

A3 Detail Booklet 1/3 - conceptual land-use zoning (provisional boundary)

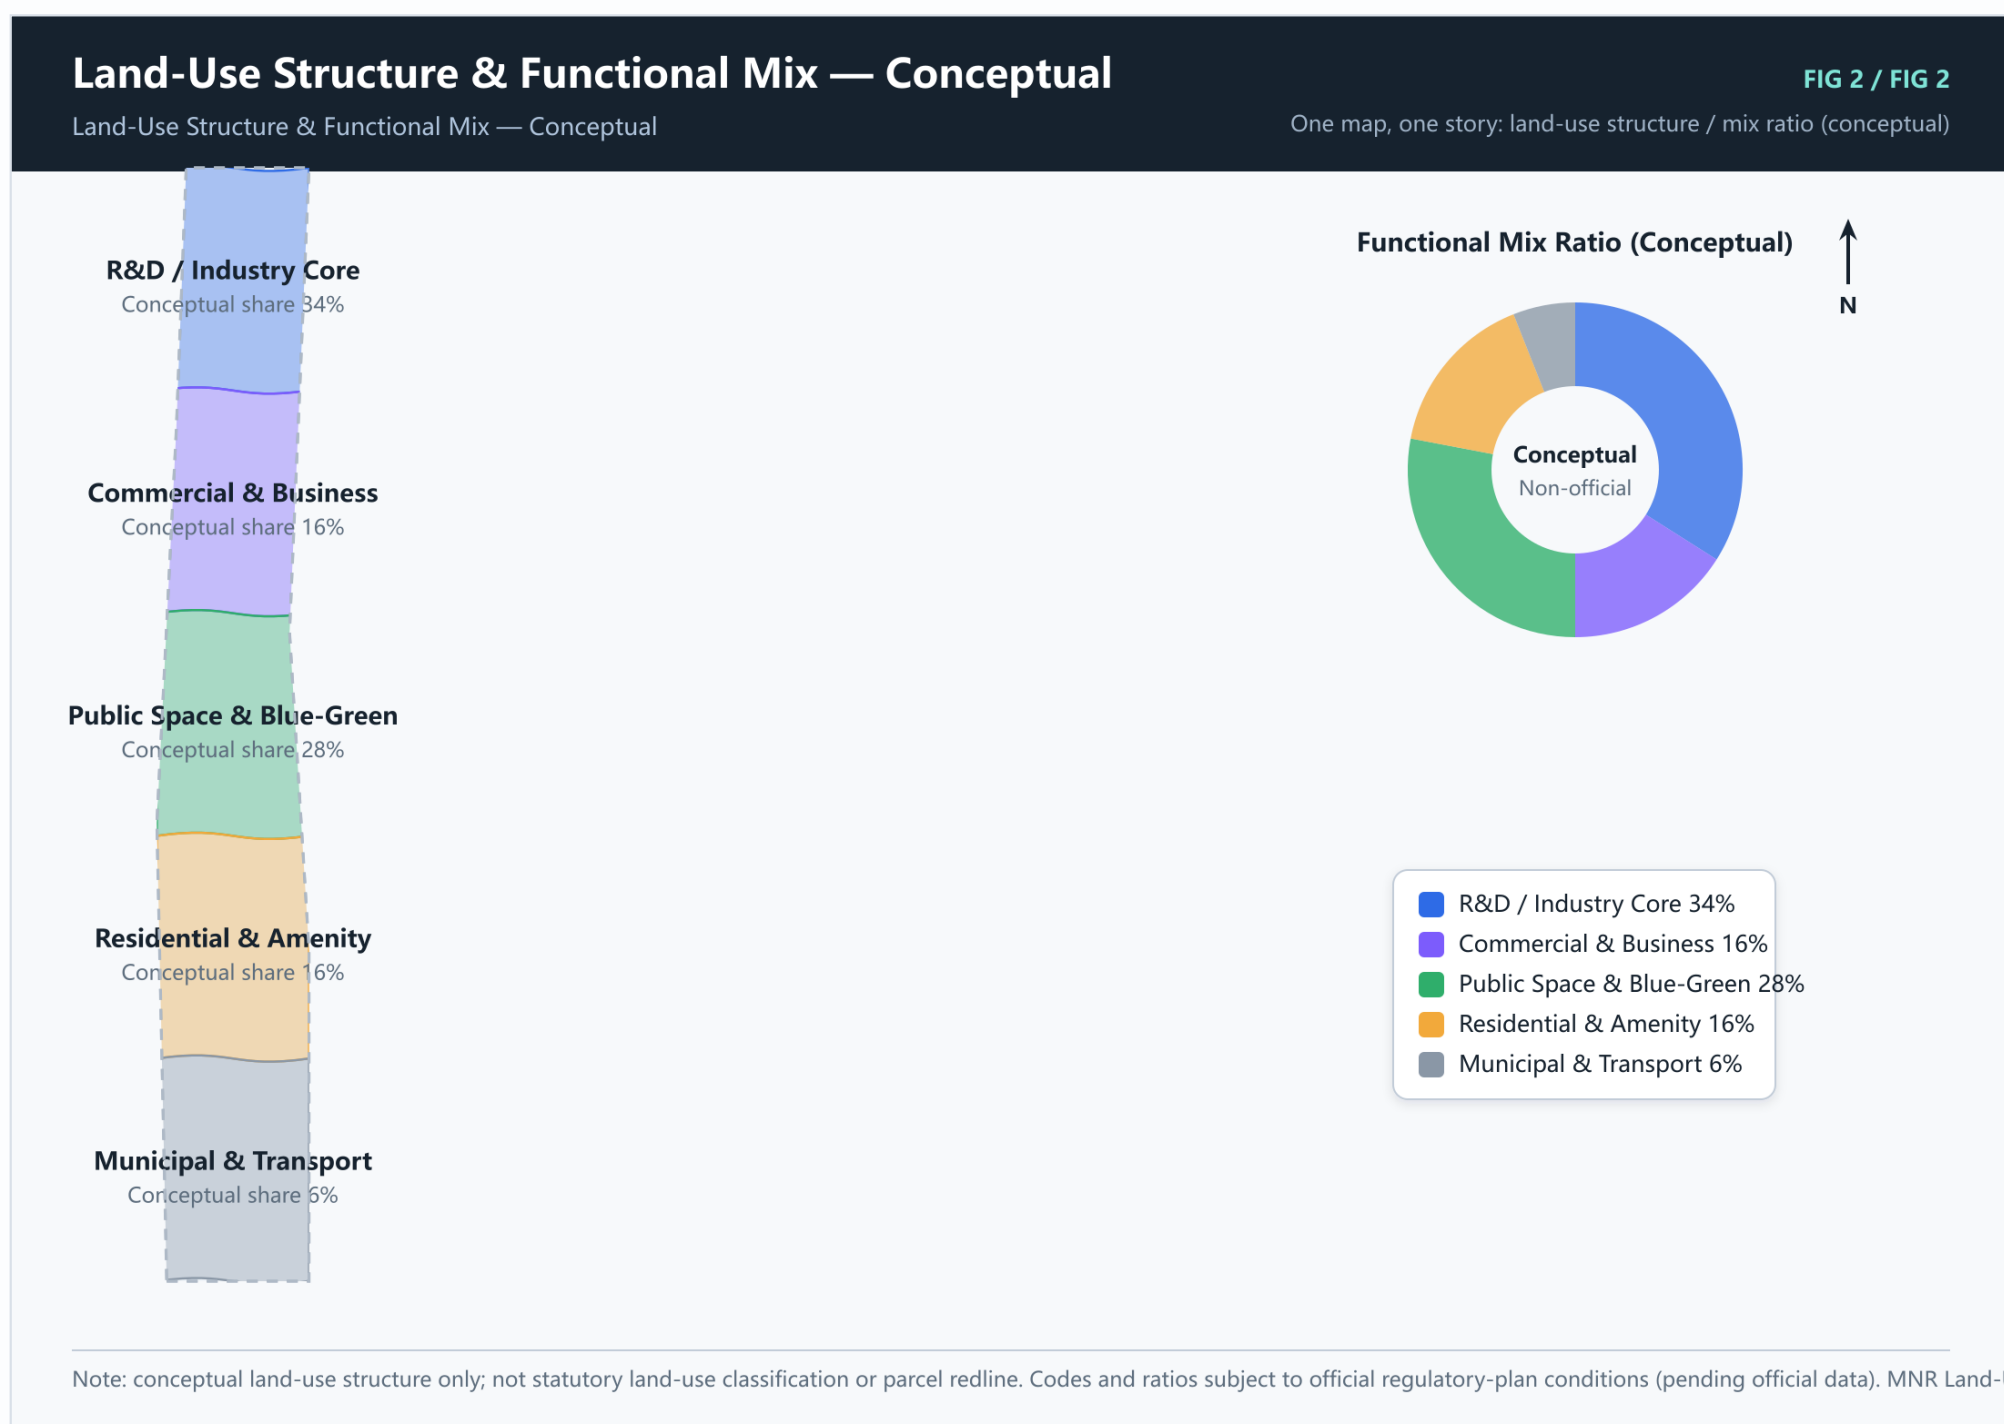

Fig 2 Conceptual land-use structure and innovation-ecology zoning; zone areas recomputed in EPSG:4548 as a conceptual proposal, not a statutory land-use allocation.

Key Notes

- The land-use strategy follows mixed, adaptable and shareable principles, prioritising innovation functions and public services along rail stations and the heritage park.
- Industrial land avoids the single mega-compound model, encouraging small-to-medium blocks with open ground floors for scenario retrofits and temporary uses.
- All ratios are conceptual targets and must be re-verified once official control conditions are available.

Slow Mobility - Blue-Green Network - Scenario Empowerment

A3 Detail Booklet 2/3 - slow mobility & public space concept (provisional boundary)

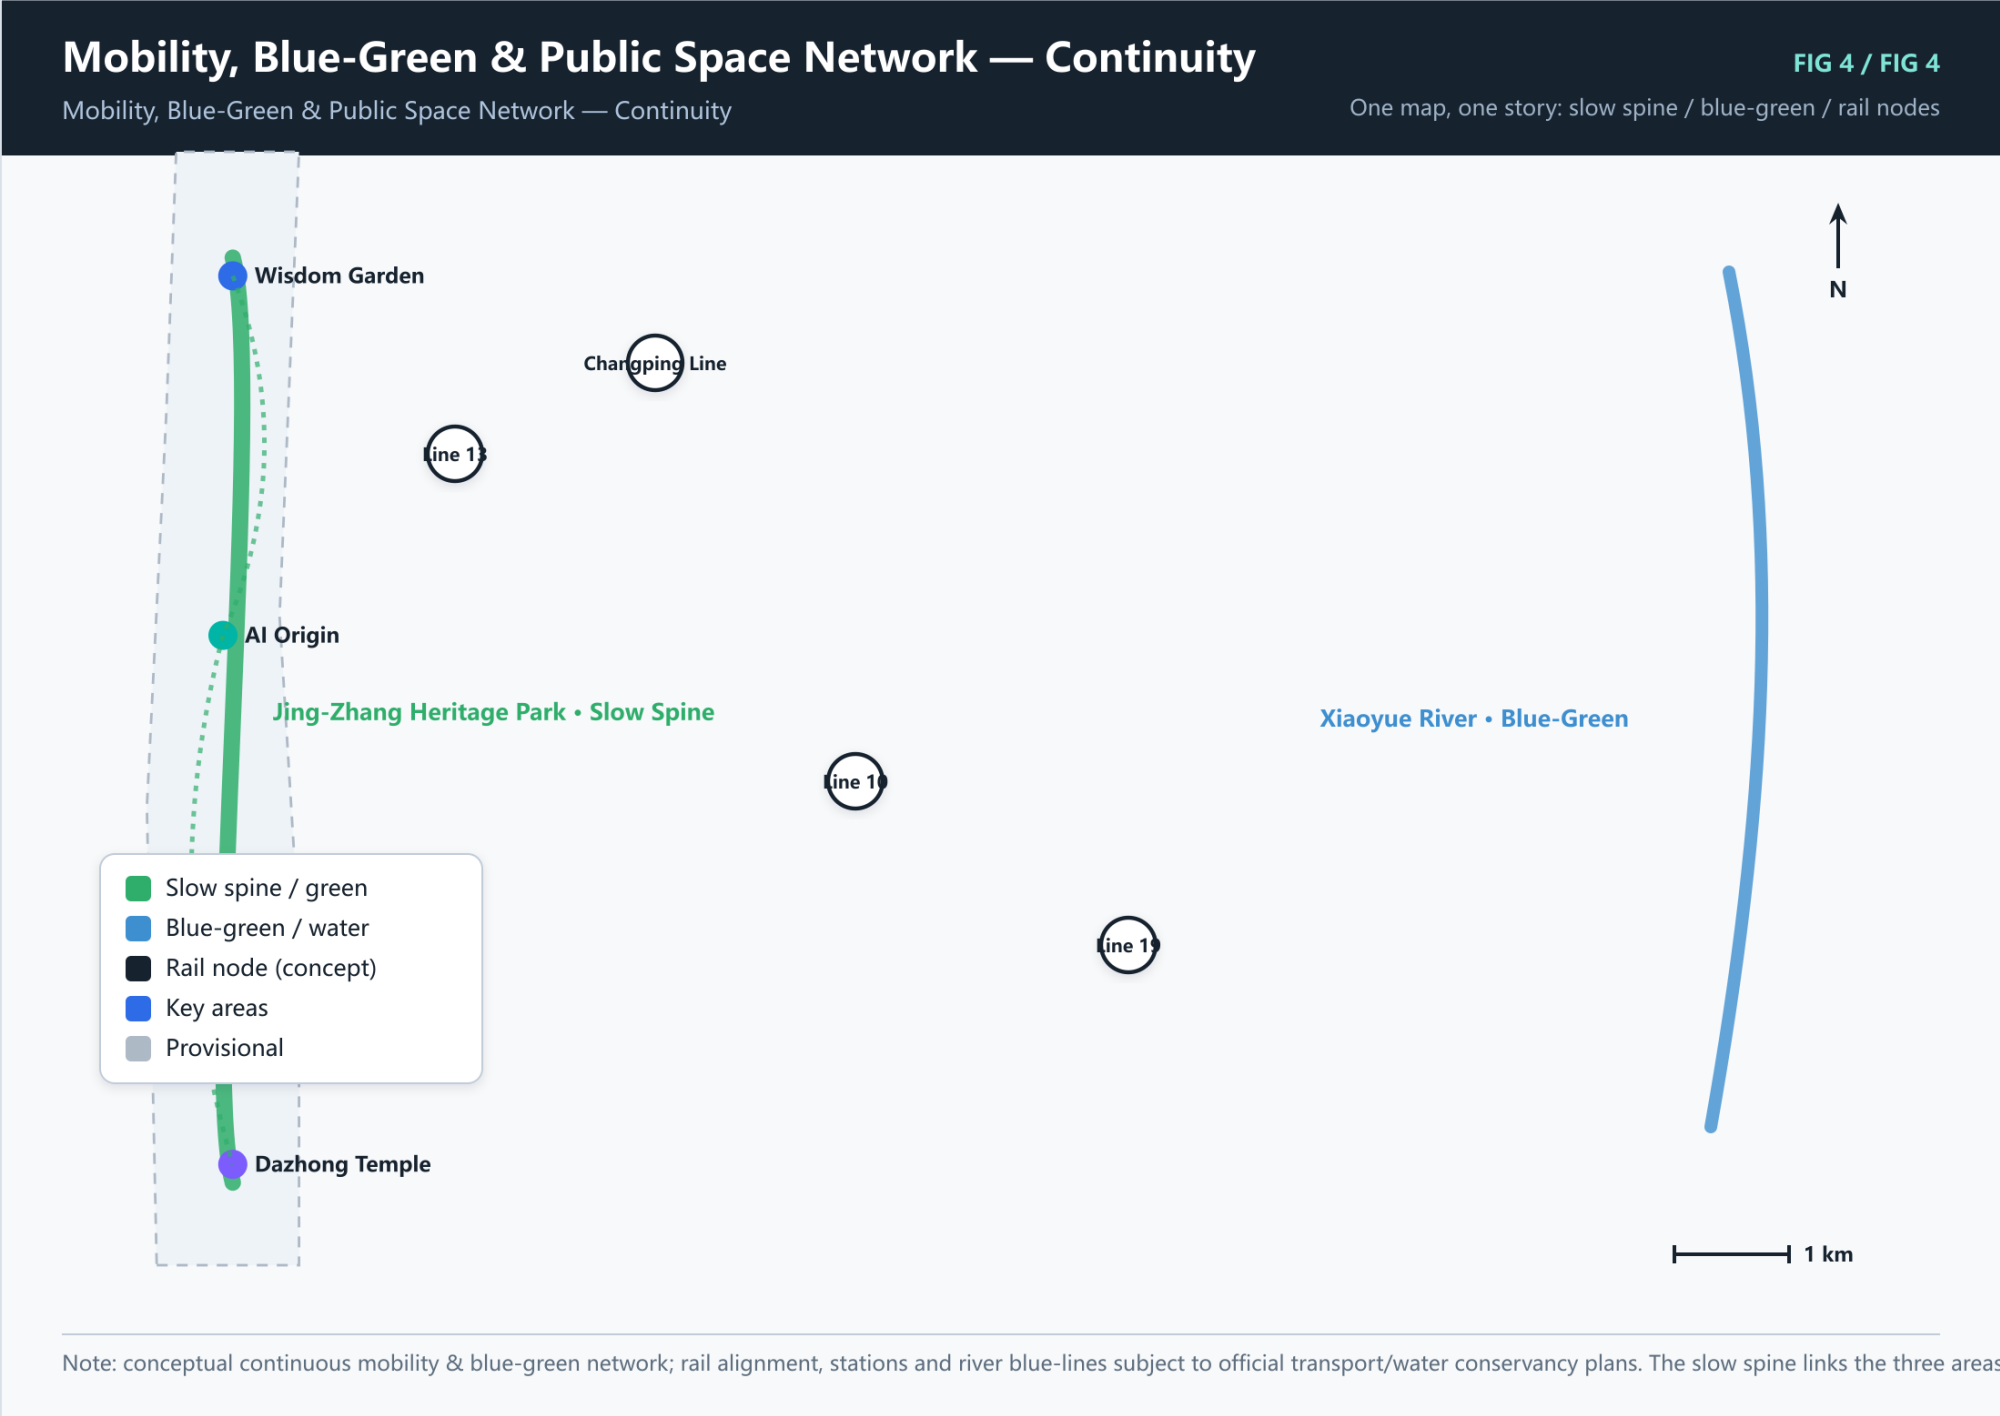

Fig 4 Slow-mobility spine, blue-green network and scenario-empowerment wings; rail alignments, stations and river blue lines are conceptual and subject to official sector plans.

Key Notes

- The Jing-Zhang heritage park forms the north-south green spine and the Xiaoyue River the eastern blue-green corridor, together making a continuous slow-mobility and public-space loop.
- Slow-mobility breakpoints, crossings and step-free continuity require site survey and a transport sector review in the next stage.
- AI navigation and sensing follow data minimisation: no personal trajectory collection and no resident profiling for commercial recommendation.

Key Areas & Metric Evidence

A3 Detail Booklet 3/3 - key-area concepts & self-check

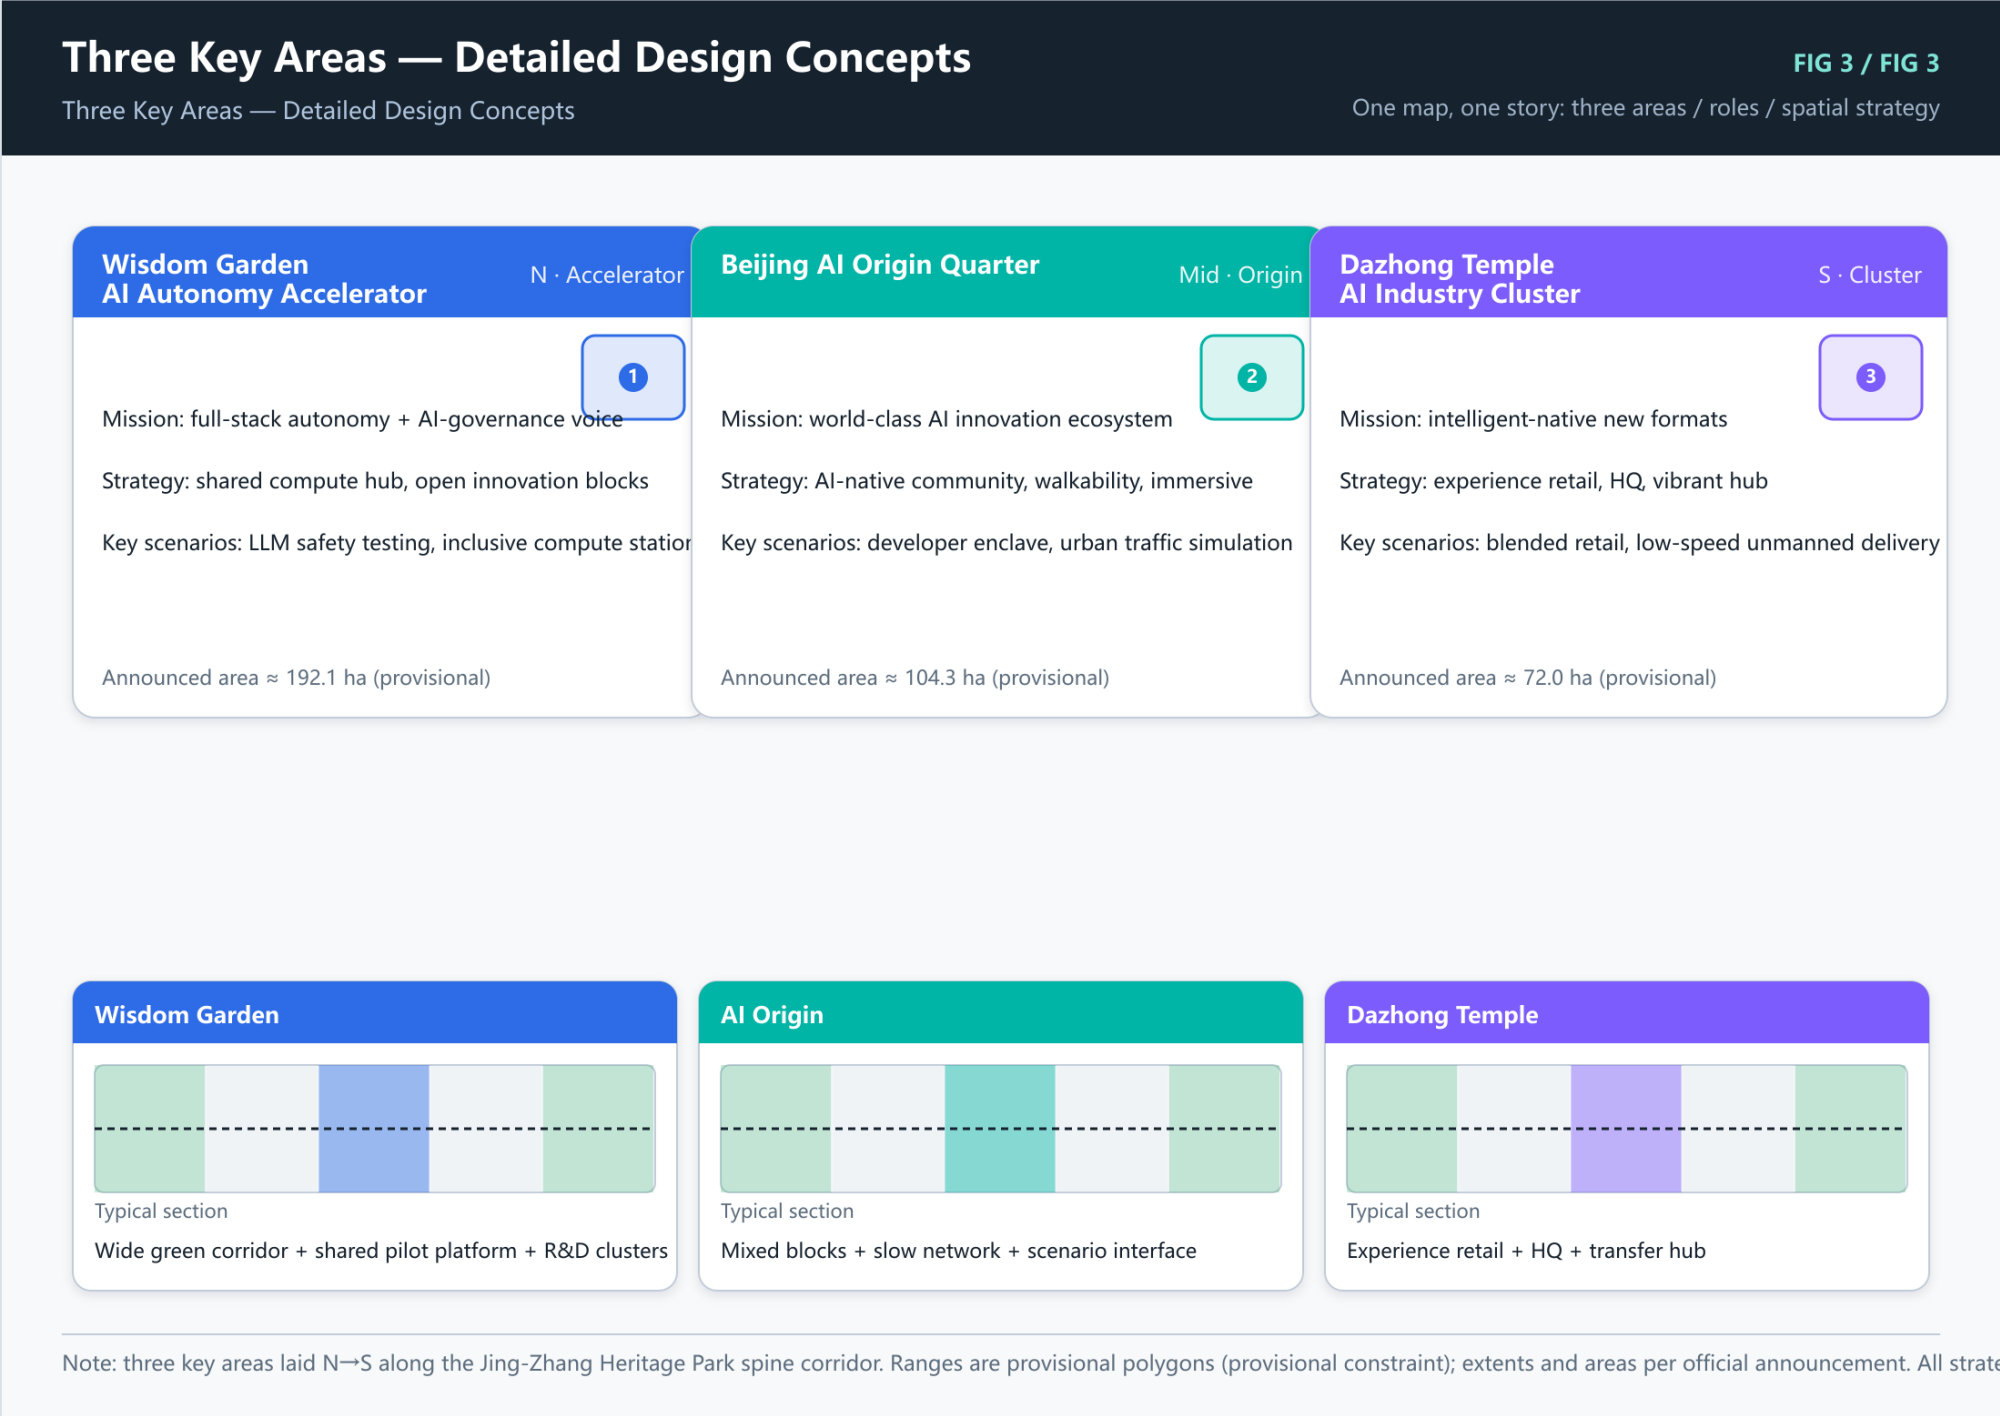

Fig 3 Detailed design concepts for the three key areas (provisional extents): Wisdom Garden, Beijing AI Origin Quarter and the Dazhong Temple area.

Key Notes

- Scenario cards, test/validation scenes and user personas keep unique, consistent IDs, locations and metrics across the proposal text and metrics.json.
- Key-area spatial actions are conceptual placements, to be deepened by professional teams once statutory conditions are clarified.
- The Noto Sans SC (SIL OFL 1.1) glyph subset is embedded so Chinese and English render consistently in any reader.
