

Jing-Zhang Mobility Commons: An Enterprise–Resident Mobility Operating System

Accept one ordinary complete trip before expanding shared feeders.

This revision promotes only the Zhongzhiyuan and AI Origin interfaces inside both provisional bounds.

Dazhongsi remains an external transfer anchor: the mapped station is about 2.31 km from the rough-box centroid.

48 / 24 / 12 / 8 are planned coverage quantities, not performance claims before authorization and field records.

Five-minute review path

Ordinary-person chain

Entrance—crossing—curb—staffed handoff—fallback; accept one complete daily trip first.

Three interfaces

Zhongzhiyuan and AI Origin enter low-confidence geometry; Dazhongsi stays external and HOLD.

Six taskbook outputs

Cases, identity, ecosystem, components, signage and calendar resolve to handoff objects and roles.

Responsibility and stop

No start if authorization, field, access, fire, maintenance, complaint or receiver evidence is missing.

19 → 27: promote only in-bound, readable relations

19

Prior formal geometry

The v2.4 boundary, land-use, roads, green, public-space, constraint and phasing features.

+6

Low-confidence candidate nodes

Three per in-bound area; OSM anchors, authorization 0, field observations 0 and prerequisites remain.

+2

P0 audit sequences

They express an entrance—crossing—curb review order, not a measured route, redline or build dimension.

HOLD

Dazhongsi withheld

Three points and one line remain visual background because of the approximately 2.31 km geometry conflict.

Keep evidence states separate from planned quantities

0 / 0

Authorization and field

Both remain zero; every scenario remains not_run / HOLD.

48

Curb observation windows

Planned coverage, not an observed sample or operating result.

24 / 12

Route attempts / access walks

Plans only; completion and refusal causes await field records.

8

Blackout fallback drills

Plans only; lower-is-better conflict and closure metrics use explicit maximum comparators.

Study area and evidence state

MOBILITY COMMONS / 147228

REVIEW / v2.5

Jing-Zhang Mobility Commons

Enterprise-resident mobility | provisional spatial relationship

THREE INTERFACES, ONE ORDINARY TRIP

Review relationship only - not a surveyed route or approved alignment

CURRENT RELEASE STATE: HOLD

Two in-bound interface groups are formal low-confidence design evidence. Dazhongsi remains external because the provisional key-area geometry conflicts with the mapped station.

FIVE RELEASE GATES

- 01 **GEOMETRY**
official boundary + right-of-way
- 02 **DEMAND**
dated grouped counts + consent
- 03 **SAFETY**
access + fire continuity
- 04 **RESPONSIBILITY**
receiver + SLA + maintenance
- 05 **EQUITY**
human parity + rollback

AUTHORIZATION 0 | FIELD RECORDS 0

PROVISIONAL / NOT FIELD VERIFIED

Three key areas and stop conditions

Three key areas / Three operating roles

REVIEW / v2.5

Each area has a minimum pilot, accountable owner and stop condition

01	Zhongzhiyuan enterprise arrival	shuttle merge / loading pilot / reversible	STOP No permanent community ban
02	AI Origin resident daily	human parity / accessible pilot / reversible	STOP No home trajectory
03	Dazhongsi external anchor geometry conflict / HOLD	Confirm key-area-to-station relation first	STOP No fire/access blockage
服务水平 / SERVICE LEVELS 到达连续 route continuity 换乘可靠 transfer reliability 路缘有序 curb order 申诉闭环 complaint closure
