

Human-AI Co-living Laboratory · Centennial Jing-Zhang AI Belt

JZ-AI Spine

AI as co-dweller, not spectacle.

On the century-old railway heritage, exploring the possibility of gentle coexistence between humans and digital life.

Human-AI Co-living Future

Human-AI Co-living

The Jing-Zhang Railway heritage is no longer solely a human memorial space; it becomes an urban public space where humans and digital life converse bidirectionally and cohabit. People input memory into the site; digital life translates memory into landscape light and shadow. The two nourish each other, jointly generating an ever-evolving new state of the site.

Rejecting "AI as Spectacle"

We do not pursue flashy technology stacking. The ultimate goal of all AI and digital installations is to serve the emotions and memories of ordinary people. Digital life is not an object to be viewed, but a presence that walks with you in the park.

Innovation District Within a Park

43.8% green ratio (including waterfront green belts); nearly 30% of land is public open space. R&D and commercial functions are embedded within the park framework, not the traditional "buildings + green space" campus model. Green first, city second.

Open Source as Public Good

Interactions on public infrastructure are open-sourced to all. Anyone can write an interaction for a bench, leave a ring on the path. Submissions go live after community review, balancing openness and safety.

The Rails Remember Everything

The rails of Jing-Zhang do not speak, yet they remember everyone who walked upon them. We hope AI will remember too—children's laughter, the silence of elders, a sentence someone left one evening.

One Spine, Three Cores, Two Wings

The linear corridor along the Jing-Zhang Railway heritage running north-south is the "spine," linking three core areas; the east and west wings connect Zhongguancun's service ecosystem and Xiaoyuehe's scenario validation respectively.

Three AI Pilgrimage Landmarks

- AI Origin Plaza** (Central Core): AI Hall of Fame, open-source contribution wall, "First Line of Code" sculpture
- Spine Gate** (North Core): AI Governance Declaration Wall, Global Contributors Hall of Fame
- AI Living Showcase** (South Core): AI product launch stage, "AI and Me" interactive installation

Guangcheng Signature · Three Core Creative Nodes

The soul of the proposal—what sets it apart from ordinary industry planning. All three nodes are located in the Central Core, AI Origin Community, forming the most concrete spatial expression of "human-AI co-living."

01

Innovation Annual Ring Path

"Every step, treading upon time."

Laid along the old railway bed, the path surface embeds sensing and light matrices. Century-old Jing-Zhang history, Zhongguancun innovation events, and public memories of visitors are engraved layer by layer as annual ring patterns.

Each new visitor interaction generates a new ring. The rings are never deleted; they accumulate continuously—the site grows as people arrive.

Material: railway sleeper texture | Markers: 1909 → 1949 → 1978 → 1999 → 2026 → ∞

02

Open-Source Bench

"Public infrastructure, created by all."

Not merely resting furniture but open-source interactive carriers. Citizens can develop custom interactions through open APIs; touch and voice leave emotions, short phrases, and stories.

All submitted interactive programs go live after community review confirms safety and no privacy infringement. Openness and public safety balanced.

Material: rust metal + wood | Tech modules embedded | Interactive lights at night

03

AI Symbiosis Garden

"No fixed script. Every moment is one of a kind."

Core immersive node. Physical plants and digital life are interwoven and coexisting. Digital life evolves dynamically with pedestrian flow, seasons, and weather; plant growth in turn influences digital behavior.

No fixed performance script. When a person enters, digital life senses their position and state, approaching or withdrawing—genuine bidirectional interaction.

Tech: ground projection + mist + ambient sound | No large screens | Existing trees + native wildflowers

AI+ Scenario System (15 Scenarios)

#	Scenario	Type	Location	Description
1	AI Open-Source Collaboration Hall	R&D	AI Origin Community	Real-time global developer collaboration visualization, open-source contribution maps, remote holographic collaboration
2	Computing Dispatch Trading Center	R&D	Zhongzhi Park	Real-time computing resource visualization, cross-center dispatch, green computing certification
3	AI Governance Sandbox	R&D	Zhongzhi Park	Regulatory tech test environment, AI algorithm filing and audit, ethics review simulation
4	Autonomous Driving Demonstration Road	Validation	Full Central Spine	L4 autonomous driving dedicated lane, vehicle-infrastructure cooperation, unmanned delivery testing
5	AI+ Healthcare Validation Platform	Validation	Xiaoyuehe Wing	Community AI-assisted diagnosis, privacy-computing medical data, remote surgery demonstration
6	AI+ Urban Governance Sandbox	Validation	Full Site	Urban event AI sensing, emergency response simulation, public space pedestrian flow prediction
7	AI Living Showcase	Living	Dazhongsi	Global AI new product launch experience, AI fashion/beauty/food
8	AI+ Education Borderless Classroom	Living	AI Origin Community	Personalized learning paths, AI tutoring, lifelong learning
9	AI+ Health Community Station	Living	Xiaoyuehe Wing	Daily health monitoring, AI traditional Chinese medicine, mental health companionship
10	AI Park Guide	Living	Central Spine	AR historical narration, AI natural science education, smart fitness
11	AI Art Co-Creation Space	Culture	Dazhongsi	AI-generated art exhibitions, human-AI collaborative creation, digital collectibles
12	AI Food Lab	Culture	Dazhongsi	AI recipe development, personalized nutrition, robot restaurant
★	Innovation Annual Ring Memory Interaction	Symbiosis	AI Origin Community	The path senses walking and lingering, generating personal annual ring patterns; scan to save your own ring
★	Open-Source Bench Public Creation	Symbiosis	AI Origin Community	Open APIs allow submitting interaction programs, live after community review; your code becomes city memory
★	AI Symbiosis Garden Immersion	Symbiosis	AI Origin Community	Digital life communities respond in real time to pedestrian flow, temperature, bloom; every visit is different

Nine Years, Three Phases

Spine North Launch

2026 — 2028 (Years 1–2)

- Zhongzhi Park AI acceleration zone starts
- Northern central park completed
- Spine Gate landmark completed
- Innovation Annual Ring Path pilot
- Inaugural JZ-AI Con

Origin Takes Shape

2029 — 2031 (Years 3–5)

- AI Origin Community fully completed
- Open-Source Bench cluster live
- AI Symbiosis Garden opens
- Three-core autonomous driving connected
- AI governance sandbox in operation

Full Spine Intelligence

2032 — 2035 (Years 6–9)

- Dazhongsi consumption area completed
- Central spine 8.7 km fully connected
- Two-wing ecosystem matures
- Global AI innovation brand established
- Exportable AI city standards

Annual Event System

JZ-AI Con (every autumn)

Jing-Zhang Innovation Week (every summer)

Open-Source Hackathon (quarterly)

AI Living Experience Day (monthly)

Compliance and Ethics Boundaries

- ✓ Personal data: privacy computing + on-device inference + human review
- ✓ No omnipresent surveillance deployed
- ✓ No social credit scoring
- ✓ Open-source interactions live after community review
- ✓ All spatial recommendations are conceptual; not government approval

"The rails of Jing-Zhang witnessed a generation's dedication; Zhongguancun witnessed a generation's creation.
We hope to leave to the next generation [a public space where humans and digital life can coexist with tenderness.](#)"
