

THE CITY BEHIND AI

Jing-Zhang Many Hands Line

Make invisible work visible, handover-ready and independently reviewable.

01

CORRIDOR PLAN: ONE LINE, THREE AREAS, TWO WINGS

15 conceptual land cells • 8 handover links • 3 reversible prototypes

BRIEF ALIGNMENT

3 positions | culture / AI life / convergence

3 areas | AI Origin / Zhongzhiyuan / Dazhongsi

2 wings | tech services / Xiaoyuehe scenarios

8 resources | land, space, industry, capital, talent, compute, data, scenarios

Boundaries, buildings and roads are conceptual; replace as one set when official CAD/GIS arrives.

N ↑ conceptual scale 0—1 km

JING-ZHANG MANY HANDS LINE • v0.4.0 • CONCEPT / PROVISIONAL BOUNDARY

02

LAND-USE CELLS + 24-HOUR OPERATING SECTION

Each cell carries use, public-interface, operation and exit fields

24H HANDOVER CHAIN

KEY AREAS: THREE REVERSIBLE PROTOTYPE PASSPORTS

Carrier + ordinary baseline + AI layer + acceptance + stop / restore

DAZHONGSI | HANDOVER PORCH

6×18m canopy / continuous arrival / low desk

Ordinary: seat, water, paper timetable

AI: local no-tracking routing

Accept: path continuous; fault response 30 min

Stop: unauthorized tracking; remove screen, keep service

AI ORIGIN | LEARNING + CARE

9×15m hall / adjacent care / quiet corner

Ordinary: adjustable desk, paper class, human booking

AI: one-session match, no family profile

Accept: access audit; equipment replacement 2h

Stop: access gate fails; restore ordinary learning hall

ZHONGZHIYUAN | REPAIR + ASSURANCE

12×24m bay / emergency stop / tool wall

Ordinary: paper work order, human appeal

AI: telemetry not tied to worker performance

Accept: stop 100%; error correction ≥95%

Stop: serious harm / stop failure; restore workshop

04

ACCESS + BLUE-GREEN NETWORK × 12 SCENARIO NODES

Every digital path has a no-tracking route; every node has human, offline, shade and exit interfaces

NODE SERVICE CHAIN

ARRIVE 01—03

meal / no-track travel / multilingual rights

LEARN 04—06

family time / accessible learning / repair passport

ASSURE 07—09

fair schedule / maintenance / last-mile logistics

LINE 10—12

heat safety / fault handover / labor memory

COMMON ACCEPTANCE

- ✓ walk
- ✓ wheelchair
- ✓ night light
- ✓ shade + water
- ✓ paper fallback
- ✓ human appeal

05

EVIDENCE → 100-DAY DELIVERY → INDEPENDENT REVIEW

Feasibility means owner, receipt, gate, stop and restoration at every step

0—30 SEE BASELINE

map / title gaps |
owner | ordinary
service

no asset-safety owner
or participation
budget → do not build

31—60 NO-DATA PROTOTYPE

1:1 mockup | human
process | access
walk

safety / access hard
gate fails → revise

61—90 CONTROLLED DIGITAL

data list | deletion
proof | stop log

sensitive collection
lacks necessity → no
launch

91—100 PUBLIC DECISION

independent score |
dissent |
continue/pause/exit

missing evidence or
user group → pause by
default

EVIDENCE QUALITY GATE

A OFFICIAL

scale and context

B DERIVED

operating context
with formula

C PLATFORM / OPEN

calibrate issue, not
local representation

D PROXY

triggers fieldwork,
never construction

UNKNOWN: FAR / height / road lines / title / parking / utilities / heritage controls

Field participation and physical-signage audit are not complete; they remain hard pre-implementation gates.

DECISION RULE

Start with ordinary service. Build a no-data mockup. Add minimum-data tools only after accessibility, labor, safety and community gates pass. Missing evidence or a missing priority user group means pause. Boundaries, FAR, height, roads, title, utilities and heritage controls remain provisional or unknown.

AI augments work; it does not erase responsibility or dignity.
