

COMMONS LINE Spatial Evidence Overview

One civic innovation spine, three validation districts

1 / 3 / 5 / 10

- One spine
- Three civic rooms
- Five personas
- Ten AI scenarios

GeoJSON is authoritative.
Figures support reading but
do not replace geometry,
metrics or matrices.

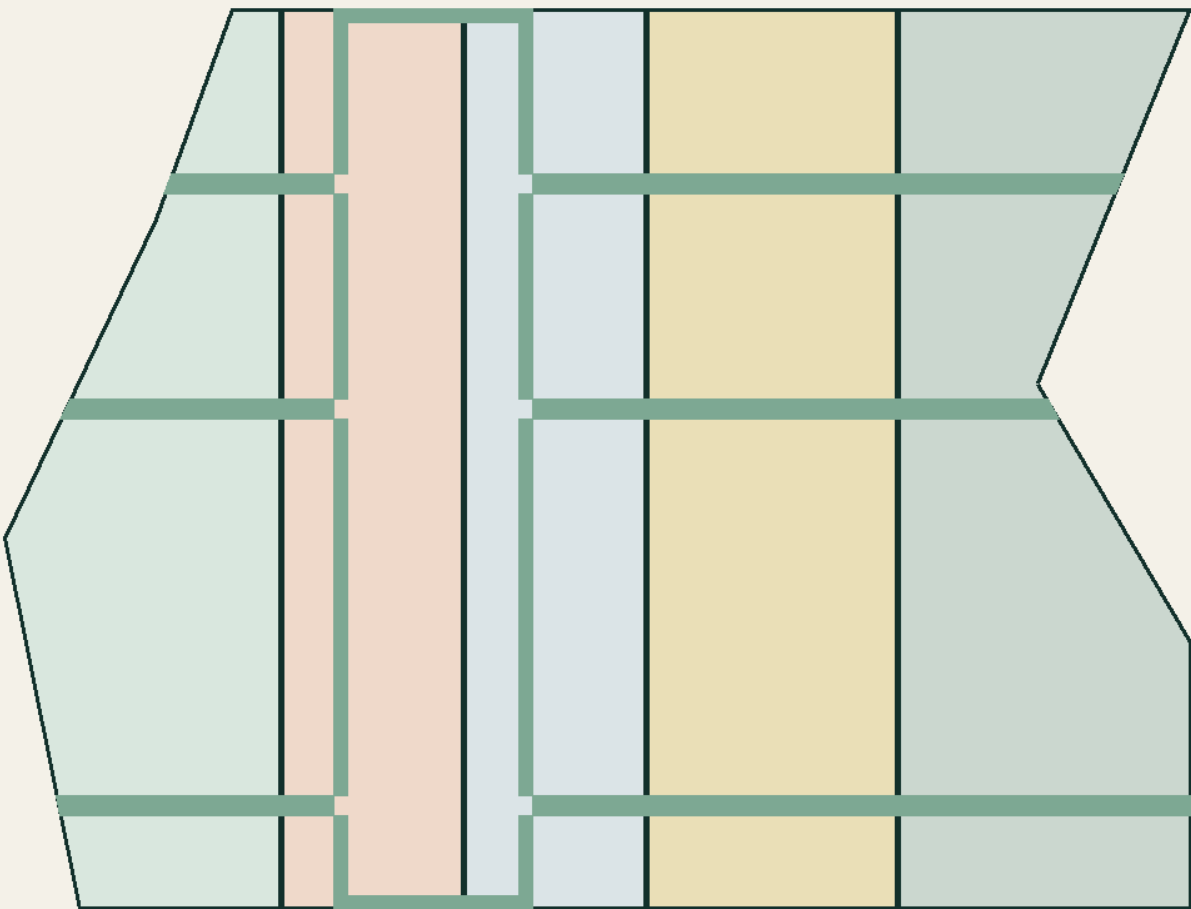

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.

One civic innovation spine links
three key areas into an
accountable urban commons.

Conceptual reference pending official data and
professional development.

Five Land-Use Zones and Civic Innovation Spine

Complete partition with blue-green and public-space overlays

- Open research and validation
- Jing-Zhang heritage park spine
- Public culture and open-source exchange
- Industry services and AI-native commerce
- Community and talent services

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.

Five continuous zones cover the provisional boundary with blue-green and public-space overlays.

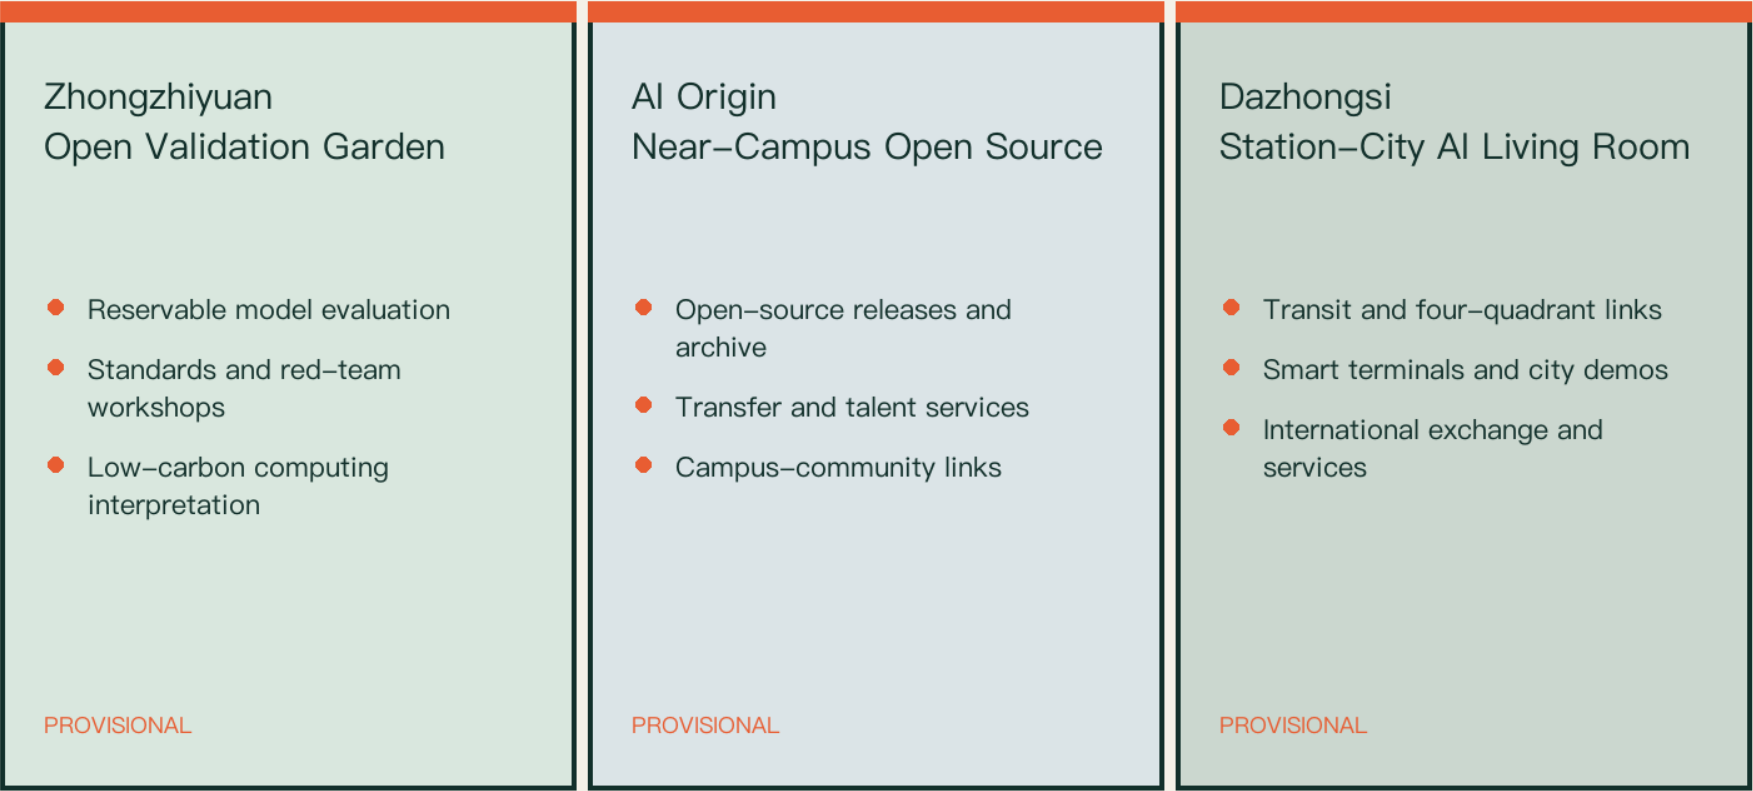

Conceptual reference pending official data and professional development.

Three Distinct Key–Area Concepts

Validation garden, open–source district, station–city living room

Each key area carries a distinct industry, community and validation role.

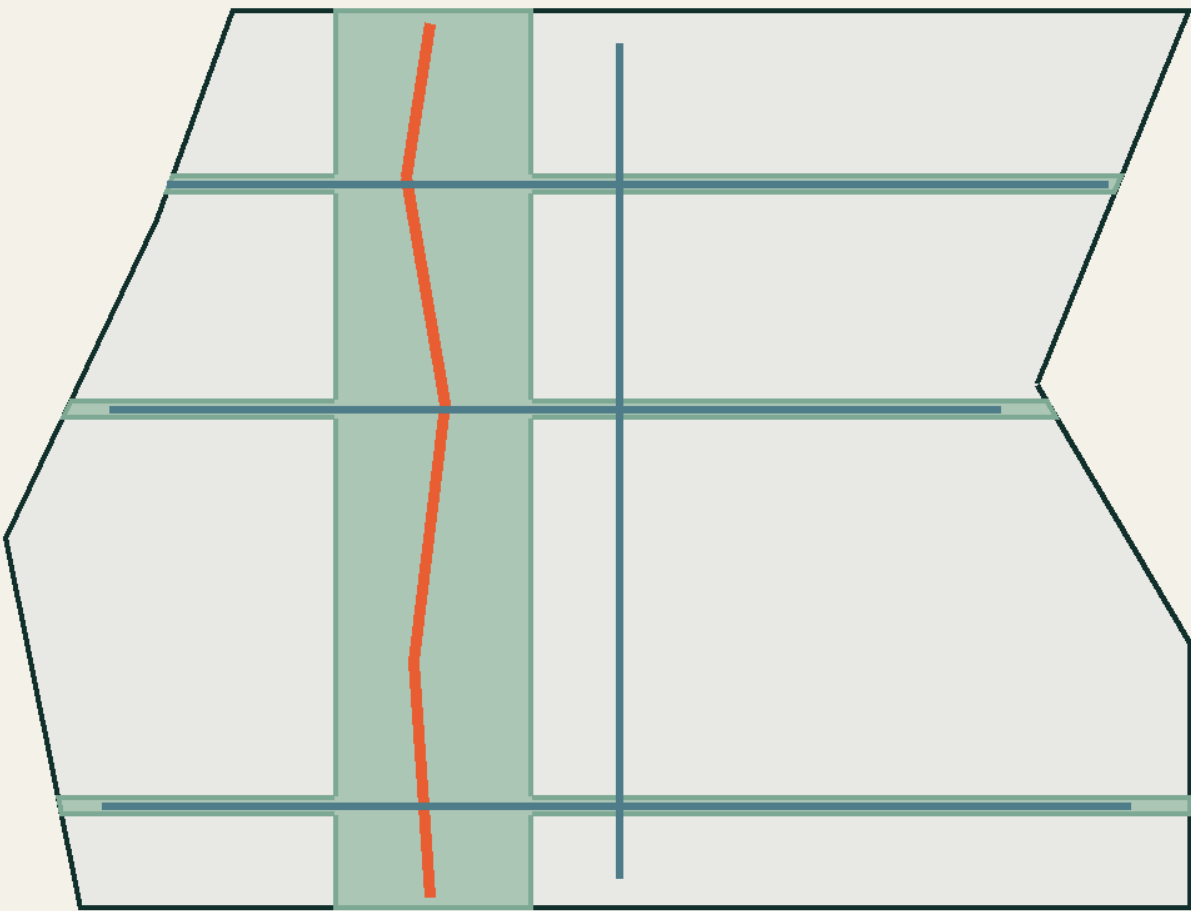

Conceptual reference pending official data and professional development.

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.

Mobility, Blue-Green and Public-Service Network

One north-south spine, three transverse stitches, one micro-loop

- Heritage slow-mobility spine
- Transverse stitches and micro-loop
- Ecology and public space

Design lines show relationships, not road redlines or engineering alignments.

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.

Every scenario includes human accountability, exit and a non-digital service path.

Conceptual reference pending official data and professional development.

Metric Recalculation and Uncertainty

Recomputable values without overstated precision

SITE AREA

11.413km²

Official approximate figure 11.4 km²

GREEN

24.233%

PUBLIC

8.192%

All three values are recomputed from submitted geometry at low confidence. Positional accuracy awaits official polygons.

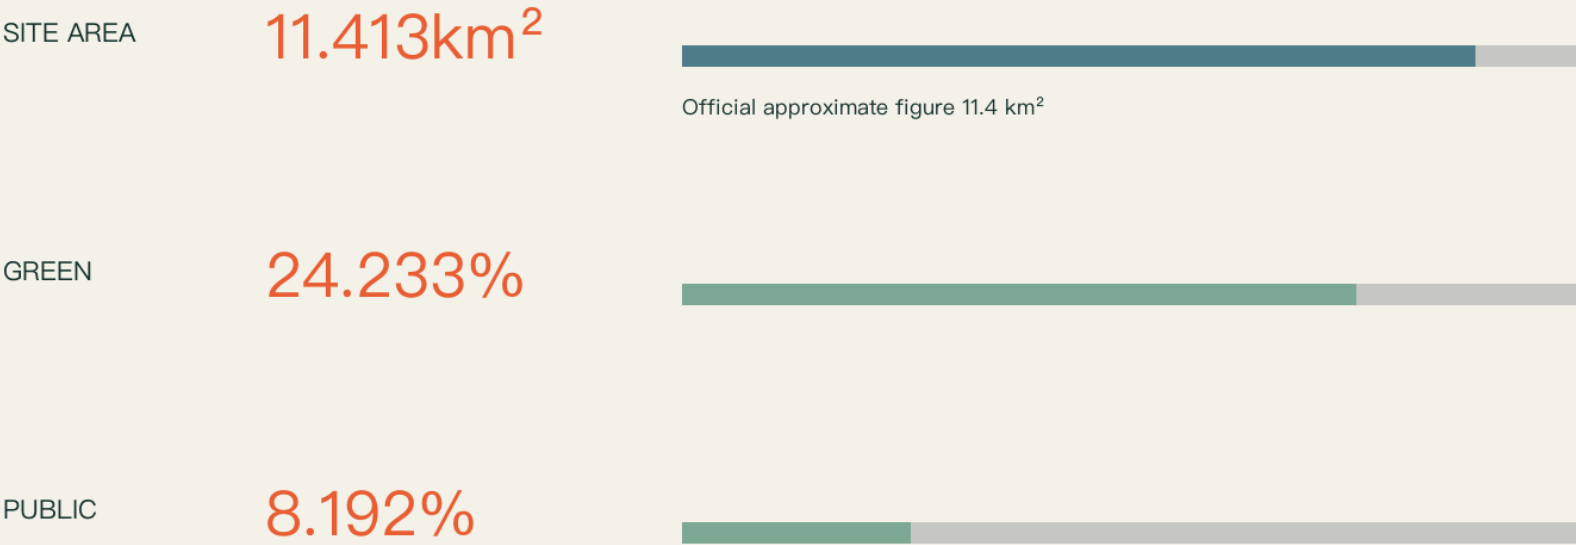

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.

Near-term reversible pilots precede surveys, controls and long-term integration.

Conceptual reference pending official data and professional development.

Metric Recalculation and Uncertainty

Recomputable values without overstated precision

All three values are recomputed from submitted geometry at low confidence. Positional accuracy awaits official polygons.

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.
