

JING-ZHANG, WITH CREDITS

Make the district as citable as a good paper

The proposal adds no new 'smart axis'. Instead, models, data, cultural content, materials, labour and public decisions become traceable, challengeable, revisable and transferable. MAIN TEXT + MARGINALIA creates a continuous public reading ground, 15 citable paragraphs, eight transverse notes and twelve public footnotes.

SIX-FIELD SOURCE NOTE

01 Source What is it based on?	02 Rights Who may permit which use?
03 Contributors Who made and checked it?	04 Transformation What changed, and by whom?
05 Custody Who stores, repairs and withdraws?	06 Review When does it pause or expire?

A district that can be cited

The Main Text is not an axis; Marginalia is not decoration. Every spatial decision returns to source, rights, contribution, transformation, custody and review.

- 15citable blocks
- 8marginalia links
- 12public footnotes

Boundary, key areas, routes, buildings and facilities are provisional concepts; regenerate the entire package when official polygons arrive.

01 Source What is it based on?	02 Rights Who may permit what use?	03 Contributors Who made and checked it?	04 Transformation What did people and AI change?	05 Custody Who stores, repairs and withdraws?	06 Review When does it pause or expire?
---	---	---	---	--	--

Data boundaries precede design claims

Every spatial output is constrained by provisional geometry.

SITE and the three KEY AREAS are not official redlines, parcels, ownership, heritage, statutory planning or engineering boundaries. Official polygons trigger coordinated recalculation of land use, buildings, roads, green/public space, phasing, metrics, figures, PDFs and HTML. FAR, height, road redlines, utility capacity, rights inventory and operators remain unknown.

SIX-FIELD SOURCE NOTE

01 Source What is it based on?	02 Rights Who may permit which use?

PROVISIONAL BOUNDARY · CONCEPT DESIGN

Numbers come from geometry; unknowns stay unknown

KNOWN / RECOMPUTABLE

site area 11,412,825 m² site_area_sqm	green ratio 11.925 % green_ratio	public-space ratio 3.914 % public_space_ratio
citable blocks 15 citable_block_count	scenarios 12 scenario_count	industry tests 3 validation_scenario_count

UNKNOWN / NEVER REPLACED BY A FALSE ZERO

site_area_sqm also comes from provisional geometry; numeric precision serves reproducibility, not official accuracy.

Three scales form one citable relationship

Research explains why something enters; the overall plan shows where; key areas name who maintains it.

The 43.6 km² research scope organizes industry, standards and services around six provenance classes. The approximate 11.4 km² design scope translates them into shared-edge land use, mobility, blue-green space and public facilities. Three key areas test usable space. Stable IDs connect geometry, metrics, narrative and display.

MAIN TEXT + MARGINALIA

Main Text carries continuity; Marginalia carries cross-disciplinary challenge; Footnotes provide human help.

This is not an inferred rail, heritage or road alignment. It is a design relationship requiring survey and professional review. Public routes, physical signs, fixed lighting and staffed service must still work without an account, scan or AI.

SIX-FIELD SOURCE NOTE

Fifteen paragraphs share one boundary system

Land use is split from one SITE, not assembled from independently drawn polygons.

MAIN TEXT public green space and seven paragraphs on each side cover the provisional SITE. Every paragraph uses a registered land-use code, stable citation label and primary provenance responsibility. Programs are comparative concepts and create no statutory category, intensity or property right.

SIX-FIELD SOURCE NOTE

01Source What is it based on?	02Rights Who may permit which use?
03Contributors Who made and checked it?	04Transformation What changed, and by whom?
05Custody Who stores, repairs and withdraws?	06Review When does it pause or expire?

02 / PROVENANCE RESPONSIBILITY · SHARED EDGES

PROVISIONAL BOUNDARY · CONCEPT DESIGN

PROVENANCE RESPONSIBILITY ZONES (NON-STATUTORY)

One provisional SITE is topologically divided by MAIN TEXT and shared cutters in EPSG:4548; colour records primary provenance responsibility only.

READING GUARDRAIL: this is not a statutory land-use, parcel, zoning, ownership or development-rights map. Programs, shares and boundaries require recalculation after official polygons and surveys.

PROVENANCE RESPONSIBILITY

- Model provenance
- Data provenance
- Cultural provenance
- Material provenance
- Labour credit
- Decision & custody

SITE DISPLAY INDEX

S/M/N are overlapping display folds of one provisional SITE; not three separate parcels.

15 citable blocks

1 Main Text

100% union coverage

0 target gap & overlap

PROVISIONAL: statutory land use, FAR, height, road redlines and development rights remain unknown.

Transverse links coordinate bodies and evidence

Eight notes: source, rights, bias, material, labour, decision, retention and appeal.

Each coordinates walking, cycling, accessibility, shade, rain, loading, night and emergency needs; seven green excerpts provide rest and rainwater tasks. AI equipment never occupies clear width. A route may move, degrade or be cancelled when safety or ownership cannot be resolved.

Permission, co-creation and learning can be negotiated.

A cleared reading room, quiet consent room, youth source studio, open editing table and licence desk create a low-threshold campus-edge interface. Contribution may be named, anonymous, collective or undisclosed; viewing never implies training permission. Minors receive stronger safeguards, and refusing to contribute never reduces public service.

MARGINALIA: continuous passage requires no account, scan or AI

DAZHONGSI | PUBLIC PREMIERE EXCHANGE

Release, fallback, custody and public return are accountable.

An AI premiere hall, public verification porch, credited market, screen-free equivalent and staffed takedown desk sit together. Every work or product states purpose, AI role, rights, maintenance and complaint route. Unattributed, inaccessible or no-fallback work cannot scale. Four-quadrant mobility and commercial capacity require separate professional review.

MARGINALIA: continuous passage requires no account, scan or AI

Survey first, adapt second, build last

Eighteen footprints are concept carriers, not an existing-building inventory.

Retain information, mature user networks, repairable structure and embodied carbon; prioritize strengthening, energy, accessibility, ground-floor opening and services adaptation. Demolition is discussed only when safety, connection and lifecycle comparison fail. Height, FAR, setbacks, structure, fire, ownership and cost remain unknown.

PROVISIONAL: statutory land use, FAR, height, road redlines and development rights remain unknown.

Twelve AI scenarios, three industry tests

Every scenario has a place, minimum data, human fallback, accountable operator and stop condition.

Registered scenarios cover attributed cultural guidance, an enterprise provenance copilot and public-safety media review. Others address transcoding, withdrawal, mixed-content comprehension, oral-history consent, youth literacy, captions, creator markets, materials and shared credits. AI assists; it never replaces approval, historical judgement, diagnosis, permission or public decision.

Phase by evidence maturity, not geography

P1 distributes lightweight prototypes; P2 links follow land, mobility and heritage review; P3 waits for official planning and engineering conditions.

Nine renewal projects combine footnote nodes, three key-area carriers, shared-edge labels and annual shared credits. A twelve-month calendar opens by clearing stale records and closes with withdrawal, replacement and archive. Every permanent project requires maintenance jobs, service baseline, budget, spares and retirement; all remain design recommendations.

Recalculation, risk and handover

Known values come from final GeoJSON;
unknowns are never replaced by false zeros.

Layers, metrics, matrices, bilingual narrative, five figures, offline HTML and A3/A0 are generated together before finalization. Any later edit requires fresh manifest hashes and full validation. Risks include provenance mistaken for truth, credit becoming surveillance, rights and cultural appropriation, false spatial precision and ownerless maintenance. The six-field note is not legal advice, registration, planning approval or procurement acceptance.
