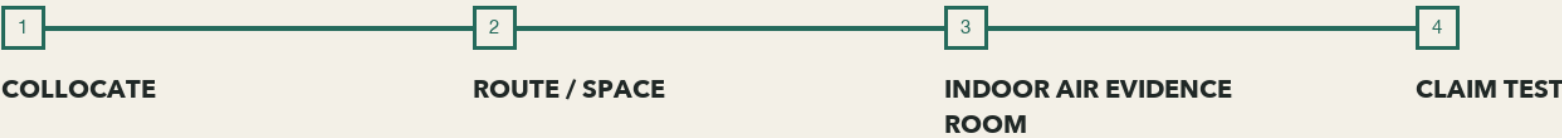

PROVISIONAL ROUGH EXTENT / NOT A REDLINE

Overall working design extent 11.41 km²

Air Evidence Spine 9.72 km

Scenario test nodes 12 NODES

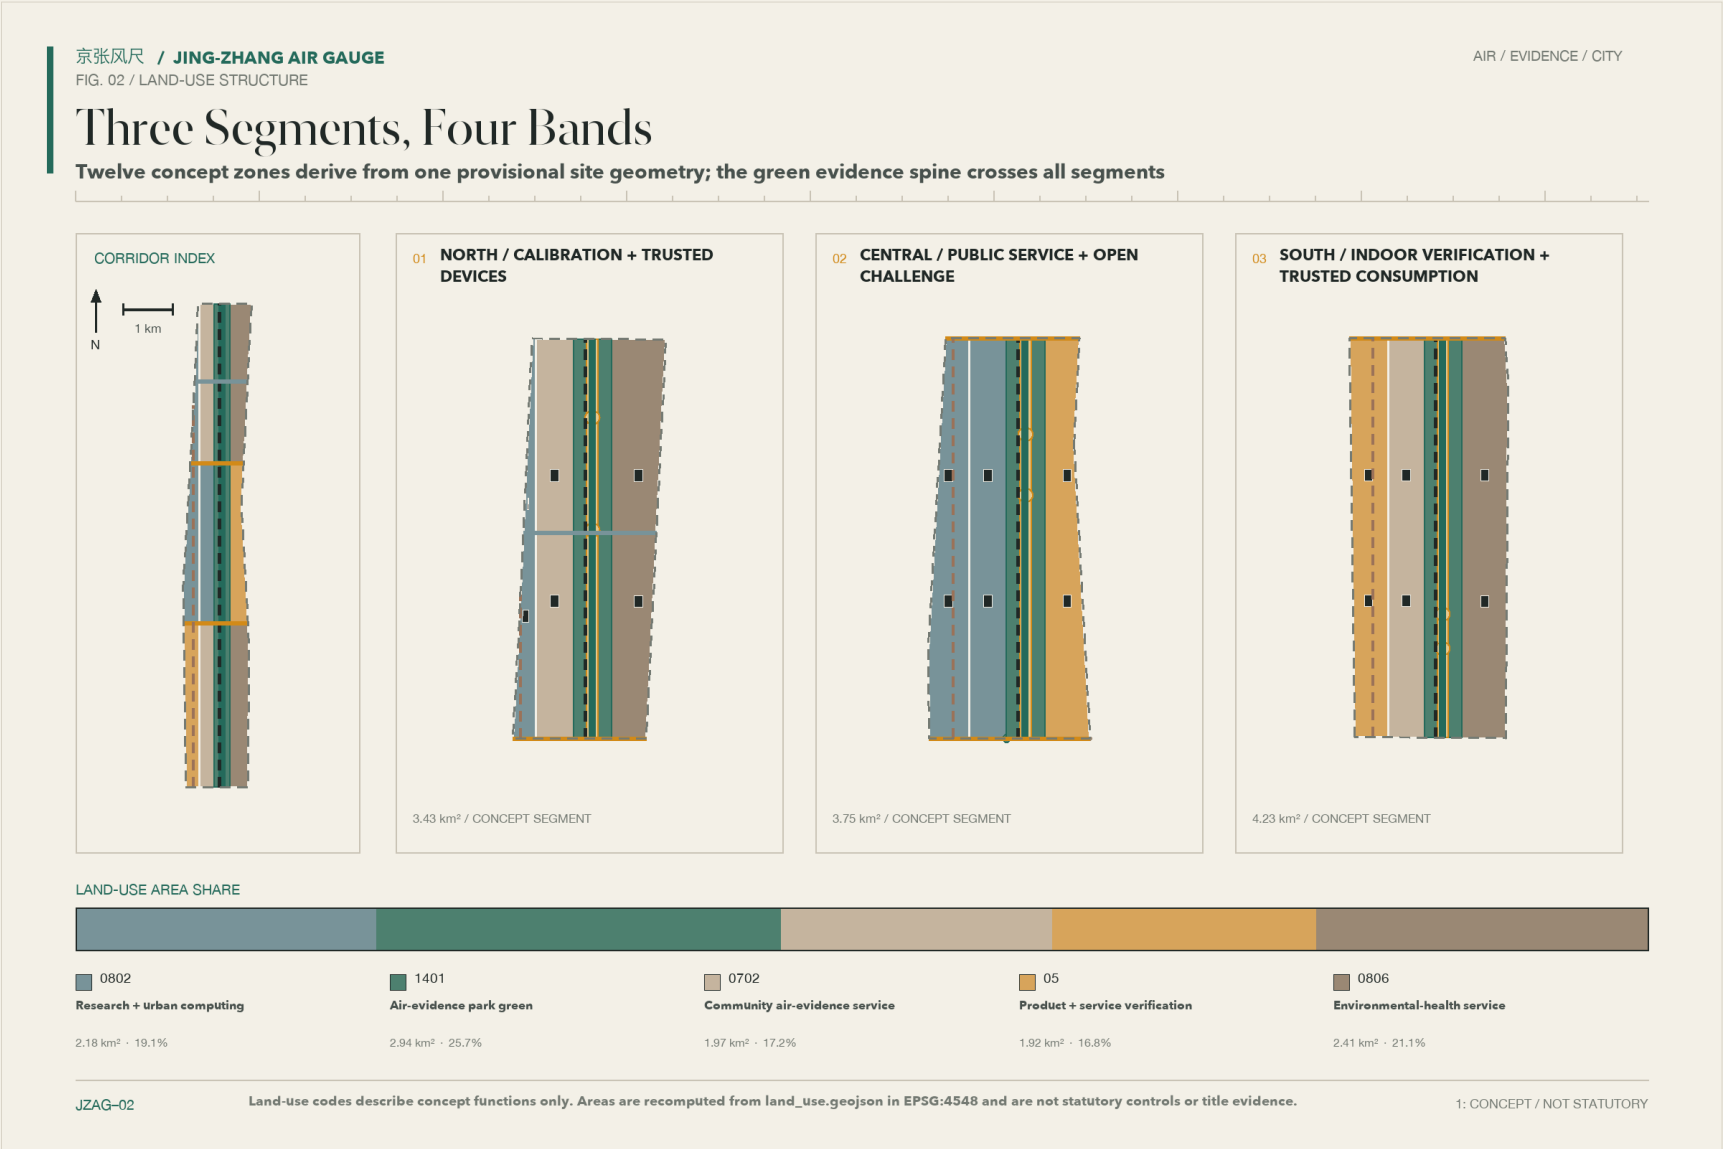

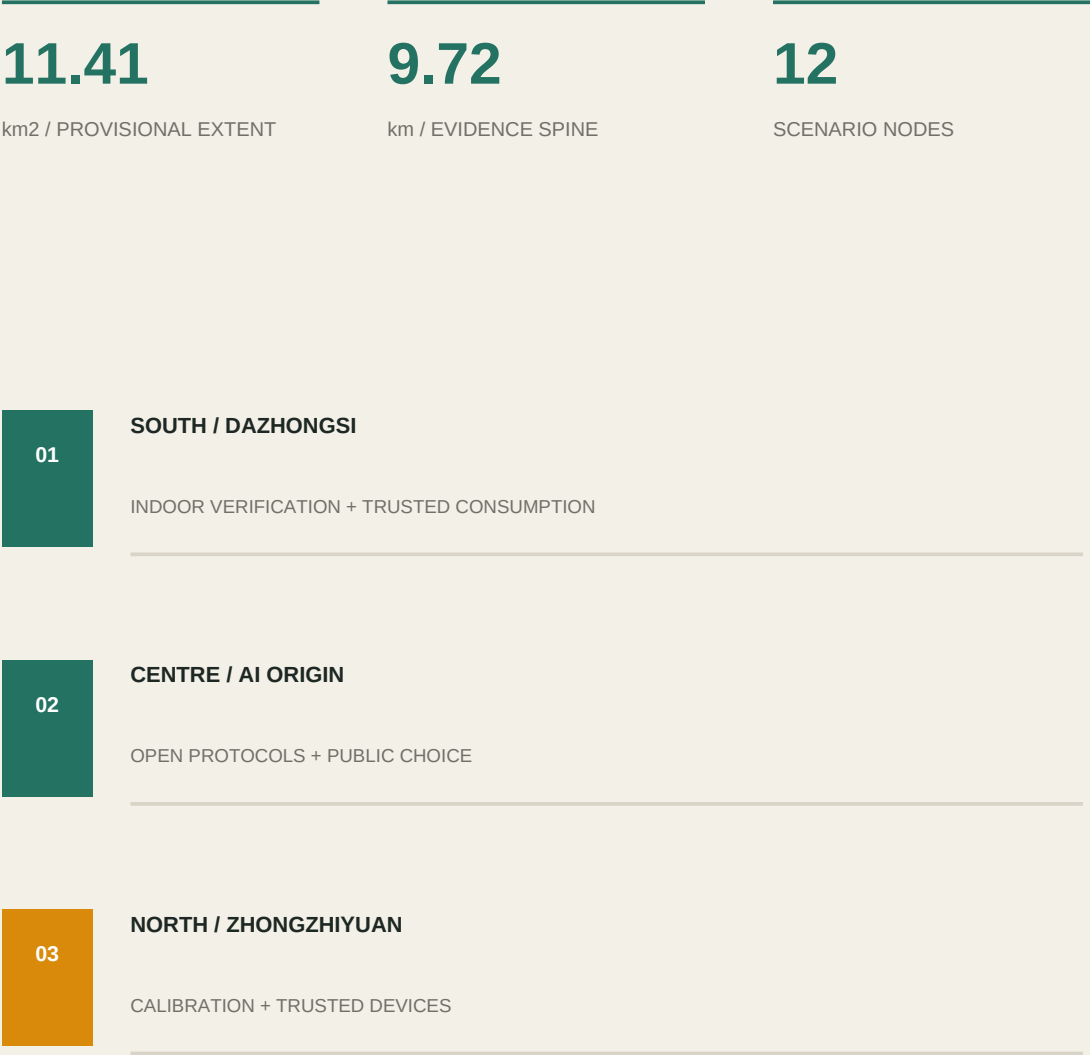

Key-area proxy extents 3 AREAS

No faces, voiceprints, device identifiers, health records, or personal trajectories are collected.

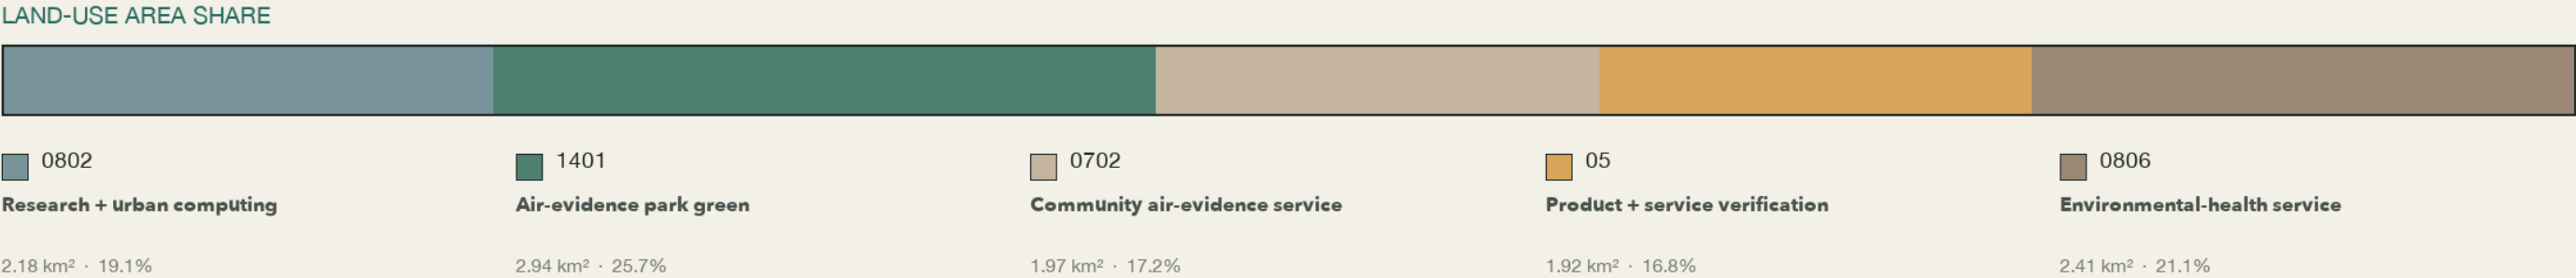

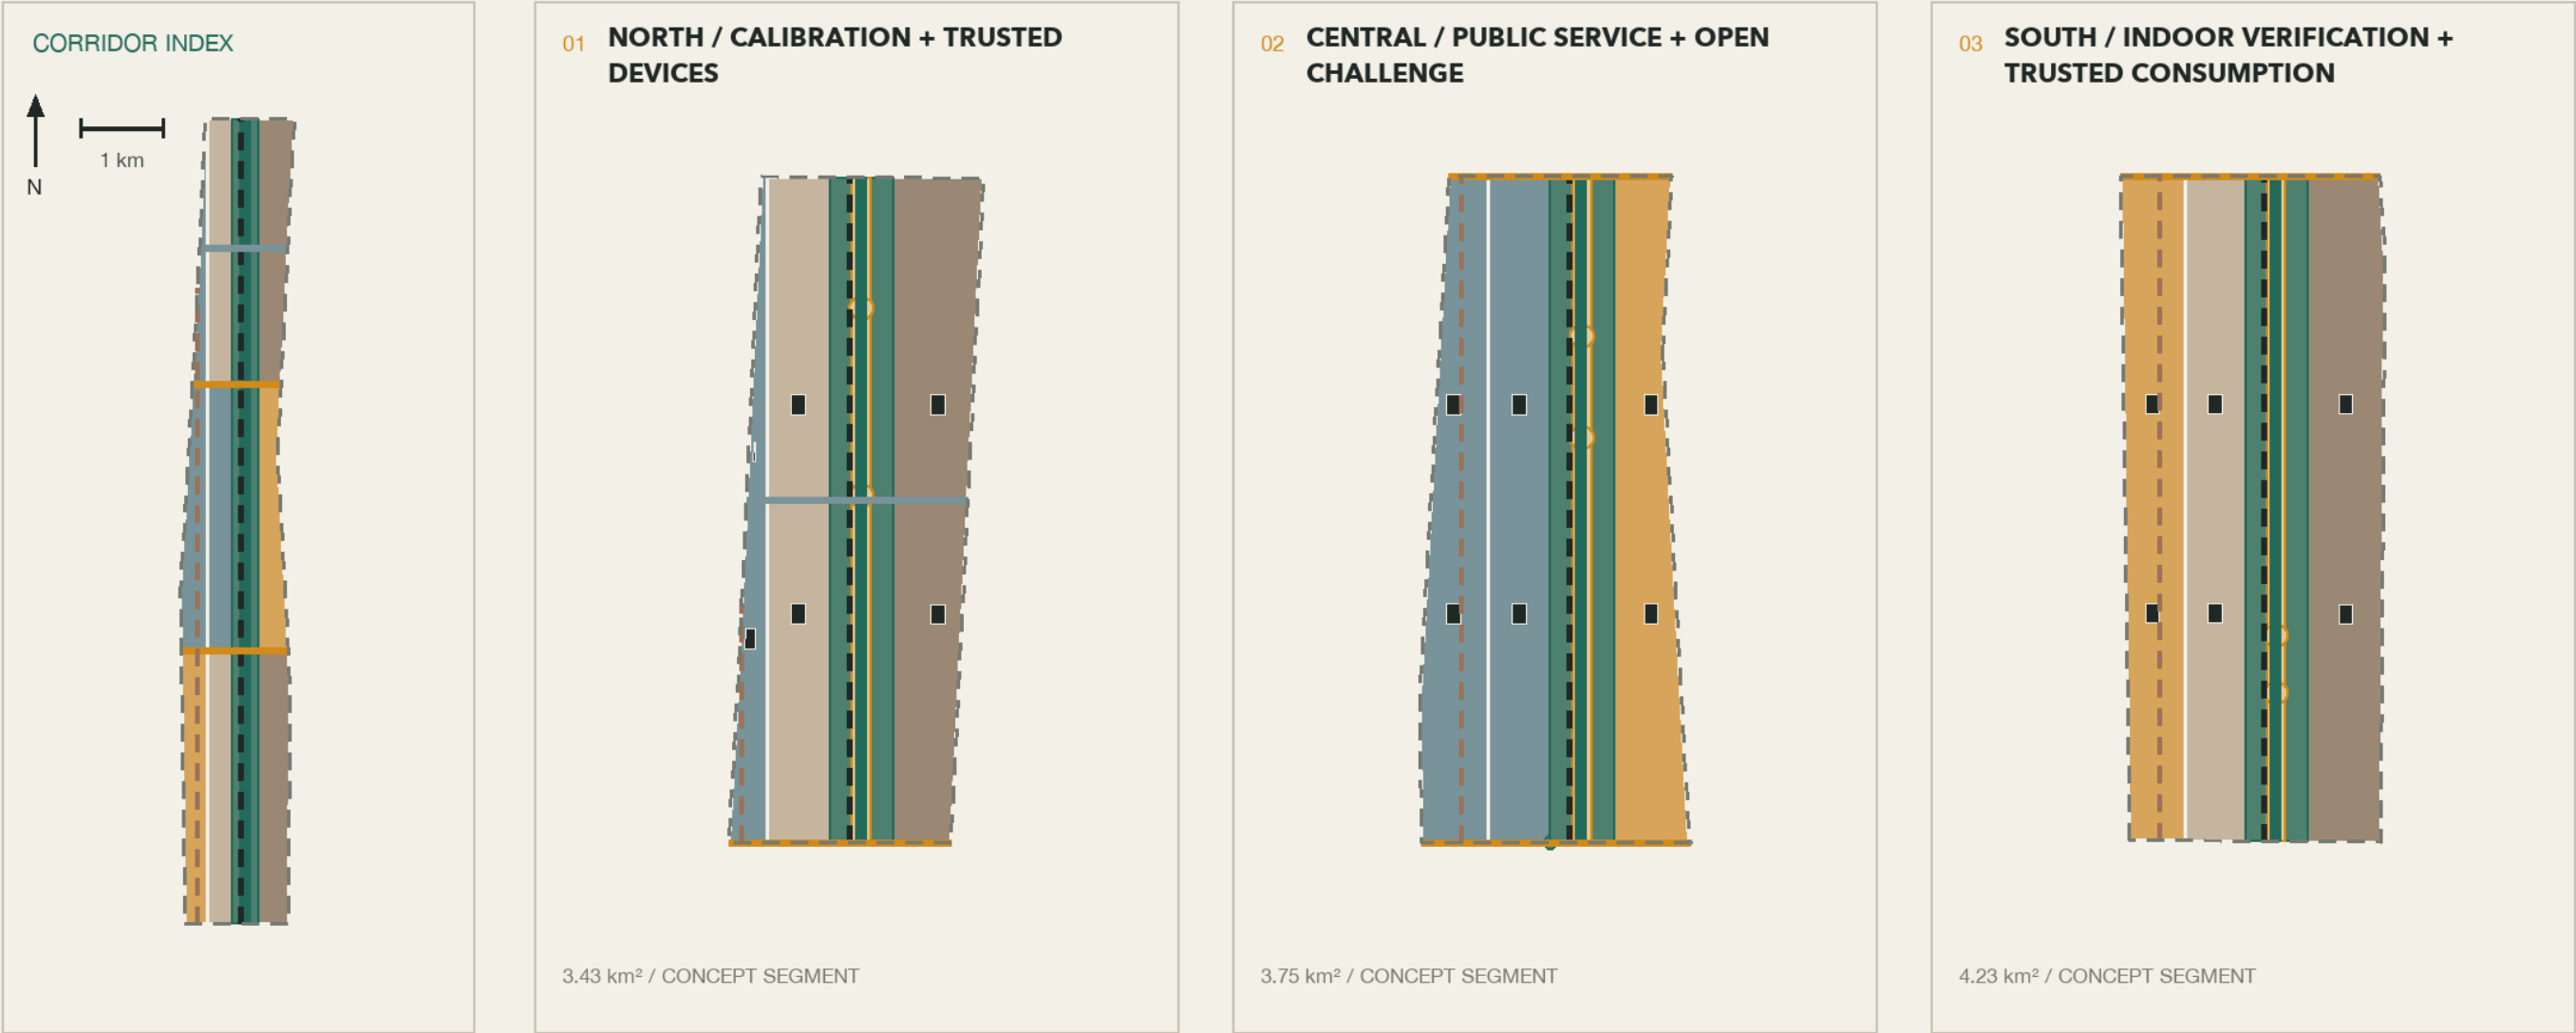

OVERALL STRATEGY / ONE PUBLIC EVIDENCE SPINE

Three Zones and Two Wings divide responsibilities along a north-south Evidence Spine. Three east-west links repair walking, cycling, transit, and Xiaoyue River connections. The layers express design relationships, not statutory road lines, ownership, or controls.

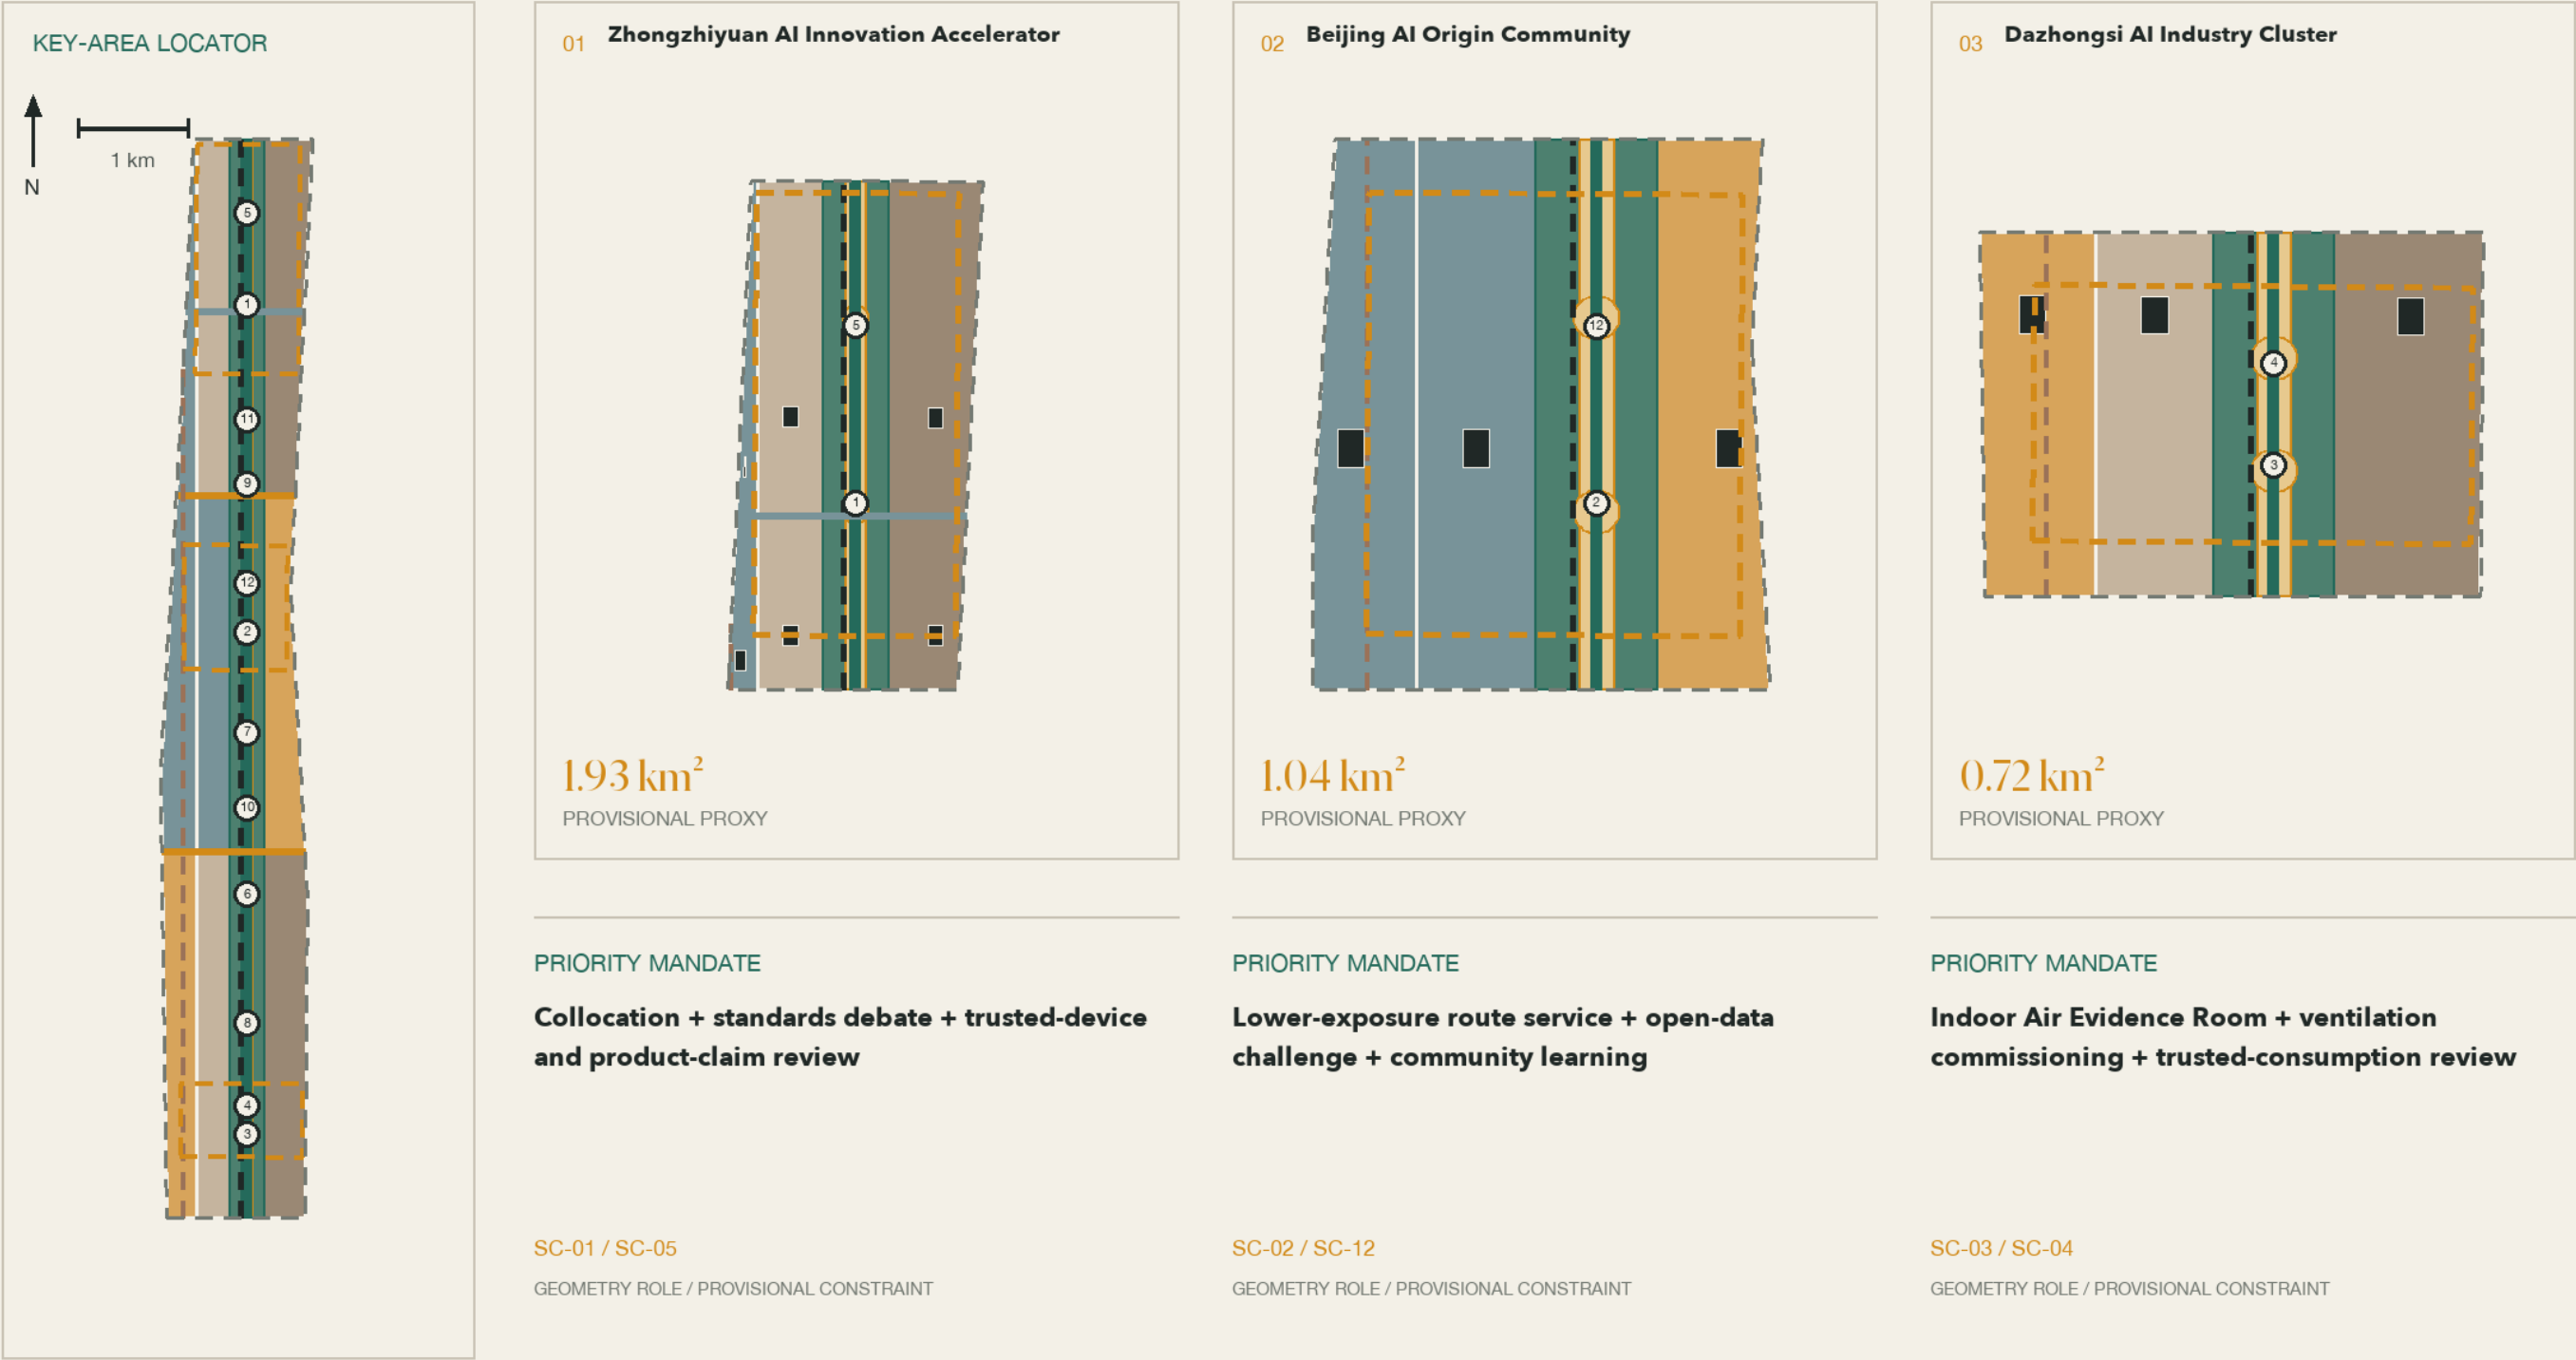

Three Segments, Four Bands

Twelve concept zones derive from one provisional site geometry; the green evidence spine crosses all segments

Three Key Areas, Three Test Mandates

Rough proxy extents locate design actions only; enlargements do not fabricate parcels, title, or statutory controls

TWELVE SCENARIO NODES / SIX PERSONAS

Scenarios retain environmental, spatial, and device records only. They collect no face, voiceprint, device identifier, health file, or personal trajectory. Four industry tests require site, safety, data, and Human Review gates.

Mobility, Green Space & Air Evidence

Route comparisons, public space, and calibration nodes share one evidence spine; no water geometry means no invented blue network

NETWORK LEGEND

- Air Evidence Spine**
- Non-personal walking verification route**
- Cross-connections**
- North cycle link**
- Research-service local access**

RECALCULABLE NETWORK

CORRIDOR RELATIONSHIP

01-12 / SOUTH-NORTH

VERIFICATION LOOP

RETEST / RECALIBRATE

PENDING PROFESSIONAL TRANSECTS

- T1 Near-road concentration gradient
- T2 Indoor-outdoor air exchange
- T3 Street-canyon ventilation + transport

METRICS / PHASING / RISKS

Known means recalculable within the submitted concept geometry. It does not mean a statutory existing condition or verified performance. Every outcome field remains to be verified.

RENEWAL PROJECTS

THREE PHASES / DECISION GATES

- 01

NORTH CALIBRATION BASE + ZHONGZHIYUAN PILOT
Establish collocation, maintenance, data tiers, and trusted-device review conditions.
- 02

CENTRAL PUBLIC-SERVICE VERIFICATION
Compare routes and spaces; test legibility, accessibility, and Human Review.
- 03

SOUTH INDOOR VERIFICATION + CORRIDOR REVIEW
Establish indoor evidence, ventilation, and trusted-consumption review before a corridor-wide permission and operations review.

- TO BE PROFESSIONALLY VERIFIED
- 01 OFFICIAL BOUNDARY + STATUTORY CONTROLS
- 02 SITE PM2.5 / NO2 / O3 BASELINE
- 03 EXPOSURE REDUCTION + HEALTH BENEFITS
- 04 INDOOR COMPLIANCE + UTILITY CAPACITY
