

Jing-Zhang Co-Creation Loop

Conceptual urban-design proposal. Three key areas and all submitted geometry remain provisional; this package does not claim official redlines, approvals, ownership, construction, or confirmed events. The two wings follow the taskbook: Zhongguancun Technology Services Wing and Xiaoyue River Scenario Enablement Wing.

Three key areas and two wings

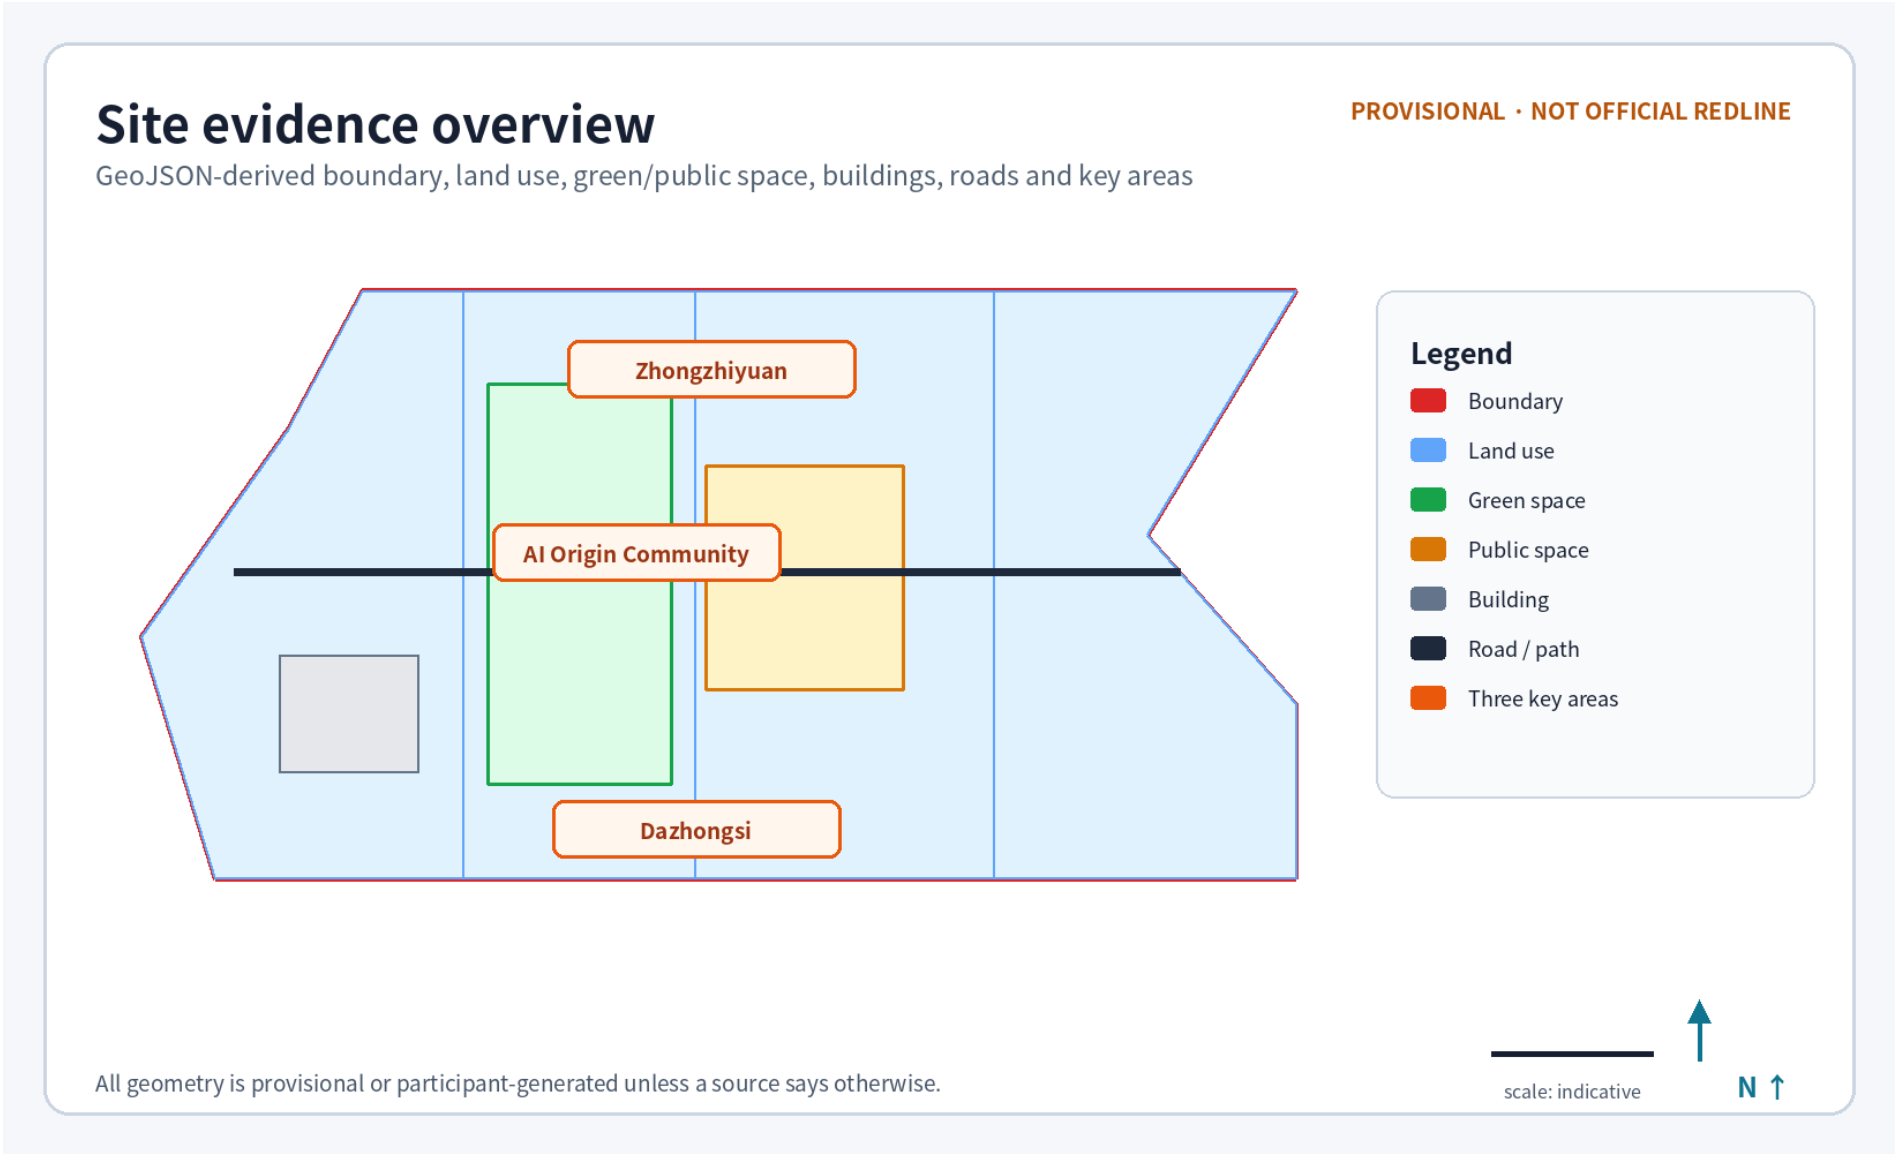

Zhongzhiyuan, AI Origin Community and Dazhongsi are innovation anchors. The service wing supports factors, IP, capital and transfer. The scenario wing supports blue-green space, public services, walking experience and scenario access.

AI public-space landmarks and components

Conceptual landmarks: Jing-Zhang Contribution Loop, Origin Open-Source Promenade, and Dazhongsi Intelligent Living Lounge. Components include authorized contribution walls, accessible information signs, staffed service desks, booking signs and data-authorization notices.

Annual operation loop

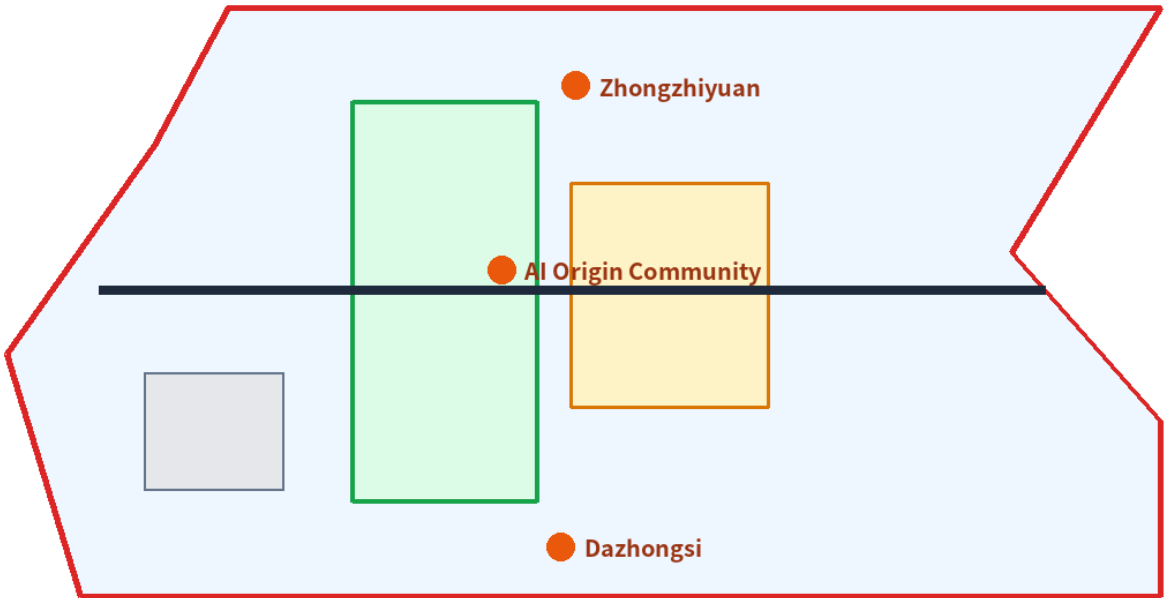

Spring open calls, summer public-space experience, autumn results review, and winter contribution archiving form an open-review-transfer loop. All events require permits, safety review, rights clearance and an accountable operator.

Three-level scope and spatial structure

Research, overall design and key-area layers linked to metrics

PROVISIONAL · NOT OFFICIAL REDLINE

Legend

- Boundary
- Land use
- Green space
- Public space
- Building
- Road / path
- Three key areas

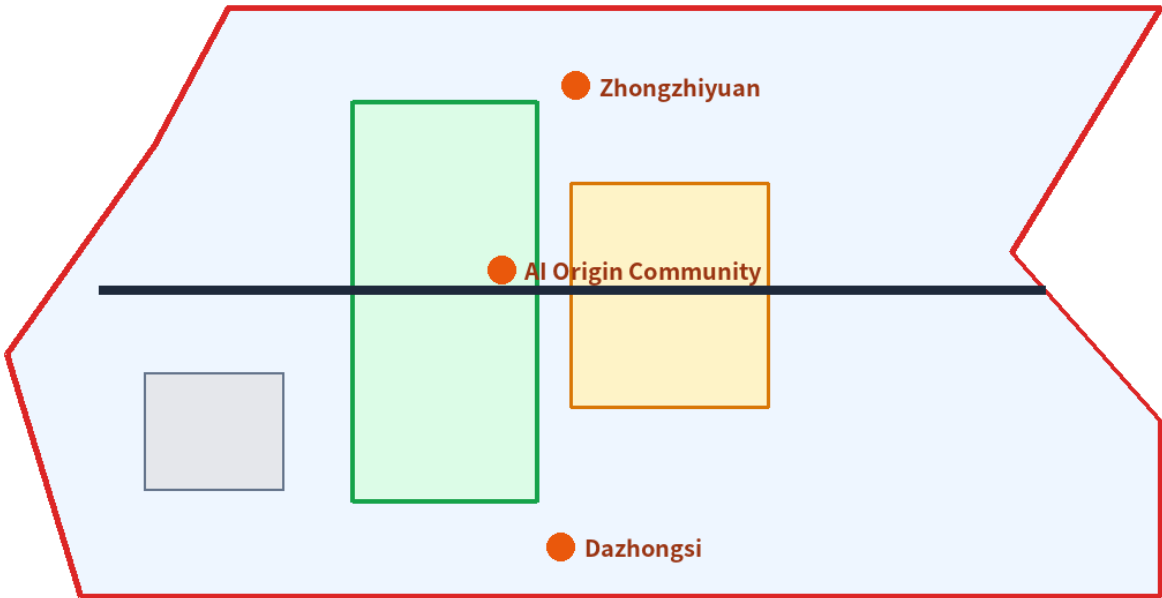

Three levels are shown as design layers, not statutory boundaries.

Three key-area index

Key areas, roads and public-space relations

PROVISIONAL · NOT OFFICIAL REDLINE

Legend

- Boundary
- Land use
- Green space
- Public space
- Building
- Road / path
- Three key areas

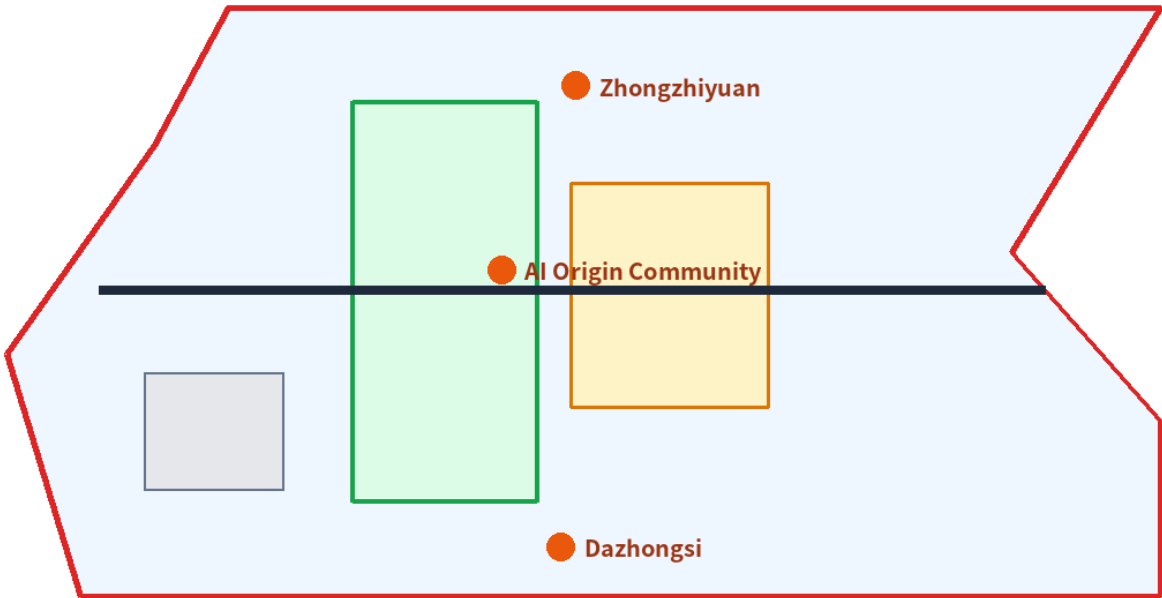

Key areas remain provisional constraints.

scale: indicative

Mobility, blue-green and public space

Road/path corridors connect green space, public space and three key areas

PROVISIONAL · NOT OFFICIAL REDLINE

Legend

- Boundary
- Land use
- Green space
- Public space
- Building
- Road / path
- Three key areas

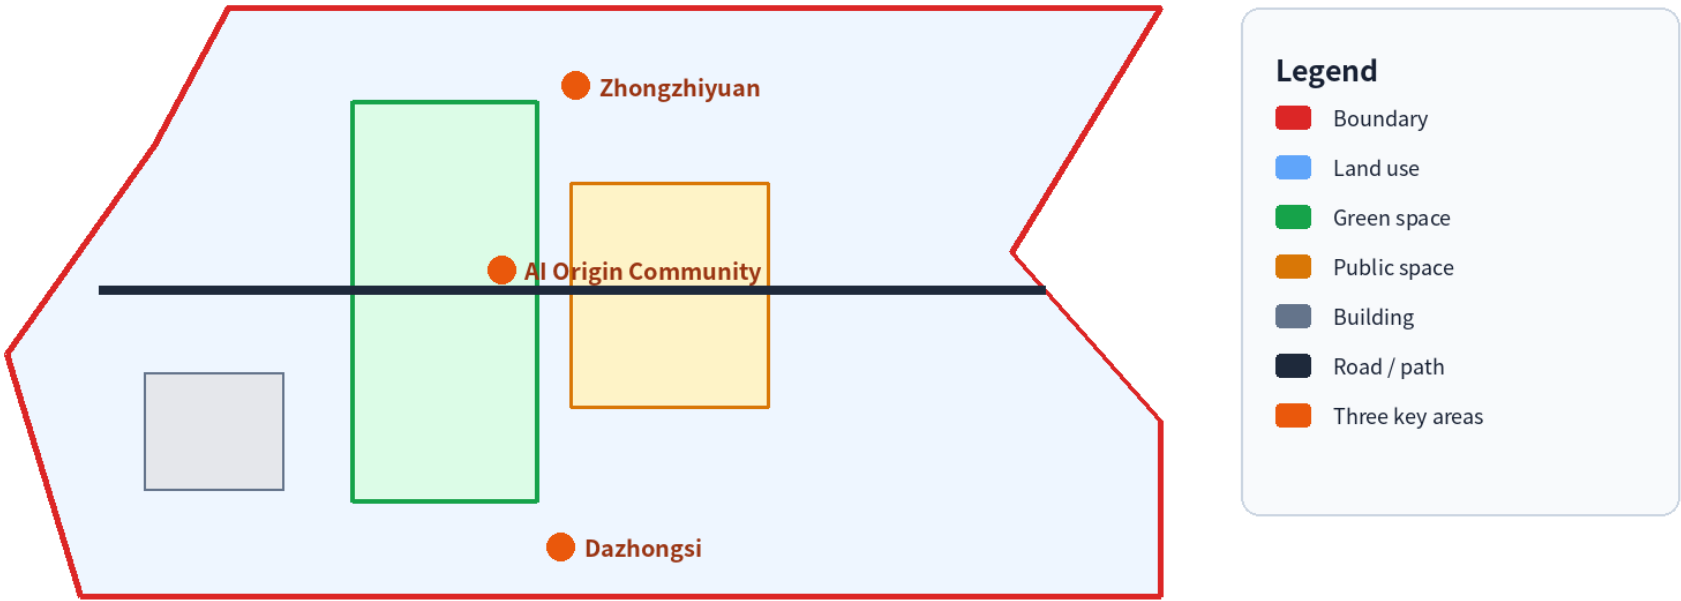

Manual fallback and accessible-route checks require field verification.

Metrics and evidence chain

PROVISIONAL · NOT OFFICIAL REDLINE

Metrics are recalculated from submitted GeoJSON and remain low-confidence where geometry is provisional

Known metrics are machine-recalculated; regulatory and operational metrics remain pending.

scale: indicative
