

THE JING-ZHANG GAUGE 京张限界

One belt, one spine, three gates · fit the gauge, join the line

01 Concept

The railway gauge becomes AI's admission protocol: G0 quiet datum, G1 controlled sandbox, G2 open test zones; six gates test every launch; the out-of-gauge depot makes exit a routine. Traints renew: the gauge endures.

G0
零采集 Zero-collection

G1
最小必要 Minimal-necessary

G2
高频抽检 High-frequency

02 Scenarios & people

Twelve scenario cards (four industry tests): no-token-no-entry delivery ground, embodied-AI hall, open-compute pooling desk, endurance loop... no card without a gate. Six personas from seniors and disabled users to startups and street managers.

03 Governance loop

Seven steps on-line: register, self-check, sampling, disclosure, licence, recalibration, demote/exit; reports kept 90 days; third-party appeal route; everything published yearly in the Urban Gauge White Paper.

复测不过即降级 Auto-demote

04 Delivery & ops

Three independently pausable packages (2026-2035); Gauge Day, Opening Festival, Switch-House Workshops and the AI Marathon form the annual calendar; developer credits tie to gate certification; international outreach ships the open-source gauge text.
