

Core idea

- Railway station -> civic AI station.
- The belt becomes a sequence of reviewable urban interfaces.
- Not a single technology park; a public learning and testing system.

Three anchors

- VALIDATE - Zhongzhiyuan
- TRANSLATE - AI Origin Community
- PUBLISH - Dazhongsi

Governance promise

- Every AI scenario has a responsible owner.
- Every automated service retains human takeover.
- Every digital route has an analogue alternative.

Zhongzhiyuan

- Full-stack R&D and testing.
- Safety, standards and governance observatory.
- Blue-green low-carbon innovation interface.

AI Origin Community

- Open-source release and university transfer.
- Public AI learning and community co-review.
- Origin landmark links railway memory and AI culture.

Dazhongsi

- Application market and enterprise services.
- International roadshow and urban publishing.
- Transit-linked public living room.

12 scenarios / 4 tests

- Industry testing stays bounded in time and space.
- Scenario passport records data, fallback, owner, stop rules.
- Failure is retained as public learning, not hidden.

Evidence chain

- proposal.md -> sources / assumptions
- GeoJSON -> metrics -> figures
- compliance / standards / depth matrices
- offline HTML + A3/A0 presentation

Boundary disclosure

- All geometry is provisional until official polygons arrive.
- No official approval, parcel ownership or construction scale is claimed.
