

THE COMMON EAVE 2.0

A conceptual atmosphere view: civic life under a reversible Shared Eave after rain.

Original generated concept visual. It is not a site photograph, approved rendering, surveyed siting, engineering detail, or metric evidence.

Conceptual drawing only. Provisional package geometry is not statutory control, surveyed siting, or engineering alignment.

01 / OVERALL POSITION

THE COMMON EAVE 2.0

A civic interface system within, not above, Haidian's current planning frame

CONTEXT, NOT A BOUNDARY SWAP

The competition's research, design and three provisional key-area scopes remain authoritative for this package. The newly approved district plan is a public planning context: one belt, one axis, two centres and multiple nodes.

V6.1 INSERTION

- A heritage-climate spine
- Five cross-city seams
- Three differentiated public tests
- Two buildable civic flagships

43.6 km2

Research

AI industry + future city

11.4 km2

Design

Public realm + urban renewal

3 areas

Detailed

Conceptual public prototypes

Concept drawing from package GeoJSON | provisional perimeter in red | not a statutory redline or project siting

02 / SPATIAL SYSTEM

A CIVIC INTERFACE, NOT A MONOLITHIC BELT

Land-use roles are shown as concept units; no parcel or statutory controls are claimed

THREE PUBLIC OPERATING ROLES

Qinghe benchmark garden

Keep and calibrate
Canopy, rain observation, repair table

AI Origin shared eave

Open and translate
Study, care, repair, human service

Dazhongsi four-corner commons

Arrive and share
Transfer, pause, curb, night help

AI ECOLOGY / PUBLIC-VALUE LOOP

Concept land-use topology is a discussion device only; recalibrate against official boundary, parcel and existing-condition data

03 / KEY-AREA DETAIL

THREE PLACES, THREE DAILY CONTRACTS

The districts are differentiated by public work, not by decorative theme

01 Qinghe Benchmark Garden

garden innovation district

Problem: green assets risk becoming display space.

Move: a monitored garden with a public care table.

Gate: tree, water, ecology and lighting review.

02 AI Origin Shared Eave

near-campus innovation district

V6.1 concept atmosphere / not site evidence

Problem: daily learning and care lack a civic threshold.

Move: a detached, reversible six-bay eave.

Gate: heritage, roots, fire, noise and steward review.

03 Dazhongsi Four-Corner Commons

urban innovation district

V6.1 concept atmosphere / not site evidence

Problem: a station edge divides arrival, care and night use.

Move: four public rooms and a ground-first soft X.

Gate: traffic, station, accessibility and drainage review.

All three diagrams are conceptual 1:500-type planning diagrams, not surveyed plans, approved siting or construction drawings

04 / PUBLIC REALM

MOVEMENT, CLIMATE AND CARE SHARE ONE GROUND

The design begins with a dry, step-free route and human help; AI is a secondary layer

FIVE SEAM TYPES

- station arrival
- safe waiting
- heritage everyday
- shared learning
- river-park transition

CONCEPT SECTION: A DRY, PUBLIC, MAINTAINABLE EDGE

Concept mobility and blue-green system from roads, green-space and public-space GeoJSON; no unverified traffic, drainage or structural performance claim

06 / PLAN · SECTION · DETAIL

FLAGSHIP 01 – THE SHARED EAVE

A civic climate threshold: detached from heritage, reversible by bay, useful without a phone

CONCEPTUAL PLAN / 1:500 TYPE

CONCEPTUAL LONG SECTION / 1:200 TYPE

ONE BAY / 1:50 TYPE

Spatial dimensions show a reversible design grammar only; all siting, structural, heritage, tree and drainage decisions remain professional gates

07 / PLAN · TIME · STEWARDSHIP

FLAGSHIP 02 – FOUR-CORNER COMMONS

A station-edge civic room organised by time, care and ground-first access – not by a speculative bridge

CONCEPTUAL PLAN / 1:500 TYPE

ground-first routes + corners are a concept, not an approved crossing design

TIME IS A DESIGN MATERIAL

AM peak	arrival path + cycle short stay
Midday	public help + non-commercial pause
PM peak	shared curb + legible waiting
Night	staffed help + restrained light

CIVIC WEATHER STEWARD

Inputs: weather, aggregate observations, maintenance reports.
Output: a proposed service state only. A named human accepts, changes or refuses it; no face recognition, traffic control or automated approval.

No road geometry, signal timing, underground works or station engineering is asserted; test first through observed routes, accessible audits and agency review

05 / EVIDENCE + DELIVERY

EVIDENCE MUST CHANGE FORM

A claim is visible only when its source, spatial expression, owner and stop rule can be read together

FOUR EVIDENCE ROLES – NEVER CONFUSE THEM

UNKNOWN BY DESIGN: legal controls, parcel rights, exact site, real flows, tree condition, drainage capacity, budget and public approval

V6.1 REVIEW PROOF

Scope	competition scope + control-plan context
Place	overall map + three 1:500-type diagrams
Architecture	two plan-section-detail chains
AI	CWS-01: 18/18 fixtures; 10/10 hard stops; 0 automatic actions
Public	offline equivalence + care + free pause
Delivery	bilingual boards, geometry, QA, reproducible check

Known values are derived from package data; unknowns are retained as gates, not converted into artificial targets

08 Flagship delivery chain | detail, behaviour, maintenance and stop rules

08 / FLAGSHIP DELIVERY

DETAIL IS BEHAVIOUR + MAINTENANCE

The design becomes credible only when a resident, a steward and a repair worker can all finish their work

THE SHARED EAVE

- **Plan:** six daily rooms beside a dry route
- **Section:** detached roof, trees, rain edge
- **Detail:** isolate one bay without closing all
- **Steward:** static signs and staffed help remain

FOUR-CORNER COMMONS

- **Plan:** four public rooms around a soft X
- **Time:** arrival, care, exchange, night
- **Detail:** curb and cycle conflicts are observed
- **Steward:** propose, log, hand over, stop

COMMON RULE: if accessibility, free pause, heritage / tree protection, maintenance capacity or human stewardship fails, shrink or stop the pilot.

V6.1 detail chain is conceptual: it makes the required professional inputs visible rather than claiming that they are complete
