

JINGZHANG YIELD v2.0

In an AI city, machines learn to yield first.

3

distinct prototypes

5

physical components

12

same-task scenarios

84/84

synthetic matches

+18%

machine path cost

01

One yield band in a real context

Three areas, three conflict topologies: test, threshold and peak

WHY HERE

- PUBLIC REALM EXISTS**

Fishbone slow mobility: design interfaces, not a blank greenway

LOCAL-JINGZHANG
- PUBLIC INTERFACE**

AI Origin visits + civic AI learning

LOCAL-AI-ORIGIN
- TESTBED CONTEXT**

Governance/service tasks need a human baseline

LOCAL-TESTBED
- REAL HERITAGE LIMIT**

Qinghuayuan review becomes a stop gate

LOCAL-HERITAGE

V2.0

3

prototypes

5

components

12

scenarios

YIELD

Spatial choice: three layouts + three prototypes

02 Three equal-width layouts: choice and cost

One conceptual 8.4 m × 108 m frame; comparison, not survey or global optimisation

WHY ALT-C IS SELECTED

2.8 m

continuous human spine

1

crossing / 100 m

18 m

max retreat

100%

diagram continuity after power loss

ADVERSE RESULT

+18%

Machine travel is longer than fully mixed use. This is an explicit value choice, not an omission.

Cannot keep 2.8 m → do not squeeze people; time-separate or relocate

Participant-authored concept layer • provisional boundaries are not official redlines • field performance unknown 02/05

03 Three key areas: three spatial conflicts

Shared components; different topology, human baseline and stop gate

Participant-authored concept layer • provisional boundaries are not official redlines • field performance unknown 03/05

Ordinary passage and delivery evidence

04 Ordinary passage first; AI enters second

One human spine across day, night, rain and failure; all twelve scenarios have parity

Participant-authored concept layer • provisional boundaries are not official redlines • field performance unknown 04/05

05 Separate proof, target and unknown

Synthetic pass ≠ field safety; concept dimension ≠ compliance; unknown stays unknown

Participant-authored concept layer • provisional boundaries are not official redlines • field performance unknown 05/05
