

Jing-Zhang Intelligence Chain: An AI Innovation Corridor on the Centennial Railway Heritage

A north-south AI innovation corridor anchored on the Jing-Zhang Railway heritage park, linking three key areas—Zhongzhiyuan, Beijing AI Origin, and Dazhongsi—through a green spine and east-west wings, integrating cultural heritage, talent life, and AI innovation.

[阅读中文版本](#)

Jing-Zhang Intelligence Chain: An AI Innovation Corridor on the Centennial Railway Heritage

Design Basis and Source Inventory

This proposal is grounded in the *Centennial Jing-Zhang AI Innovation Belt Urban Design International Competition Qualification Pre-Announcement* issued by the Beijing Municipal Commission of Planning and Natural Resources, Haidian Branch [Source](#), and the agent-facing taskbook excerpt provided in the repository [Source](#). Professional depth and land-use classification follow the *Urban Design Management Measures* [Standard](#), the *Regulatory Detailed Planning Compilation and Approval Measures* [Standard](#), and the *Land-Sea Use Classification Guide for Territorial Spatial Planning* [Standard](#).

Spatial data use the repository-maintained `provisional_boundaries.geojson` [Spatial data](#), explicitly tagged as a `provisional_constraint`. It cannot substitute for an official redline, road redline, or precise-area basis [Source](#). Upon release of official CAD/GIS/PDF boundaries, all layers, metrics, and drawings must be regenerated.

Complete source records, metric formulas, compliance matrix, standard matrix, and design-depth matrix are in `sources.json`, `metrics.json`, `compliance_matrix.json`, `standard_matrix.json`, and `design_depth_matrix.json`.

Fig 1: Jing-Zhang Intelligence Chain Concept and Spatial Structure

Overall concept and spatial structure

Three-Level Scope Framework

The proposal adopts the three nested scopes required by the announcement [Source](#):

- **Coordinated research area (43.6 km²):** Bounded by the North 5th Ring Road, Jingzang Expressway, Xizhiwai Street, and Wanquanhe Road. This layer frames the AI industrial ecosystem, three-areas-two-wings synergy, future urban form, and cultural narrative [Depth](#).
- **Overall design area (11.4 km²):** A 1–2 km belt around the Jing-Zhang Railway heritage park, bounded by the North 5th Ring Road, Xueyuan/Xitucheng Roads, Xizhiwai Street, and Dazhongsi East Road/Heqing Road. This layer carries regulatory-plan-depth urban renewal, spatial structure, land use, transport, utilities, blue-green systems, and a renewal project list [Spatial data](#).
- **Key detailed-design area (368.4 ha):** Comprises the Zhongzhiyuan AI Autonomous Innovation Acceleration Area, Beijing AI Origin Community, and Dazhongsi AI Industry Cluster, from north to south [Spatial data](#).

All three scopes use provisional polygons; their precision is provisional rough and intended only for AI generation, visualization, and self-check. Areas and ratios are design-model values pending official polygon release [assumption:ASSUMPTION-001].

Fig 2: Land-Use Structure and Functional Zoning

Three-level scope and land-use structure

Coordinated Research Area: Industry and Future-City Research

Overall Concept

"Jing-Zhang Intelligence Chain" transforms the century-old Jing-Zhang Railway industrial heritage into a cultural spine, injects Zhongguancun's innovation DNA, and channels AI new-quality productive forces into a north-south, east-west-stitched AI innovation corridor. The three positionings respond to the taskbook [Source](#):

- **Centennial Jing-Zhang Cultural Belt:** Preserve the linear memory of the railway heritage park and turn it into an innovation-culture landmark.
- **Urban AI Living Experience Belt:** Organize work, study, living, consumption, sports, and social spaces around a one-day talent-life circle.
- **AI Convergent Innovation Belt:** Integrate university-source innovation, enterprise full-stack R&D, scenario testing, and developer-community operations.

Five Functions and Three-Areas-Two-Wings Synergy

The proposal implements the five functions in the taskbook [Source](#):

1. **AI full-stack autonomous innovation system** (Zhongzhiyuan core): basic research, open-source frameworks, compute infrastructure, and governance standards. 2. **World-class AI innovation ecosystem** (Beijing AI Origin core): university technology transfer, talent zone, open-source community, and international cooperation. 3. **AI+ scenario-empowerment paradigm** (Xiaoyuehe scenario-empowerment wing): urban governance, transport, public services, and shared research instruments. 4. **Intelligent AI-vibrant city** (Dazhongsi core): AI-agent consumer services, smart terminals, and content creation. 5. **Global AI governance voice** (Zhongzhiyuan + Zhongguancun technology-service wing): safety evaluation, standards, international conferences, and policy dialogue.

The "three areas and two wings" form a closed loop: the cores provide industrial content and spatial carriers; the east wing supplies capital, IP, and professional services; the west wing hosts scenario testing and public experience [Source](#).

Regional Synergy Matrix

Building on the internal synergy of the three areas and two wings, the proposal establishes conceptual collaboration interfaces with surrounding strategic nodes [Source](#). All entries below are conceptual directions, not agreements or government commitments; specific cooperation

requires separate negotiation among property owners, management agencies, and market entities.

Synergy node	Relative location	Potential collaboration interface	Spatial/industrial carrier	Source status
Beiwei Community	Northwest of coordinated research area	Talent housing, international schools, international living services	Reserved residential and service land north of Zhongzhiyuan	Conceptual; pending official planning confirmation
Future Science City	Approx. 15 km north	Compute hub, large scientific-facility linkage, enterprise headquarters/second headquarters	Jingzang/Jingxin expressway corridor, intercity connection	Conceptual; pending official planning confirmation
Huairou Science City	Approx. 40 km northeast	Basic-to-applied research transfer, shared research instruments, talent exchange	Jing-Zhang high-speed rail, suburban express rail, academic networks	Conceptual; pending official planning confirmation
E-Town (Yizhuang)	Approx. 20 km southeast	Intelligent manufacturing, embodied-intelligence testing, supply-chain support	Beijing-Tianjin intercity, expressway network, industrial enclave	Conceptual; pending official planning confirmation
Beijing-Tianjin-Hebei city cluster	Regional scale	Mutual standard recognition, scenario interoperability, joint branding, talent mobility	Jing-Zhang high-speed rail, Jingzang expressway, Beijing-Tianjin-Hebei coordination mechanism	Conceptual; pending official planning confirmation

Global Case References and Comparison

The proposal draws on six global AI and innovation-ecosystem cases, forming a transferable-experience matrix. Case facts are drawn from public materials or official releases; the table is for conceptual reference only and does not constitute a complete evaluation of those cases.

Case	Location	Core characteristics	Transferable lessons	Source status
Barcelona 22@	Barcelona, Spain	Industrial district turned innovation neighbourhood; mixed office, residential, education, and commerce; industrial heritage preserved	Industrial heritage as spatial identity; small-block dense street network; cultural events activating public space	Public case materials
Toronto Waterfront / Sidewalk Labs (concept)	Toronto, Canada	Data-driven urban experiment; public participation; digital infrastructure pilot	City-scale data-governance sandbox; public-engagement mechanism; modular urban infrastructure	Public case materials
Pittsburgh Robotics Row / Oakland	Pittsburgh, USA	CMU-enterprise-government collaboration; autonomous-driving and robotics test fields	University technology spillover; real-world urban testing; industry-academia-policy linkage	Public case materials
Paris Station F	Paris, France	Entrepreneur community operation; event brand; large-enterprise-startup symbiosis	Shared workspace; community event brand; corporate mentors and accelerators	Public case materials
Shenzhen Nanshan Science Park	Shenzhen, China	Industrial-chain clustering; talent housing; government-market collaboration	Dragon-head + SME ecosystem; talent housing and public services locking in innovation population; rapid iterative policy	Public case materials

Case	Location	Core characteristics	Transferable lessons	Source status
London King's Cross / Google Campus	London, UK	High-density knowledge district around transport node; cultural facilities and public-space network	Railway-heritage district regeneration; pedestrian network; cultural facilities mixed with tech industry	Public case materials

Local application paths in this proposal: the Jing-Zhang Railway heritage park corresponds to "industrial-heritage spatial identity"; the three-core plazas and open-source release hall correspond to "public platforms lowering transaction costs"; Global AI Week and Developer Festival correspond to "annual events sustaining community vitality"; talent apartments and community service centres correspond to "talent housing and public services locking in the innovation population" [Source](#).

Overall Design Area: Urban Renewal and Regulatory-Plan-Level Urban Design

Spatial Structure

The overall design area follows a "one chain, three cores, two wings, six corridors" structure [Spatial data](#).

- **One chain:** The Jing-Zhang Railway heritage park green spine, with a central pedestrian path and AI scenario nodes, flanked by park green space and cultural corridors.
- **Three cores:** The three key areas, from north to south, hosting full-stack autonomy, technology transfer, and intelligent economy.
- **Two wings:** The east Zhongguancun technology-service wing (business, finance, education, professional services) and the west Xiaoyuehe scenario-empowerment wing (research, living, testing scenarios).
- **Six corridors:** Six east-west slow-mobility connectors at the boundaries of the key areas to stitch together the urban fabric divided by the railway.

Land-Use Layout

Land-use coding follows the national territorial-spatial classification standard [Standard](#). Within the 11.4 km² overall design area, the main uses are research (0802), education (0804), commercial and business services (09), residential (0701), park green space (1401), and plaza/public-space land (1403) [Spatial data](#). Proportions and metrics are in [metrics.json](#) and Figure 5.

Renewal Framework

Given the absence of existing-building, ownership, and regulatory-plan data, the proposal defines three conceptual strategies [Depth](#):

- **Retain:** Universities, research institutes, and good-quality educational buildings; focus on functional insertion and public-space upgrading.
- **Renovate:** Industrial heritage, underperforming commercial, and community-service facilities; convert them into AI public services, talent housing, and incubators.
- **Demolish / New-build:** Structures with serious safety or functional mismatches; renew them into mixed-use buildings subject to official regulatory approval.

All retain/renovate/demolish judgments are conceptual suggestions, not statutory planning or engineering implementation conclusions [Source](#).

Detailed Design of Key Areas

Zhongzhiyuan AI Autonomous Innovation Acceleration Area

Positioned as a garden-type autonomous innovation district, hosting the AI full-stack autonomous innovation system and global AI governance voice [Spatial data](#).

- **Spatial strategy:** Zhongzhiyuan Wisdom-Source Plaza anchors the Open-Source Release Hall, AI Safety Governance Corridor, and University-Enterprise Transfer Living Room; research land on the west and education on the east.
- **Building renewal:** Low-to-mid-rise research buildings; retain university buildings and renovate selected underperforming spaces for exhibition and conferences.

- **Public space:** Wisdom-Source Plaza on the central spine and east-west slow-mobility links connecting both sides.
- **Implementation risk:** The provisional polygon has low precision; official boundaries require recalculation of functional layout and areas.

Beijing AI Origin Community

Positioned as a campus-adjacent technology-transfer district, emphasizing university-source innovation, open-source community, and talent services [Spatial data](#).

- **Spatial strategy:** AI Origin Open-Source Plaza is the core, surrounded by education, research, and talent-apartment mixed uses; research-instrument sharing and testing scenarios on the west, education and international cooperation on the east.
- **Building renewal:** Low-disturbance renewal, prioritizing activation around campuses and transit stations.
- **Public space:** Open-Source Plaza as the daily gathering and release node; east-west corridors strengthen station integration.
- **Implementation risk:** University building ownership is complex; any renovation requires consent from property owners and management agencies.

Dazhongsi AI Industry Cluster

Positioned as an urban intelligent-economy district, focusing on AI agents, smart terminals, content consumption, and business services [Spatial data](#).

- **Spatial strategy:** Dazhongsi Agent Plaza is the core; business-finance land on the west and commercial land on the east; the four quadrants around Dazhongsi Station are linked by underground/ground pedestrian systems (conceptual).
- **Building renewal:** Encourage vertical mixed development, with smart-native retail and exhibition at ground level and offices/talent apartments above.
- **Public space:** Agent Plaza for experience and launches; street-level low-carbon compute stations and data-factor theater.
- **Implementation risk:** Dazhongsi Station integration involves rail operations and underground-space ownership; specialized study is required.

Fig 3: Detailed Design Index of the Three Key Areas

AI Innovation Ecosystem, Personas, and AI+ Scenarios

User Personas

The proposal defines five core user types [Source](#):

1. **Young researchers:** need labs, compute, academic exchange, and shared research instruments.
2. **Open-source developers:** need co-working spaces, release platforms, community events, and fast transit.
3. **Industry engineers:** need R&D centers, test fields, supply-chain services, and talent apartments.
4. **Local residents:** need living services, cultural facilities, accessible public spaces, and participation channels.
5. **International visitors:** need AI experience routes, multilingual wayfinding, cultural events, and transit connections.

AI+ Scenario Cards

The proposal provides 13 AI scenario nodes, satisfying the requirement of at least 10 scenario cards and 3 industry test/validation scenarios [Source](#):

ID	Scenario	Location	Users	Privacy & Review
SC-001	Open-Source Release Hall	Zhongzhiyuan Wisdom-Source Plaza	Developers, enterprises, universities	Public events; manual copyright review
SC-002	Urban Agent Sandbox	AI Origin Open-Source Plaza	Research institutes, enterprises	Bounded test domain; human takeover
SC-003	Slow-Mobility Bottleneck Diagnosis	West wing	City managers, citizens	Anonymized data; manual review of retrofit proposals
SC-004	Talent Life Concierge	East wing	Talent, residents	Minimal necessary data; human service fallback
SC-005	AI Safety Governance Corridor	Zhongzhiyuan	Standards bodies, enterprises	Public evaluation; independent third-party review
SC-006	University-Enterprise Transfer Living Room	West wing	Universities, enterprises, investors	Contract-bound; manual matchmaking
SC-007	Data Factor Theater	Dazhongsi	Enterprises, public	Compliant data; anonymized display
SC-008	Low-Carbon Compute Station	Dazhongsi West Plaza	Enterprises, public	Public energy data; manual inspection
SC-009	Jing-Zhang Memory Route	Central spine	Tourists, citizens	Public cultural content; no personal privacy
SC-010	Global AI Week Route	Central spine	Global developers	Public events; manual organization
SC-011	Test scenario — AI traffic signals	East of Zhongzhiyuan	Traffic authorities, enterprises	Bounded intersection; police review

ID	Scenario	Location	Users	Privacy & Review
SC-012	Test scenario — embodied delivery	Dazhongsi	Logistics, property	Bounded time/area; human monitoring
SC-013	Test scenario — shared research instruments	West wing	Universities, institutes	Reservation system; institutional authorization

Each scenario specifies data sources, privacy boundaries, human-review mechanisms, and operating entities, avoiding excessive surveillance or unreviewable automation [Source](#).

Full Scenario-Card Fields (illustrated by SC-002 Urban Agent Sandbox)

Field	Content
Scenario name	Urban Agent Sandbox
Location	AI Origin Open-Source Plaza and surrounding bounded blocks
Users	Urban-governance research institutes, AI enterprises, municipal management agencies
Technology readiness	TRL 5–7 (proof of concept to operational-environment validation)
Data provenance	Municipal open data, anonymized traffic flow, meteorological data
Privacy boundary	No collection of personal identity, faces, or plaintext licence plates; data is anonymized before entering the sandbox
Human-review mechanism	Test plans pass ethics and safety review; real-time operation includes a human takeover button
Operating entity (conceptual)	AI Origin Community operations platform + municipal management agencies
KPIs	Number of test projects, human-takeover rate, issue-closure time, public complaint rate

Field	Content
Failure threshold	Testing is paused if the human-takeover rate exceeds 5% for three consecutive periods or a privacy breach occurs
Exit criteria	After six months of stable operation and evaluation, projects may apply to enter the demonstration segment

The remaining 12 scenarios are registered in `compliance_matrix.json` using the same template fields: scenario name, location, users, data source, privacy boundary, human review, operating entity, KPIs, failure threshold, and exit criteria.

Public-Space Component Library and Pilgrimage Landmark Catalog

- **Public-space component library:** modular seating (wireless charging and info screen), rain gardens, AI interactive installations, multilingual information kiosks, accessible ramps and tactile paving, temporary event display frames, railway-heritage exhibition units.
- **Pilgrimage landmark catalog:** Jing-Zhang Wisdom-Source Tower (annual open-source contributors and AI breakthroughs), Open-Source Release Hall (global model/framework launch landmark), Agent Plaza (embodied intelligence and smart-terminal display), Jing-Zhang Memory Route (railway-heritage cultural pilgrimage route), Data Factor Theater (data-factor circulation showcase window).
- **Honour-display system:** Annual open-source contributor wall, AI safety-governance certification list, Global AI Week permanent exhibition gallery.

Land Use, Building Scale, and Retain-Renovate-Demolish Strategy

Land Areas

`geometry/land_use.geojson` provides a topologically seamless partition of the overall design area. Land-use types and areas are recorded in `metrics.json` and Figure 5. Key metrics include:

- Overall design area: 11.41 km² (recalculated from submitted boundary)
- Green ratio: approx. 16.16% [Metric](#)
- Public-space ratio: approx. 5.69% [Metric](#)

Building Scale

Because official regulatory controls are missing, floor-area ratio, building density, and building height are marked **unknown** in this package [Metric](#). Conceptual building footprints express spatial intention only, not real building layouts. The renewal strategy prioritizes retention, renovation, and limited new construction; specific conclusions require existing-building, ownership, and regulatory data [assumption:ASSUMPTION-002].

Transport, Rail, Municipal Infrastructure, and Public Services

Transport Strategy

The proposal follows a "transit-led, slow-mobility-first, east-west stitched" strategy [Spatial data](#):

- **Station integration:** Strengthen integration of Dazhongsi, Qinghua East Road West, and Wudao Stations with surrounding land, including vertical circulation and conceptual underground connectors.
- **Road microcirculation:** Retain existing arterial redlines (pending official data), densify local roads, and reduce through traffic in key areas.
- **Slow-mobility network:** A central spine pedestrian path and six east-west slow-mobility connectors form a "well-shaped" skeleton ensuring continuous access across the railway.
- **Parking and non-motorized transport:** Public bike/e-bike transfer points in key areas; parking integrated with underground space.

Municipal and Public Services

The proposal integrates distributed energy, edge-compute stations, and sponge-city facilities, but specific utility lines, drainage, power, gas, and fire-access data are missing; current content

is conceptual [assumption:ASSUMPTION-003]. Public services include talent apartments, community centers, educational facilities, and cultural/sports facilities distributed according to land-use zones and estimated population needs.

Fig 4: Blue-Green Public Space and Slow-Mobility System

Mobility, blue-green and public-space composite system

Blue-Green Network, Public Space, and Urban Character

Blue-Green System

The Jing-Zhang Railway heritage park is the core blue-green spine. The design transforms it from a linear barrier into a continuous park corridor and public-space sequence [Spatial data](#):

- **Central pedestrian path:** A 50 m conceptual pedestrian path running north-south, hosting AI events, cultural display, and slow mobility.
- **Park green space:** Parkland on both sides retains industrial-heritage elements and adds rain gardens and sponge-city facilities.
- **East-west green connectors:** Six slow-mobility links also serve as ecological corridors penetrating greenery into both sides.

Public Space

Public space comprises the central pedestrian path, three key-area plazas, east-west wing community living rooms, and six east-west connectors [Spatial data](#). Total public space is approximately 64.93 ha, about 5.69% of the site. These spaces support innovation exchange, AI scenario testing, cultural display, and daily citizen life.

AI Pilgrimage Landmarks

The proposal proposes three AI pilgrimage / honor-display nodes [Source](#):

1. **Jing-Zhang Wisdom-Source Tower** at Zhongzhiyuan Wisdom-Source Plaza, displaying major AI breakthroughs, open-source contributors, and annual honorees. 2. **Open-Source Release Hall** at AI Origin Open-Source Plaza, an iconic space for global developers to release new models and frameworks. 3. **Agent Plaza** at Dazhongsi, displaying embodied intelligence, smart terminals, and urban agent applications.

These landmarks are conceptual designs that do not imply alteration of existing buildings; deepening requires ownership and management consent.

Urban Character

Character guidance follows the *Urban Design Management Measures* on building height, massing, style, and color [Standard](#):

- **Overall tone:** technological, humanistic, low-carbon, open.
- **Area differentiation:** Zhongzhiyuan emphasizes low-to-mid-rise garden research buildings; AI Origin emphasizes campus-adjacent mixed blocks; Dazhongsi emphasizes urban vertical mixed development.
- **Cultural heritage:** Railway remnants, bridges, and platforms are preserved through landscape and signage interpretation.

Renewal Projects, Implementation Policy, and Phasing

Phasing Strategy

`geometry/phasing.geojson` divides renewal into three phases:

- **Near term (PH-001):** Jing-Zhang Intelligence Chain green spine and three-core catalyst areas, including the central pedestrian path, three plazas, first batch of AI scenario nodes, and basic infrastructure.
- **Mid term (PH-002):** East-west wing industry and living-support renewal, including incremental transformation of research, education, commercial, and residential mixed uses.
- **Long term (PH-003):** North-south gateways and regional synergy, including functional linkage with the wider urban system and brand export.

Implementation Policy Directions

Policy directions include innovative mixed land use, existing-building functional conversion, talent housing set-asides, AI scenario open-test sandboxes, compliant data-factor circulation, and green low-carbon incentives. These are conceptual directions, not government commitments or approved arrangements [Source](#).

Long-Term Operations and Brand Assets

Annual Operations Calendar (conceptual framework)

Month	Flagship activity	Operational objective	Spatial carrier	Responsible entity (conceptual)
Jan–Feb	Annual open-source contributor awards; AI safety-governance white-paper workshop	Community consolidation and standards voice	Open-Source Release Hall, AI Safety Governance Corridor	Developer community, standards bodies
Mar–Apr	Scenario Open Days (traffic signals, shared research instruments)	Enterprise–city matchmaking	East of Zhongzhiyuan, west-wing test fields	Enterprises, traffic authorities, universities

Month	Flagship activity	Operational objective	Spatial carrier	Responsible entity (conceptual)
May	Global AI Week, Developer Festival	Brand peak and international communication	Central spine, three-core plazas	Operations platform, international organizations
Jun–Jul	Embodied-delivery open testing; summer intern camp	Technology validation and talent pipeline	Dazhongsi, AI Origin Community	Enterprises, universities, property managers
Aug–Sep	Urban-agent sandbox roadshows and competitions	Innovation project incubation	AI Origin Open-Source Plaza	Incubators, investors
Oct–Nov	Jing-Zhang Memory Culture Festival, International AI Governance Forum	Cultural narrative and policy dialogue	Central spine, Zhongzhiyuan	Cultural institutions, think tanks
Dec	Annual results release; next-cycle budget and KPI review	Performance evaluation and continuous improvement	Open-Source Release Hall	Operations alliance

Brand Assets and Visual Identity (conceptual direction)

- **Naming system:** Chinese "京张智链" (Jing-Zhang Intelligence Chain), English "Jing-Zhang Intelligence Chain", abbreviation "JZIC".
- **Logo direction:** The Jing-Zhang Railway "人"-shaped switchback is abstracted into a neural synapse; railway-sleeper lines become data streams, forming a symbol of "centennial track × AI neural network". Primary colours: deep blue (technology), rust red (industrial heritage), light green (ecology).
- **Signage family:** Wayfinding uses sleeper-module units scalable to plaza signs, street furniture, digital interfaces, and event graphics; multilingual information boards in Chinese, English, Braille, and QR code.

- **Railway-heritage cultural grammar:** Tracks, points, signals, platforms, and other industrial elements are preserved and displayed through landscape, signage, and artistic interpretation.
- **Application examples:** Event key visuals, plaza floor engravings, talent cards, open-source contributor honour wall, AI scenario-node wayfinding signs.
- **Accessible typography rules:** Chinese body text in sans-serif Heiti, minimum 14 pt; English in sans-serif; key information provided as both icon and text; high-contrast colour schemes.

Developer Community and Governance Mechanism (conceptual model)

- **Developer-community operation:** Open-Source Release Hall as the offline hub, AI Origin Community providing talent apartments and co-working space, and an online platform hosting code repositories, model releases, and discussion forums.
- **Scenario-access process:** Enterprise/research institute submits test application → Sandbox management committee conducts safety and privacy review → Test within bounded time/space domain → De-identified evaluation report → Outstanding results may enter the demonstration segment.
- **Talent/enterprise conversion pathway:** Young researcher → open-source contributor → startup team → incubator/enterprise R&D centre → participation in Global AI Week → talent apartment and policy support.
- **Funding assumptions (conceptual):** Near term relies mainly on government-guided funds and university research budgets; mid term introduces industrial funds and social capital; long term achieves partial self-sustainability through scenario operations, brand licensing, and professional services.
- **Long-term KPIs (conceptual):** Annual open-source contributors, AI scenario-test projects, international conferences and events, talent-apartment occupancy, green-travel share, public-satisfaction surveys.

International Communication Funnel

- **Core narrative:** "Centennial railway + AI future" — from Zhan Tianyou's "人"-shaped switchback to today's AI neural network.
- **Channels:** Global AI Week, international open-source conferences, overseas social media, bilingual website and visual index.

- **Experience products:** Jing-Zhang AI experience route, developer pilgrimage tour, international student research camp.

Metrics, Area Recalculation, and Compliance Matrix

Core Metrics

All known metrics in `metrics.json` are recalculated from submitted geometry. Key metrics include [Metric Metric Metric](#):

- Overall design area: 11,412,825 m²
- Green ratio: 16.16%
- Public-space ratio: 5.69%
- AI scenario nodes: 13
- Industry test/validation scenarios: 3

Metrics depending on official regulatory controls, such as FAR, building density, and building height, remain `unknown` with reasons [Metric](#).

Compliance and Depth Matrices

`compliance_matrix.json` covers all announcement items 1.3, 1.4, 1.5 and agent tasks 1–6; `standard_matrix.json` covers the announcement, taskbook, Urban Design Management Measures, Regulatory Detailed Planning Measures, and Land-Sea Use Classification Guide; `design_depth_matrix.json` marks items such as existing-conditions diagnosis, three-level scope, overall structure, land-use layout, key-area detailed design, transport/blue-green, building renewal, metric recalculation, and risk/compliance as `complete`, noting limitations imposed by provisional boundaries and missing regulatory data [Depth](#).

Fig 5: Core Metrics Recalculation and Evidence Chain

Core metrics recalculation and evidence chain

Risk, Copyright, and Compliance

Data and Planning Risks

Official precise boundaries, regulatory controls, existing buildings, ownership, municipal utilities, and heritage control lines are missing. All spatial conclusions are provisional design-model values [assumption:ASSUMPTION-001][assumption:ASSUMPTION-002] [assumption:ASSUMPTION-003]. This proposal does not constitute statutory planning, approval, engineering feasibility, or government implementation commitment [Source](#).

Copyright and Compliance

- All diagrams, HTML, GeoJSON, and text are generated by Kimi Code from public/cleared materials under human direction, without unauthorized fonts, trademarks, portraits, or corporate logos.
- Chinese characters use STHeiti, a macOS system font, under system license terms.
- Provisional boundary sources and official announcements are recorded in `sources.json` and `report/copyright_statement.md`.
- AI-generated content does not infringe personal privacy; scenario designs include human-review and privacy-boundary provisions.

The full copyright statement is in `report/copyright_statement.md`.
