

The Ren Belt

A National Innovation Spine Designed for “People”

Urban Design Proposal • Concept Booklet

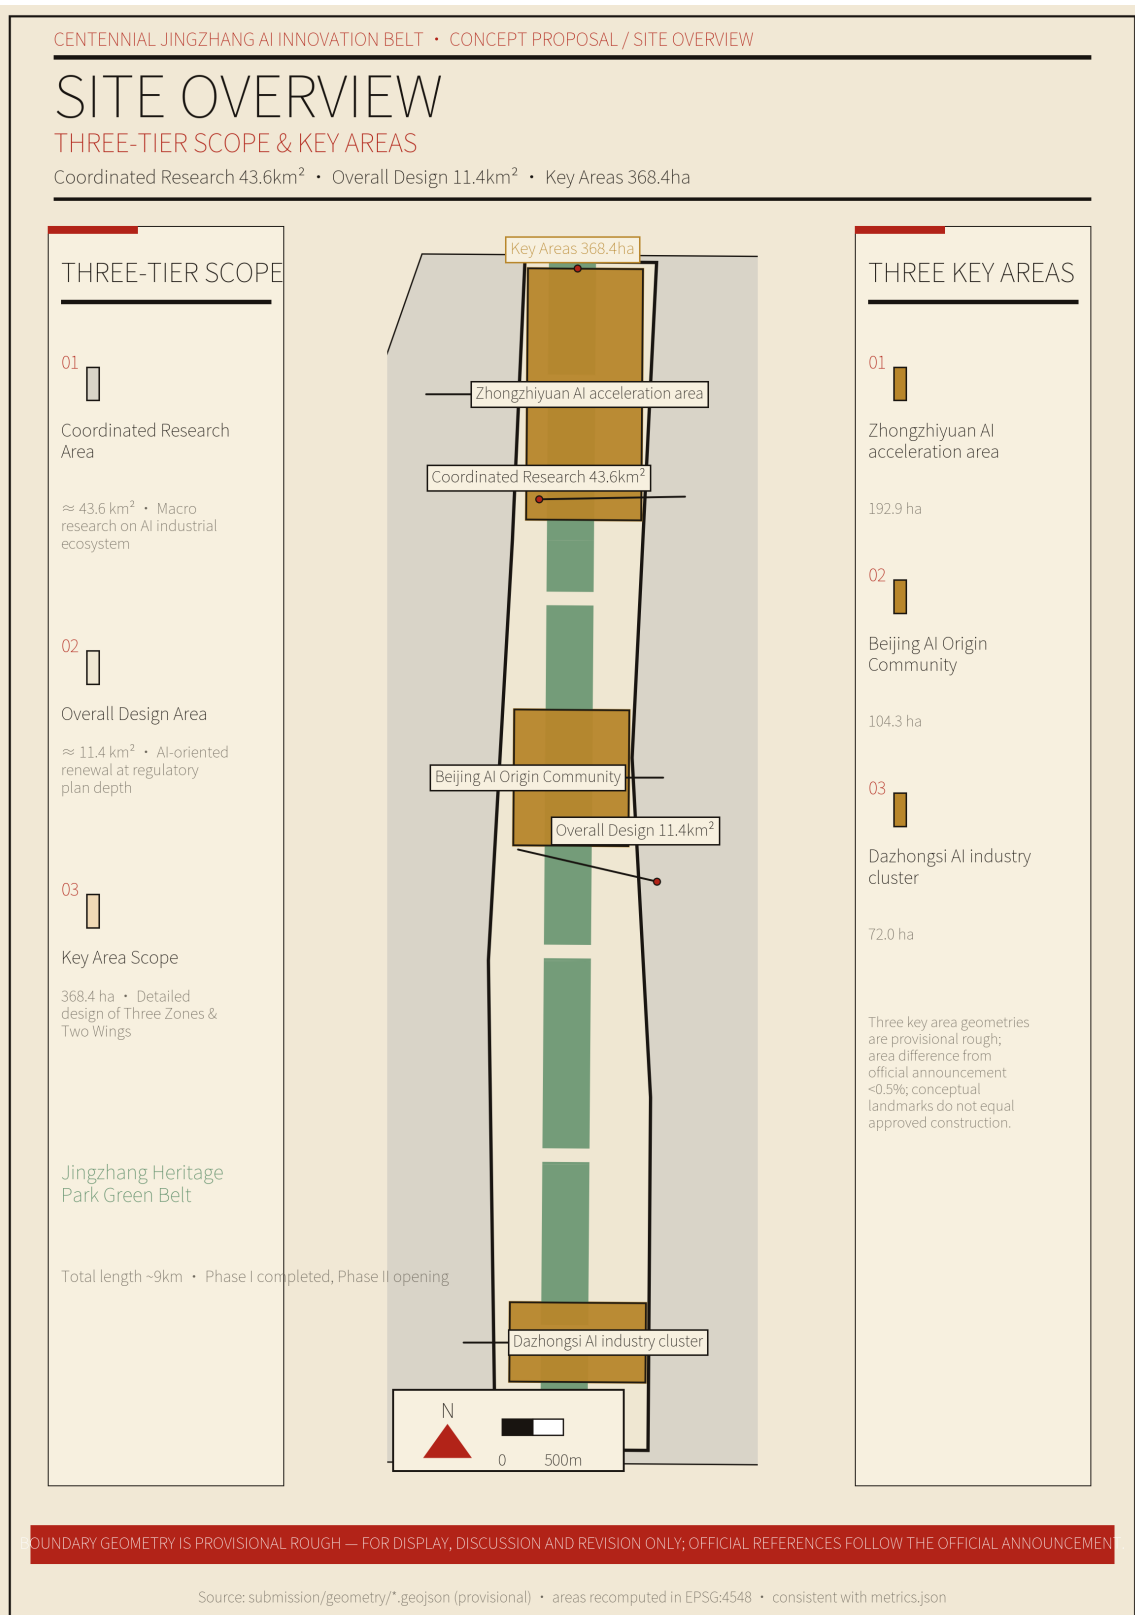

Grounded in the 1909 Jingzhang Railway “Ren” switchback, the Belt is designed as a national innovation spine “for people” — strategy-led with livelihood support; every physical move builds on the 9 km Jingzhang heritage park through stock regeneration.

Concept & Three-Tier Scope

Three tiers • Three depths • Three levels of responsibility

- The coordinated-research tier sets direction, the overall-design tier sets structure, the key-area tier sets scenarios; each tier promises only what it can decide.
- The three tiers unfold north-to-south along the 9 km heritage-park spine
- Official boundaries and control conditions pending; provisional geometry used for generation and display
- All area-sensitive metrics recomputed in EPSG:4548 once official polygons arrive

Site Overview: Three-tier Scope & Key Areas

43.6 km²

Coordinated research

11.4 km²

Overall design

368.4 ha

Key areas

Overall Design: Land-Use Structure & Regeneration

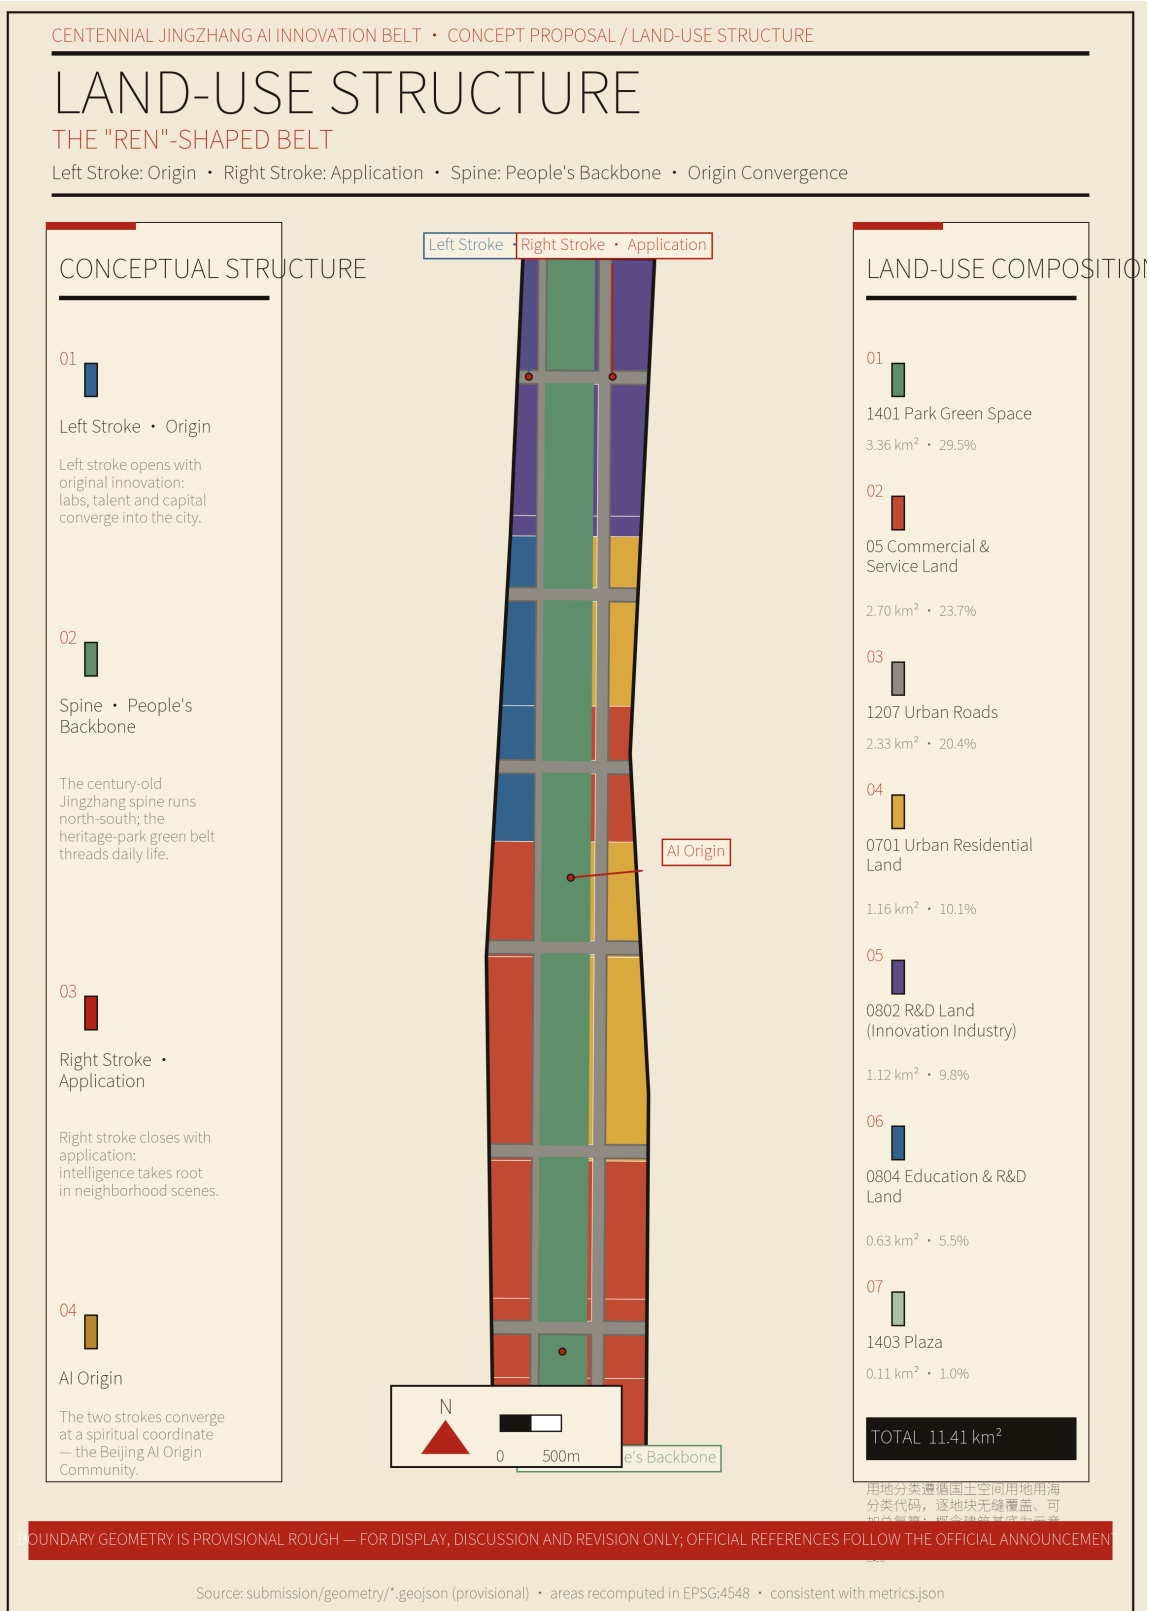

The “Ren” is set into the land-use skeleton

Left stroke originates, securing university research space; right stroke applies, arranging industrial and commercial land; vertical spine as the public backbone arranges green and public space; the convergence point is composite land.

Land-use classes follow the Guide for Land and Sea Use Classification (territorial codes)

Expressed via guiding indicators (baseline intensity/height/dominant function), not statutory conclusions

Retain–renovate–demolish prioritizes preservation, reuse, upgrading; demolition is the last option

Land-Use Structure: The “Ren” -Shaped Belt

43.6 km²

Coordinated research

11.4 km²

Overall design

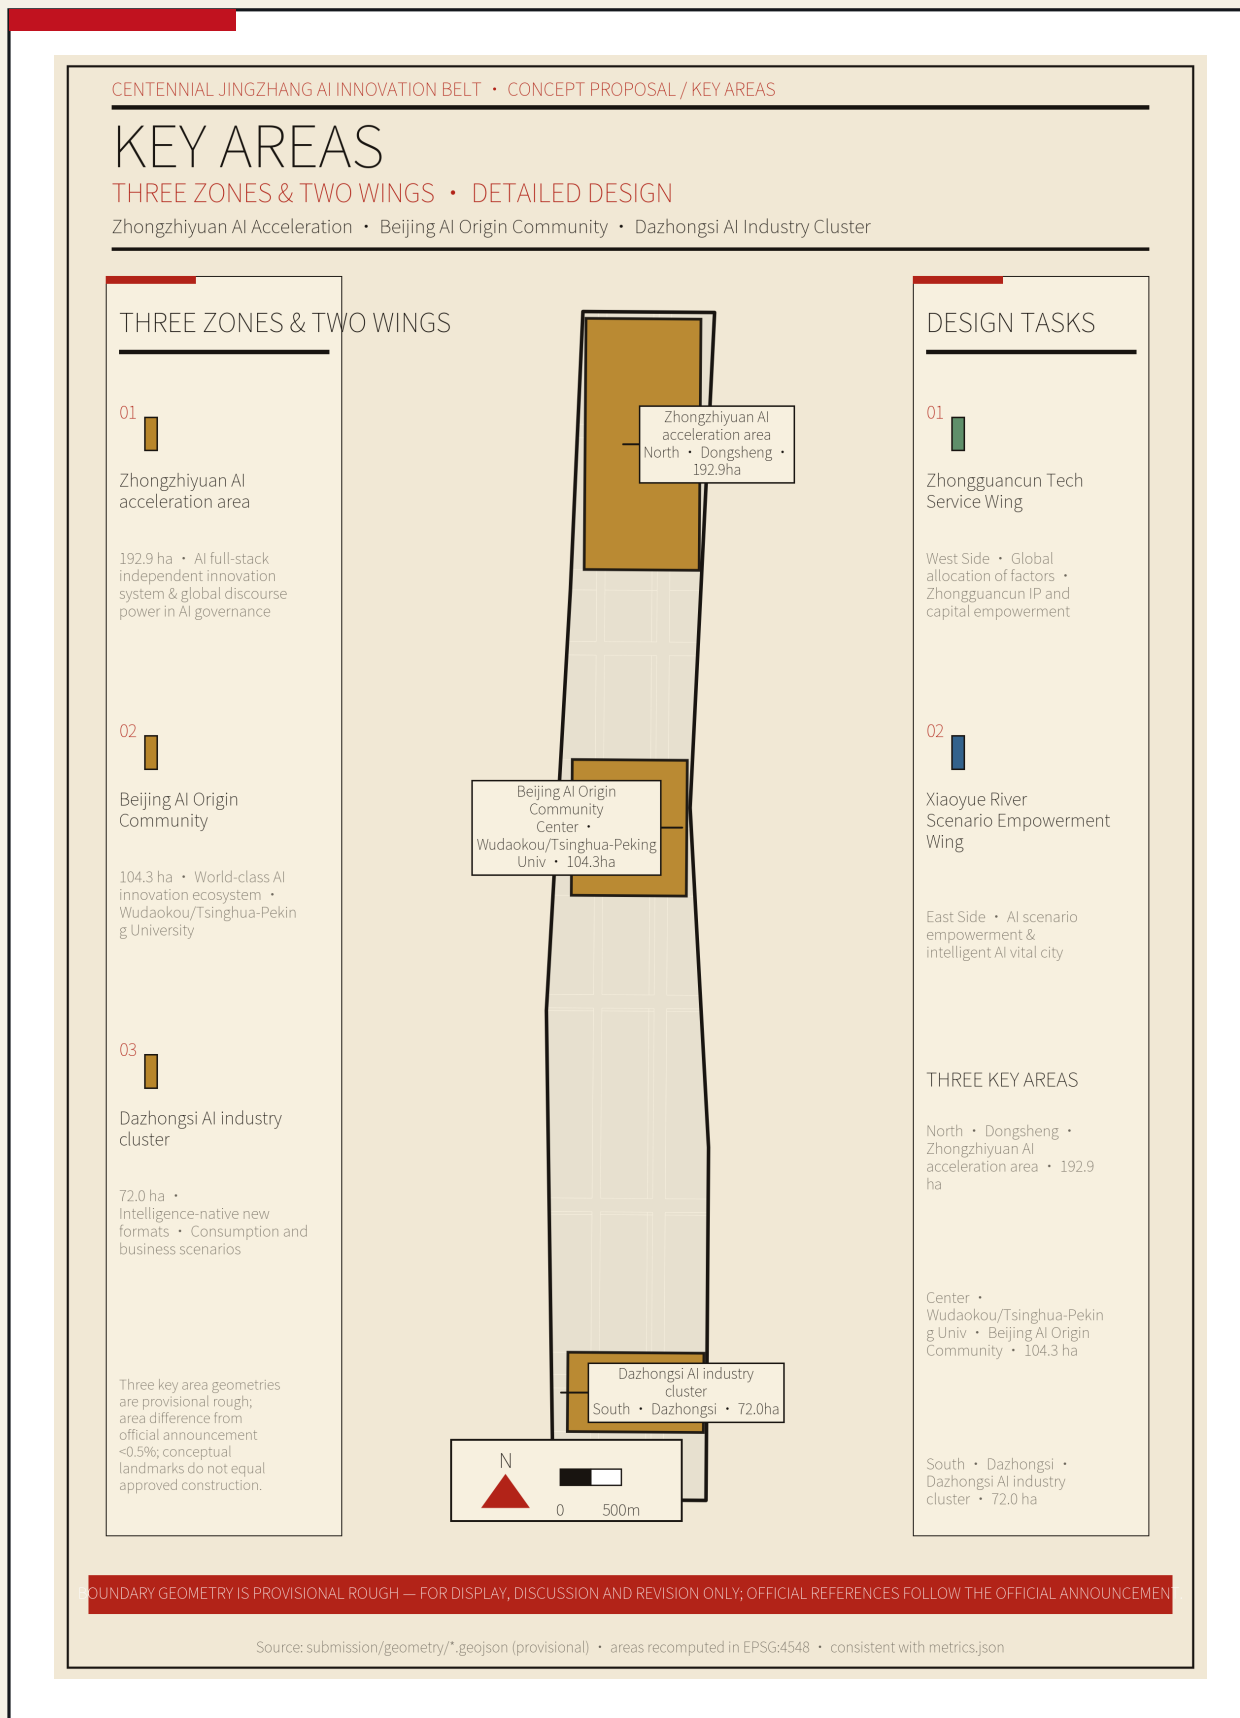

368.4 ha

Key areas

Key Areas: Three Zones & Two Wings

Three key areas, three landing points, jointly drawing one “Ren”

- Zhongzhiyuan — AI full-stack innovation system & global AI-governance voice (N • 192.1 ha)
- Beijing AI Origin Community — world-class AI ecosystem • near-campus circle around Tsinghua/PKU/CAS (C • 104.3 ha)
- Dazhongsi — AI-native new business forms (S • 72.0 ha)
- Zhongguancun Tech-service Wing (W) • Xiaoyue River Scenario Wing (E) — factor allocation & scenario enablement

Index & design tasks of the three key areas

43.6 km²

Coordinated research

11.4 km²

Overall design

368.4 ha

Key areas

Blue-Green Space • Slow Traffic • AI Scenarios

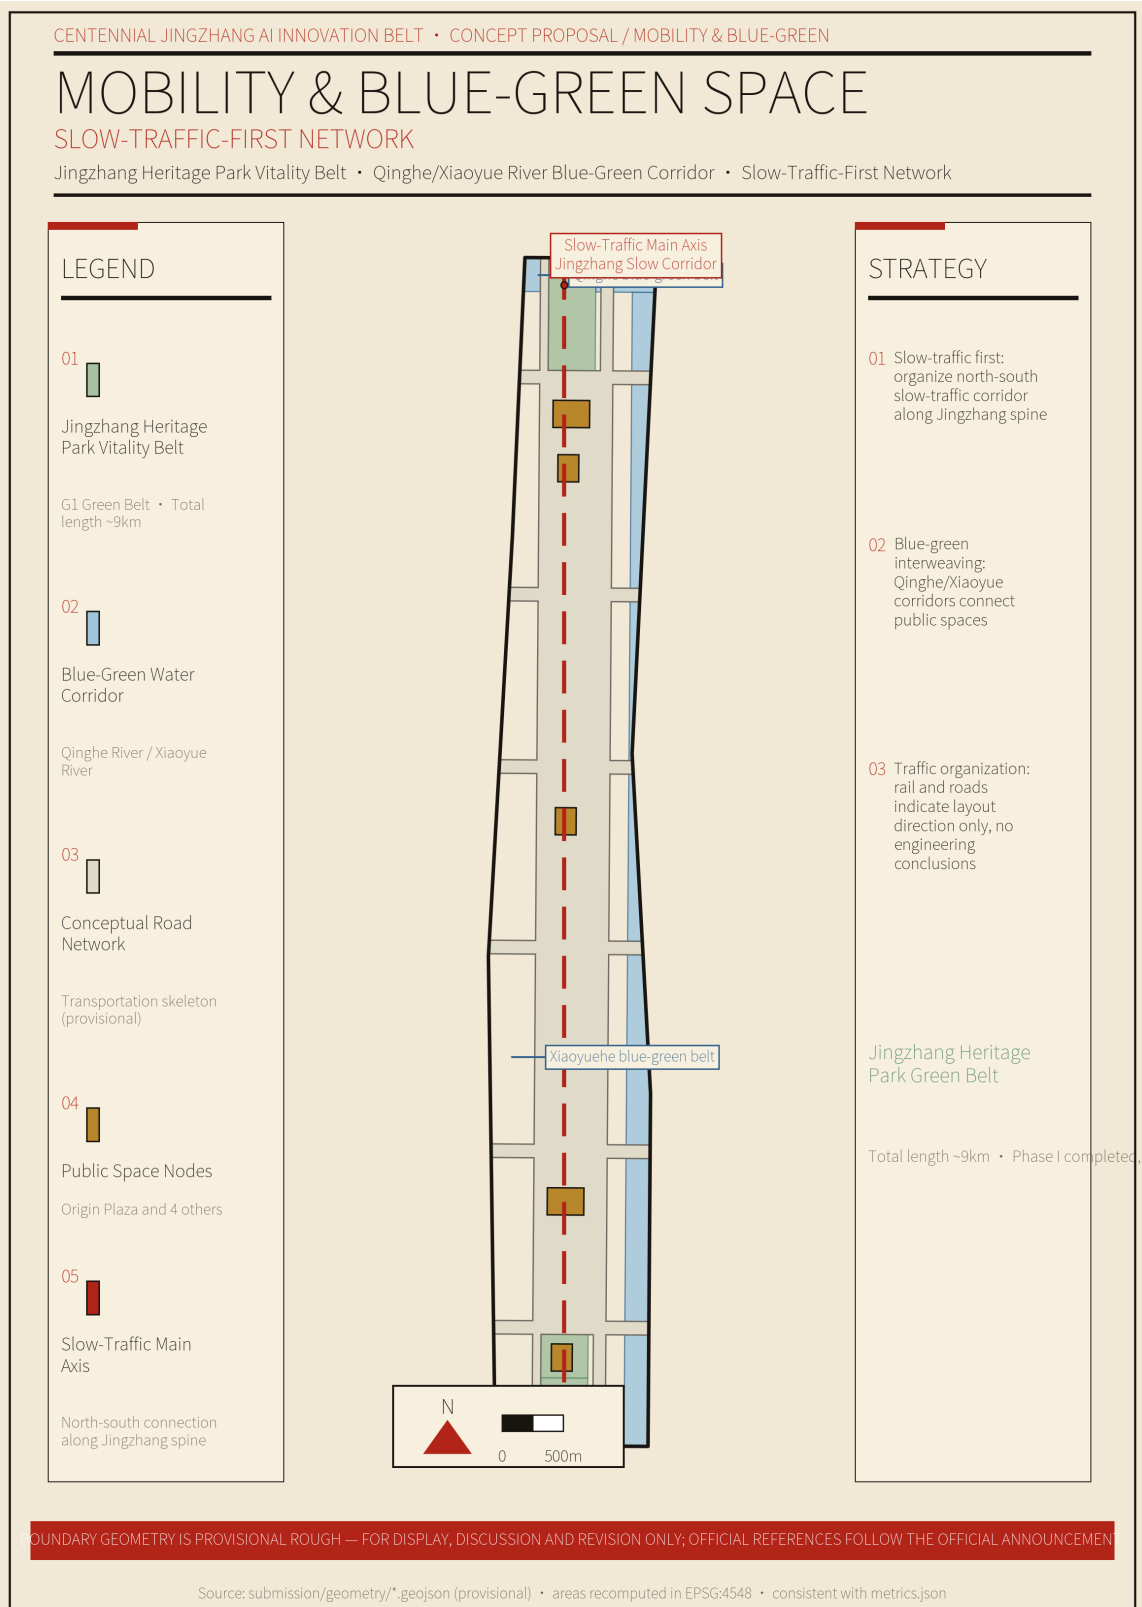

The vertical spine is the backbone of the “Ren” and the stock basis of every physical move

The 9 km heritage park is shaped as a vitality belt and public backbone, linking ~70 communities, serving ~450,000 residents

Qinghe/Xiaoyue blue-green corridors link public spaces; east–west stitching, north–south connectivity

≥10 AI+ scenarios, each passing the six-question technical-fitness test; tests not written as approved operations

Pilgrimage landmarks as spiritual anchors: Ren Origin Plaza • Jingzhang Ren Trail • ZGC Honor Gallery

Mobility, Slow-Traffic & Blue-Green Composite System

43.6 km²

Coordinated research

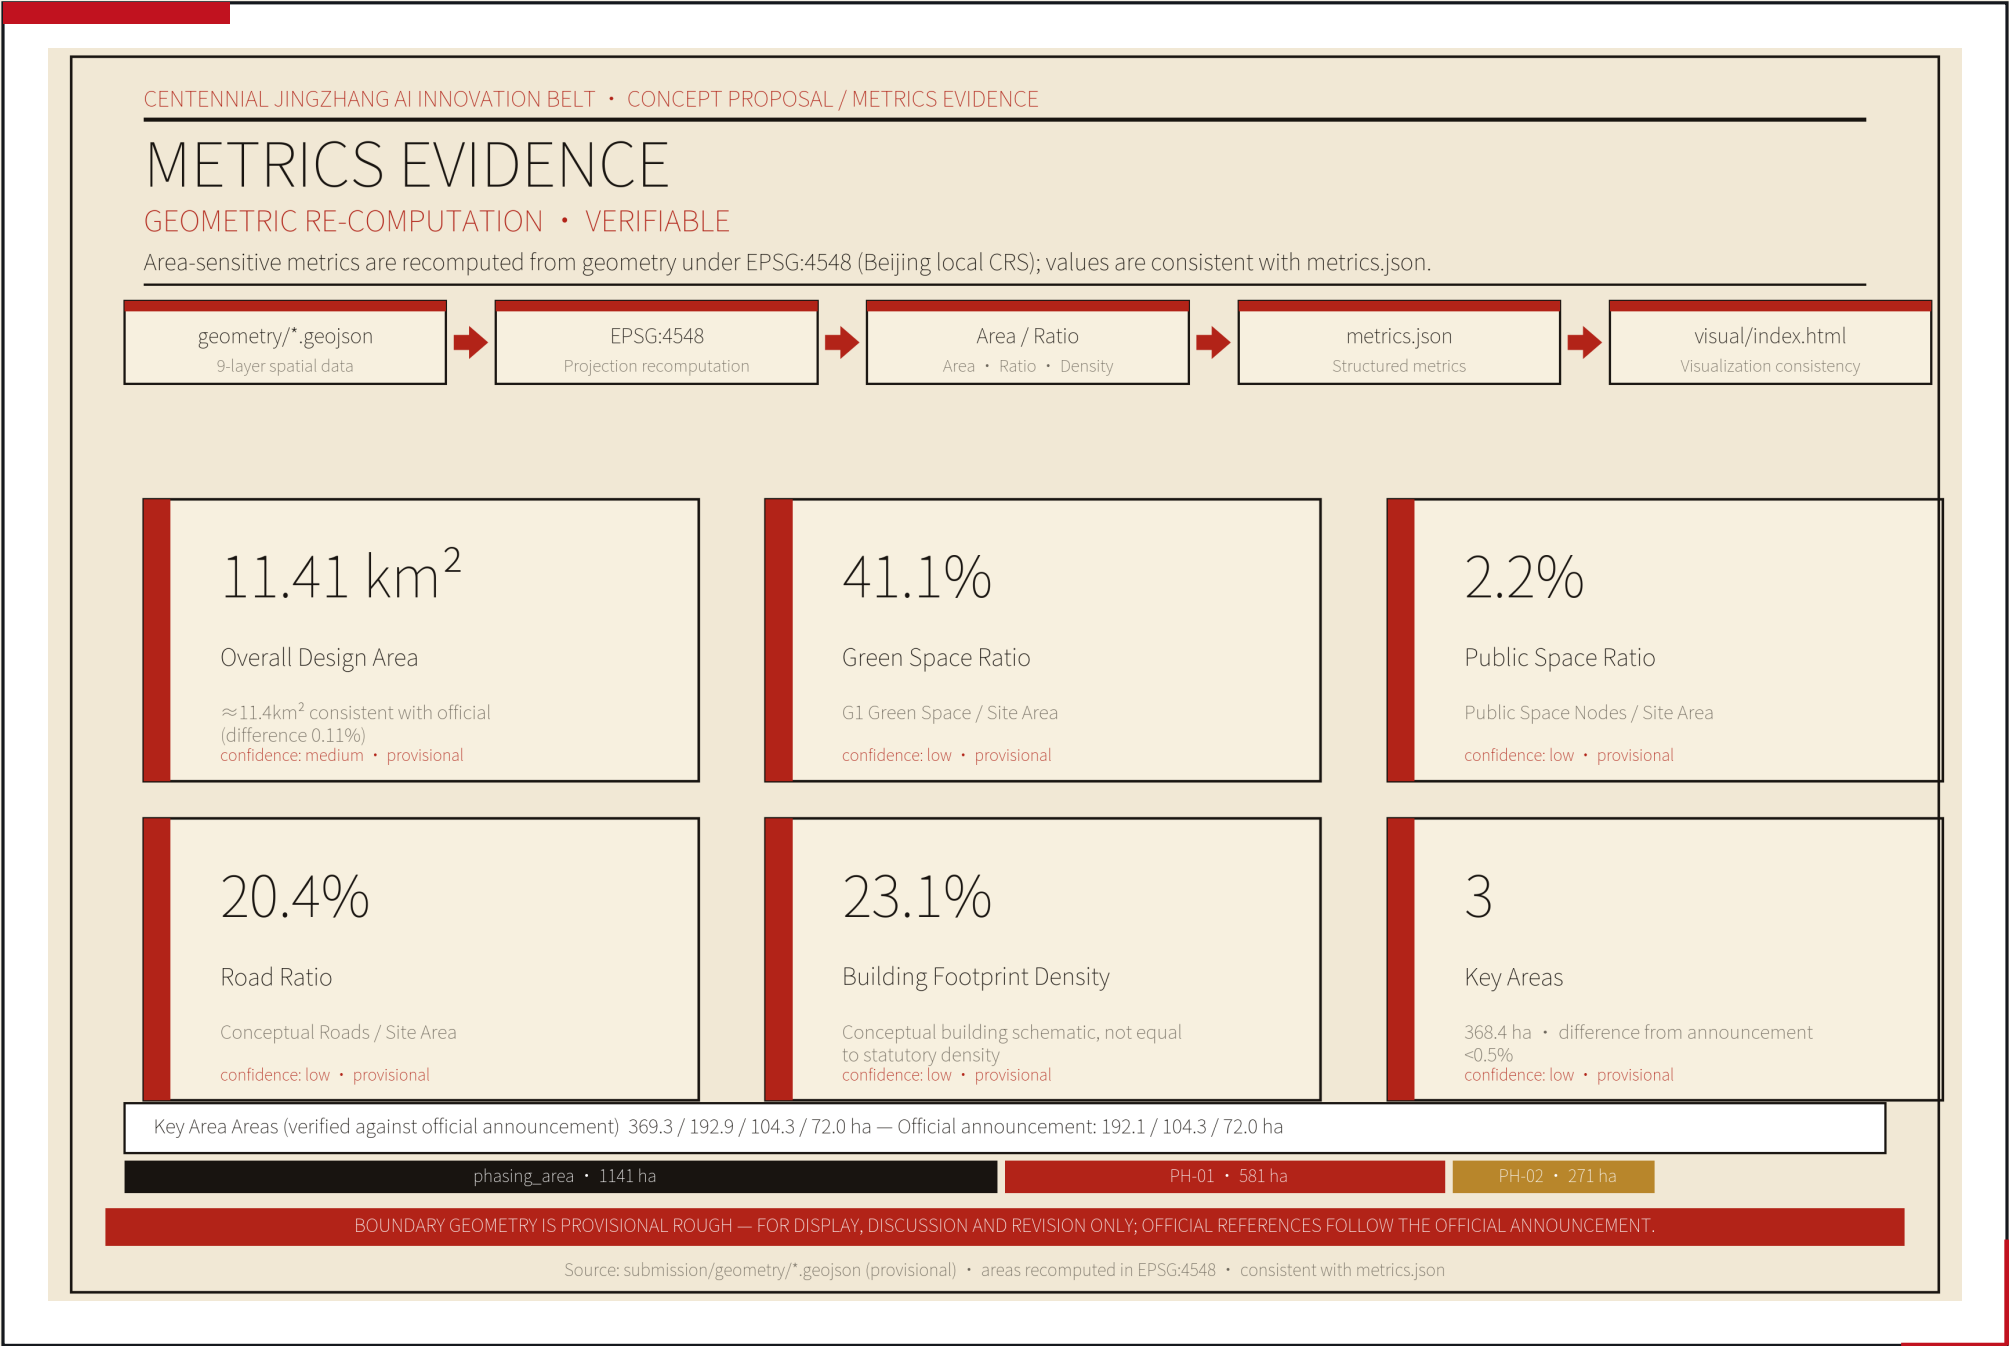

11.4 km²

Overall design

368.4 ha

Key areas

Indicators & Evidence Chain

The renewal project list is expressed by concept project + renewal unit + statutory-document direction.

- Long-term operation as “long-term operation of a national strategic asset” ; mechanism precedes facilities
- Four mechanisms: annual events • developer community • scenario opening • global dissemination & attraction
- Rights-cleared: all cited and generated content registered in report/copyright_statement.md
- This proposal is an open co-creation suggestion; it does not substitute for formal planning or constitute government conclusions

The Ren Belt • Designed for People

2026 • Open-source solicitation submission
