

Twin tracks: Time Track (heritage park slow spine) × Star Track (AI belt).

Three stations: Set Sail (R&D) → Origin (transfer) → Echo (landing);

two wings: Star Chart (IP/capital) · Trial Voyage (testing); interchanges where tracks meet.

Contemporary public layer with historical footnotes (启碇/津梁/觉生/司南/道生).

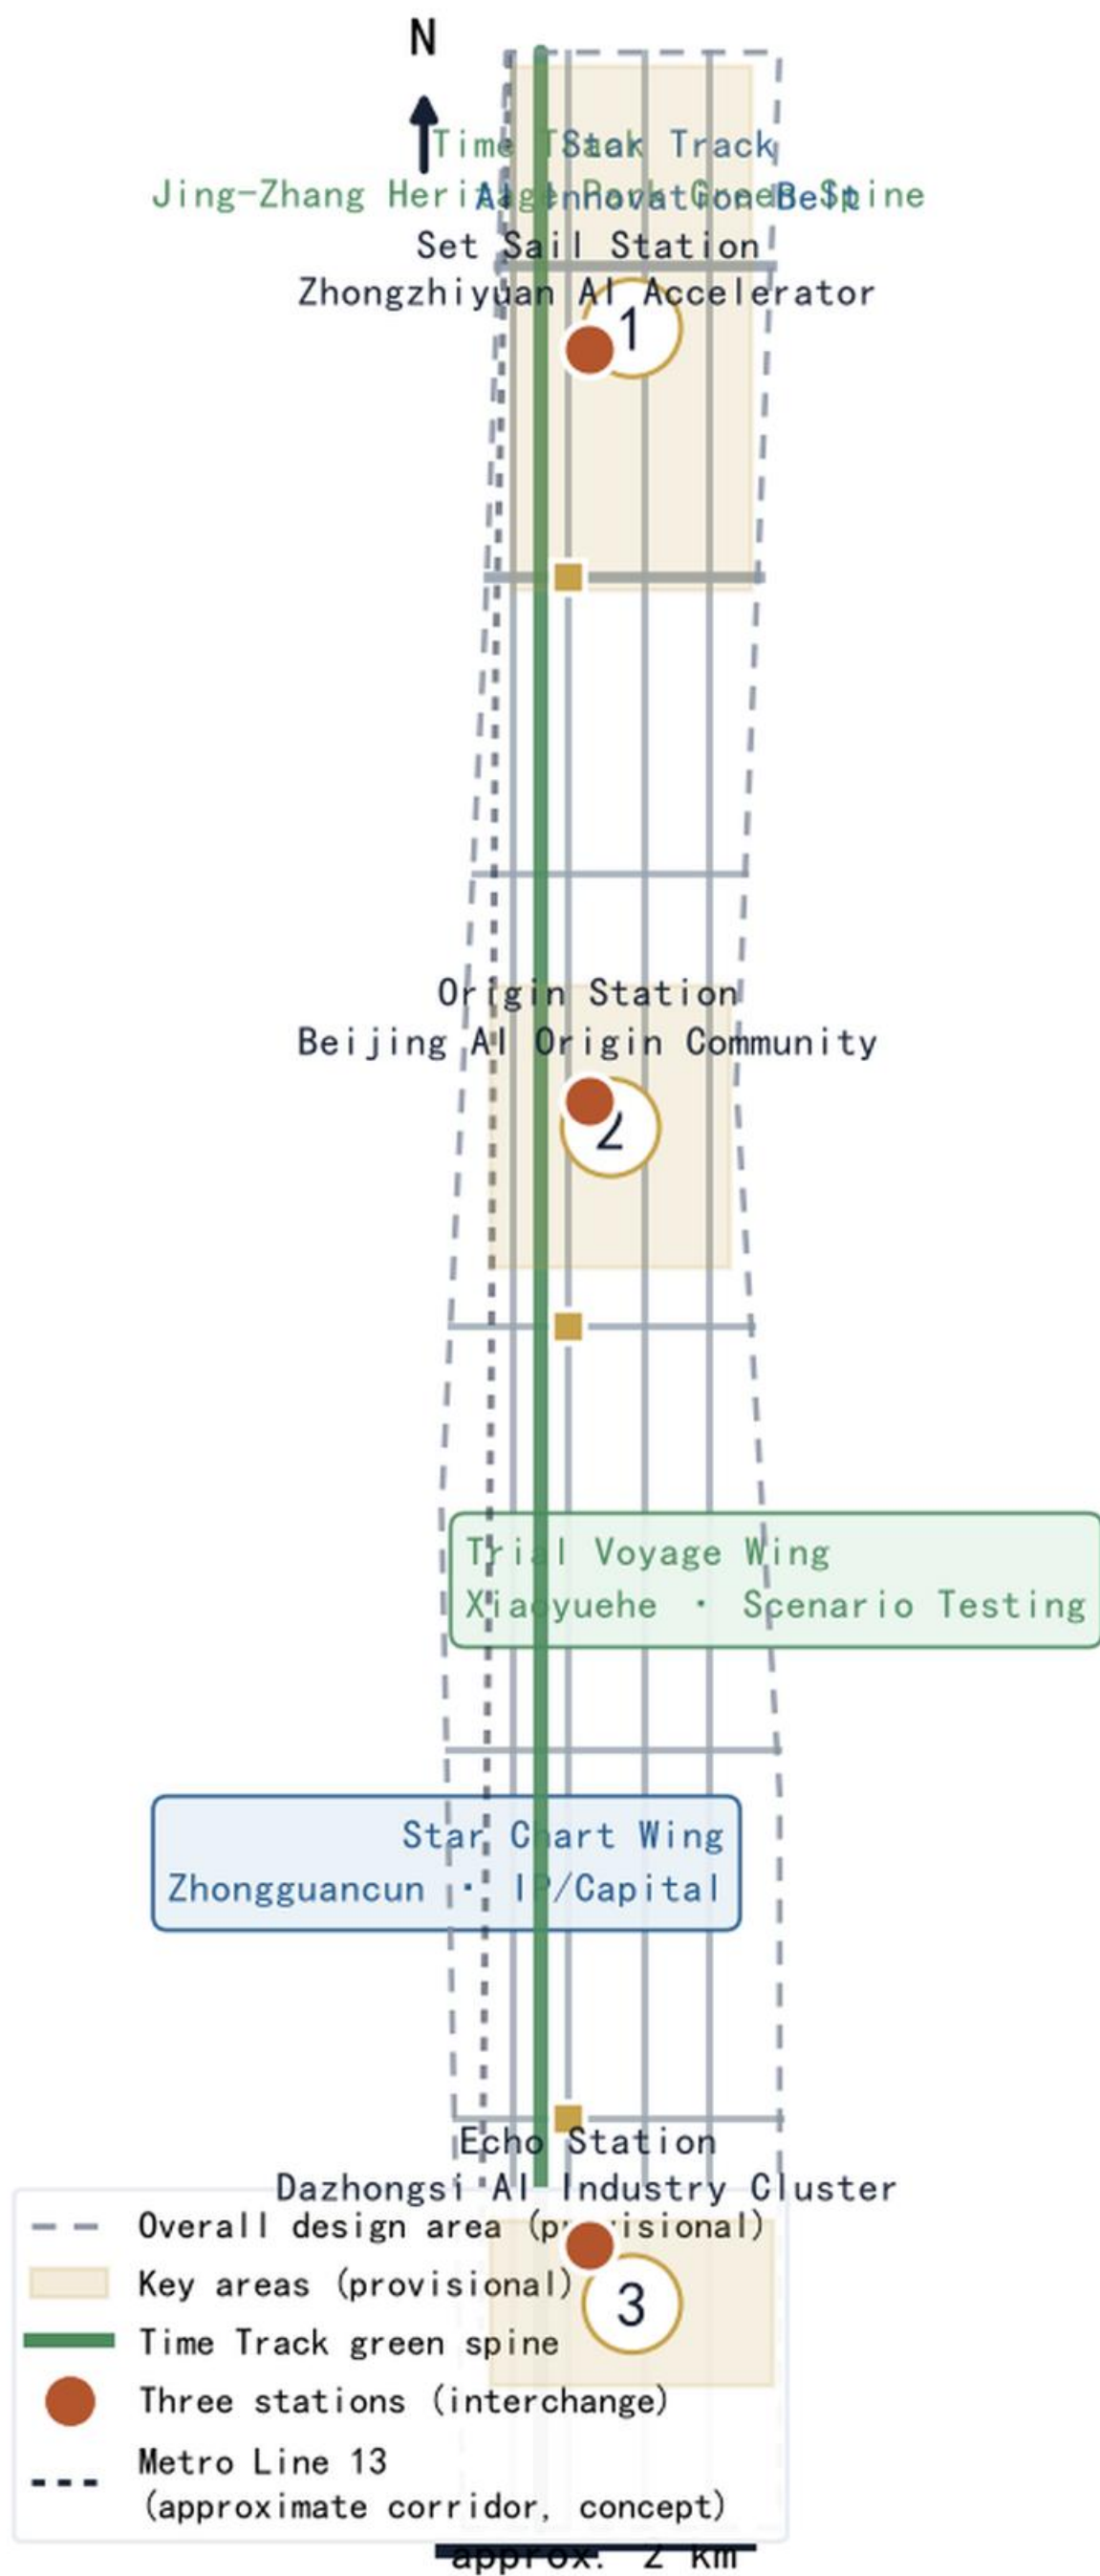

Isomorphic with Haidian's 'two hearts, one core'; echoes the 9-km park and Line 13/12 hub.

Logo direction: '人' zigzag between two rails, closed by a circular interchange;

colours: rust red (rail heritage) · ink (earth & rails) · star blue (AI light).

Brand: Twin Tracks Festival (concept).

Site Overview and Twin-Track Framework · Jing-Zhang AI Innovation Belt

Interchange node

Note: boundary is a provisional constraint, not an official redline; recalculate when official geometry is released.

Sources: provisional site boundary + key areas (repo geometry), open-city-ai/haidian public brief and public reports.

Twin Tracks · Jing-Zhang

Time Track × Star Track · From 0 to 1, endless echoes

0 → 1 → ∞

Set sail at Zhongzhiyuan, return to the university origin,
and echo globally: Set Sail → Origin → Echo →

Trial Voyage (testing) → Star Chart (capital/IP) → back to R&D

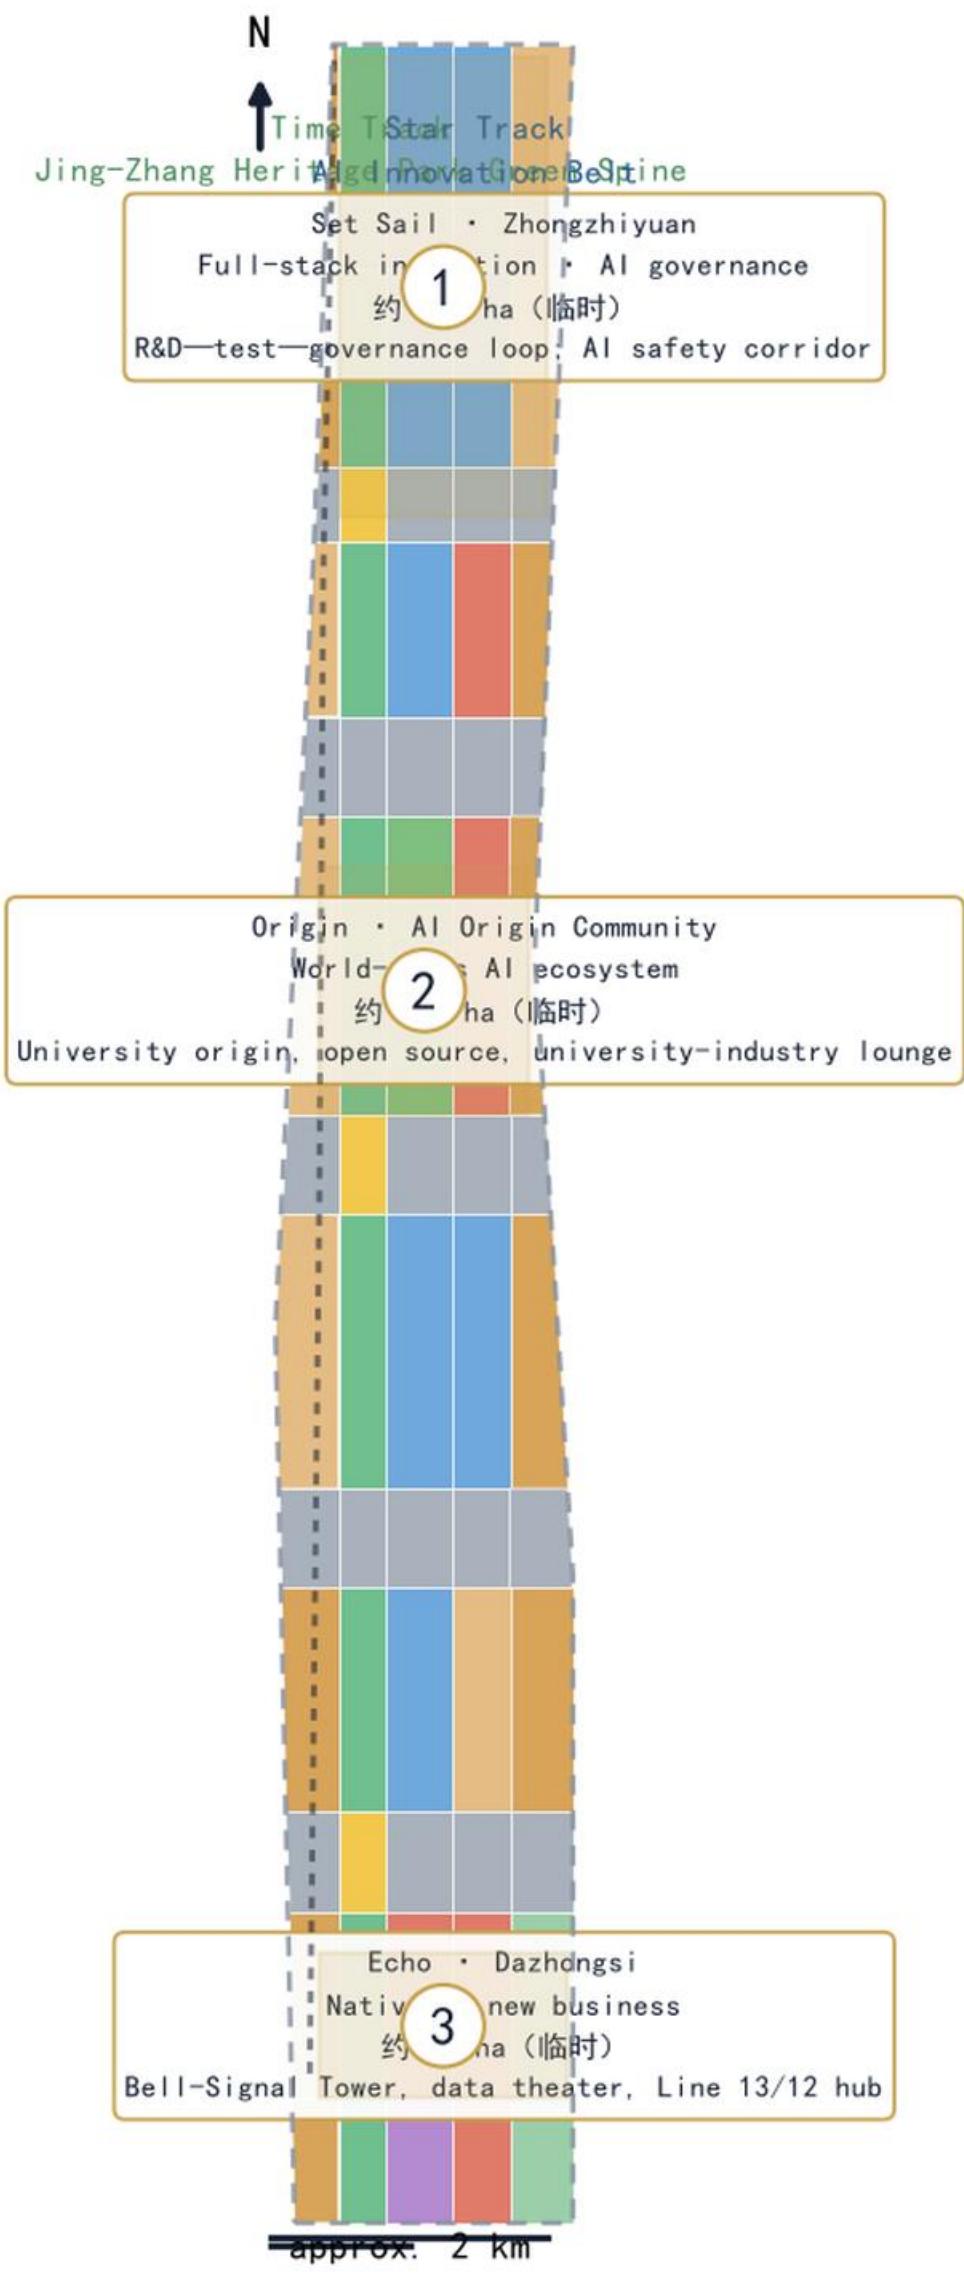

Isomorphic with Haidian district plan 'two hearts, one core':
Time Track carries the cultural green heart; Star Track carries the
science-city tech core; aligns with 'parallel smart city' policy and the
9-km heritage park (Phase 2 opened 2026-08) and Line 13/12 interchange.

Pending official data: statutory FAR, height, density, green ratio, ownership and demolition info; full recalculation after official boundary release.

Figure 10 is a vertical cross-section diagram of the Beijing AI Origin Community. The diagram shows a vertical stack of colored blocks representing different land use types. From top to bottom, the layers are: Research (blue), Education (red), Community (orange), Residential (yellow), Park green (green), Buffer green (light green), Plaza (yellow), and Road (grey). The diagram is labeled with 'N' at the top, 'Time' on the left, and 'Space' on the right. Key locations are marked: 'Jing-Zhang Heritage Innovation Base' at the top, 'Zhongzhiyuan AI Accelerator' below it, 'Origin Station' in the middle, and 'Beijing AI Origin Community' at the bottom. A scale bar at the bottom indicates 'approx. 2 km'. A legend at the bottom right lists the land use types and their percentages: Research (18.2%), Education (3.5%), Community (10.0%), Residential (13.1%), Park green (7%), Buffer green (3.6%), Plaza (2.3%), and Road (22.8%).

Detailed Design Index of Three Key Areas

1 Set Sail · Zhongzhiyuan

Full-stack innovation · AI governance

Area: 193 ha (provisional) / announced ~192.1 ha

R&D—test—governance loop; AI safety corridor

2 Origin · AI Origin Community

World-class AI ecosystem

Area: 104 ha (provisional) / announced ~104.3 ha

University origin, open source, university-industry lounge

3 Echo · Dazhongsi

Native-AI new business

Area: 72 ha (provisional) / announced ~72.0 ha

Bell-Signal Tower, data theater, Line 13/12 hub

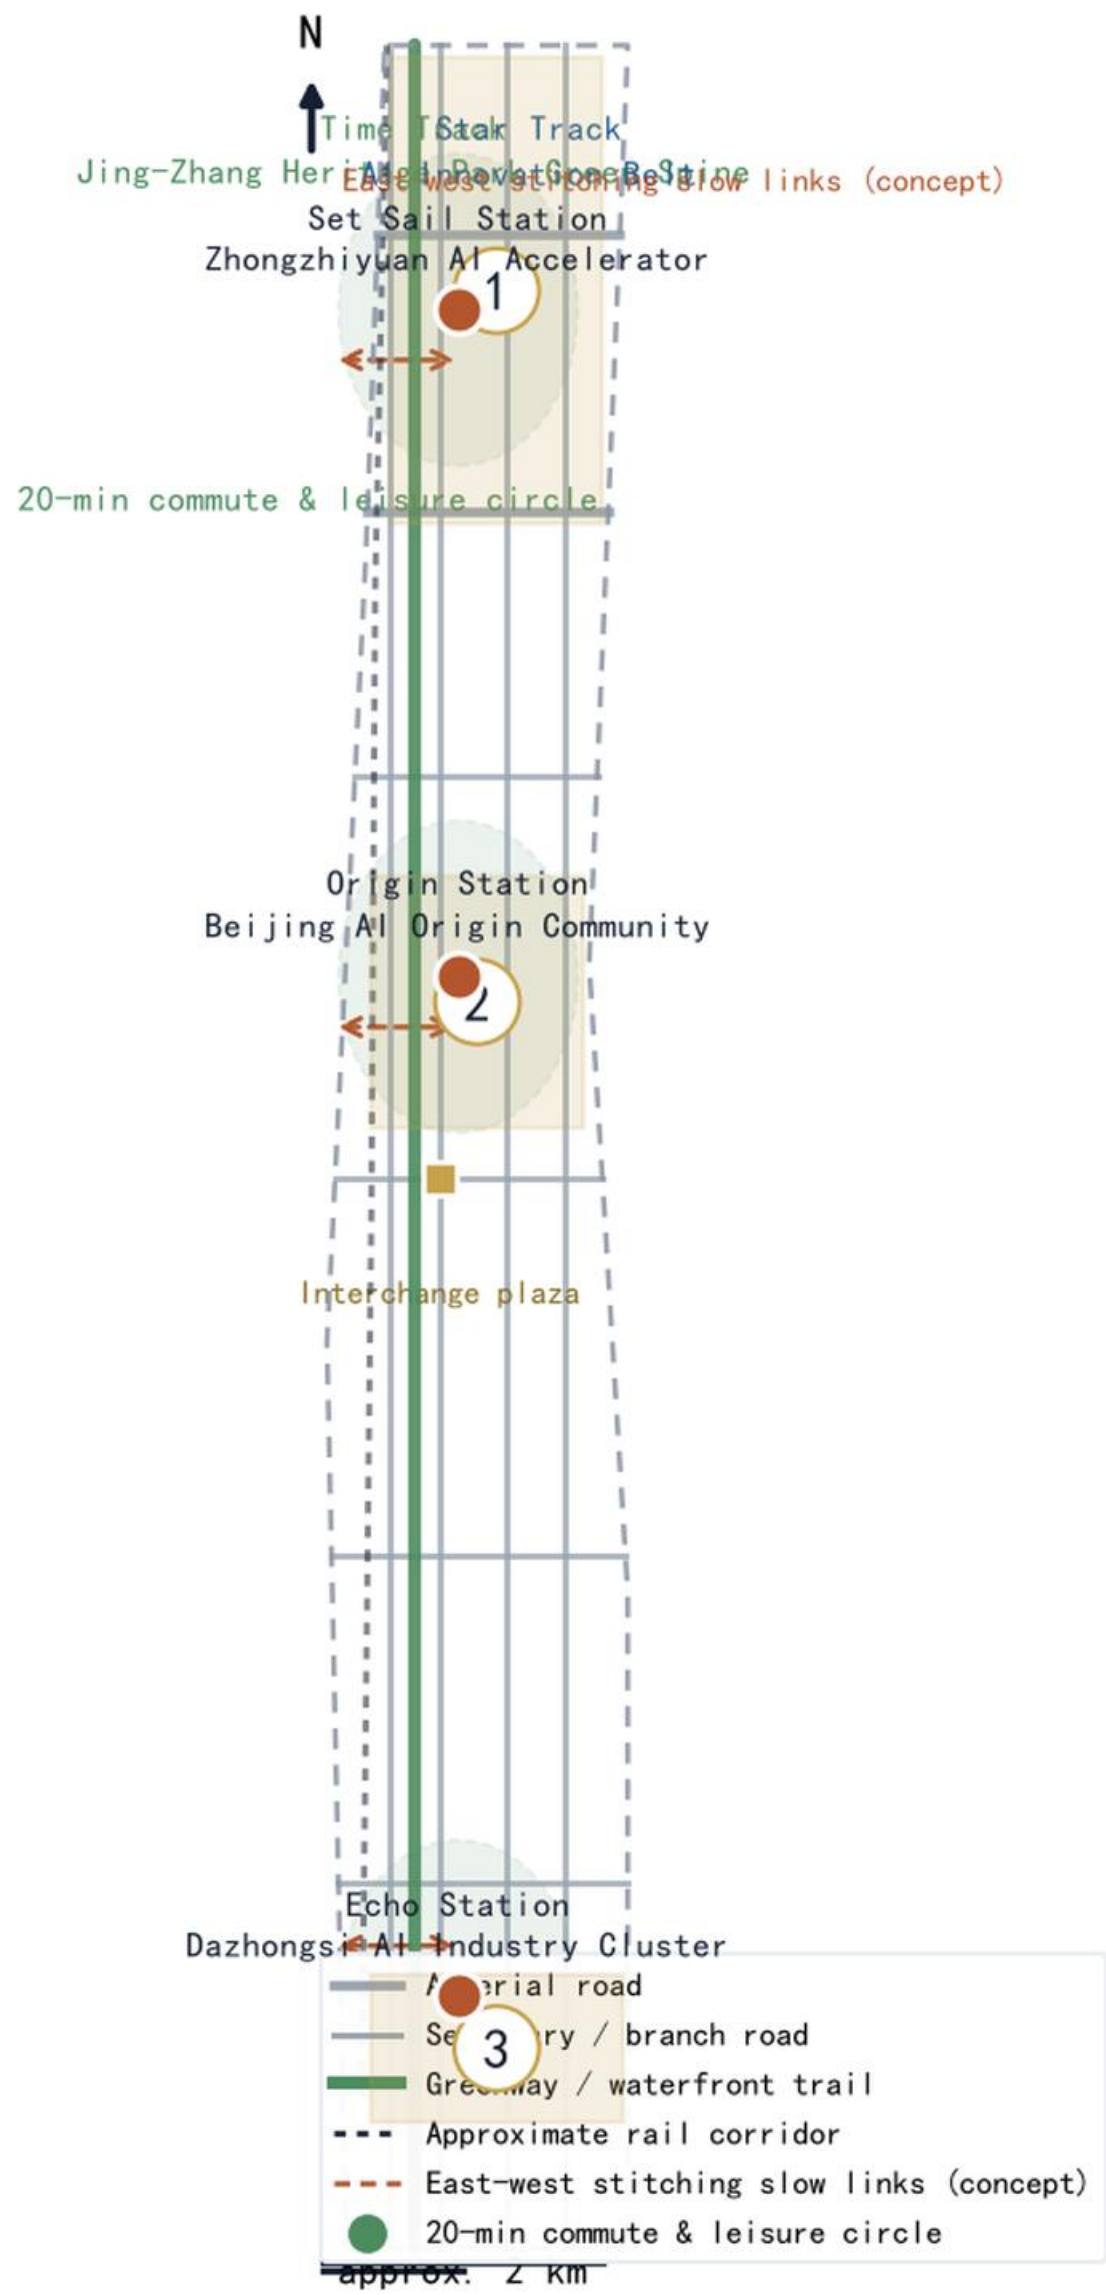

All three key areas are provisional constraints for directional design only;
recalculate areas and replace ranges when official KEY_AREA polygons are released.

14 scenario cards: Open Source Launch Hall, Agent-City Sandbox (test), Embodied-Intelligence Test Field (test), Slow-Network Gap Diagnosis (test), Talent Life Concierge, AI Safety Governance Corridor, University-Enterprise Lounge, Data-Factor Theater, Low-Carbon Compute Station, Jing-Zhang Memory Route, Developer Promenade, Signal of Honor Wall, Bell-Signal Pavilion, Festival Route. Landmarks: Ren Plaza, Open-Source Gallery, Bell-Signal Tower, Star Track Gallery (concept).

Five personas: developers/researchers, faculty & students, startups & firms, residents & commuters, global visitors; administrators collaborate in human review.

Sources: provisional site boundary + key areas (repo geometry), open-city-ai/haidian public brief and public reports.

Mobility, Blue-Green and Public Space System

North-South spine

Time Track greenway links three stations; Star Track organises R&D-transfer-landing segments

East-West stitching

Cross-track slow links and 'seam' spaces between universities/industry and west-side communities (concept)

Rail interchange

Echo Station uses the Dazhongsi Line 13/12 hub; Origin Station links Wudaokou / Qinghua East Road stations

Slow-network gaps

Agent-city sandbox and 'gap diagnosis' scenarios identify walking/cycling gaps; human review required

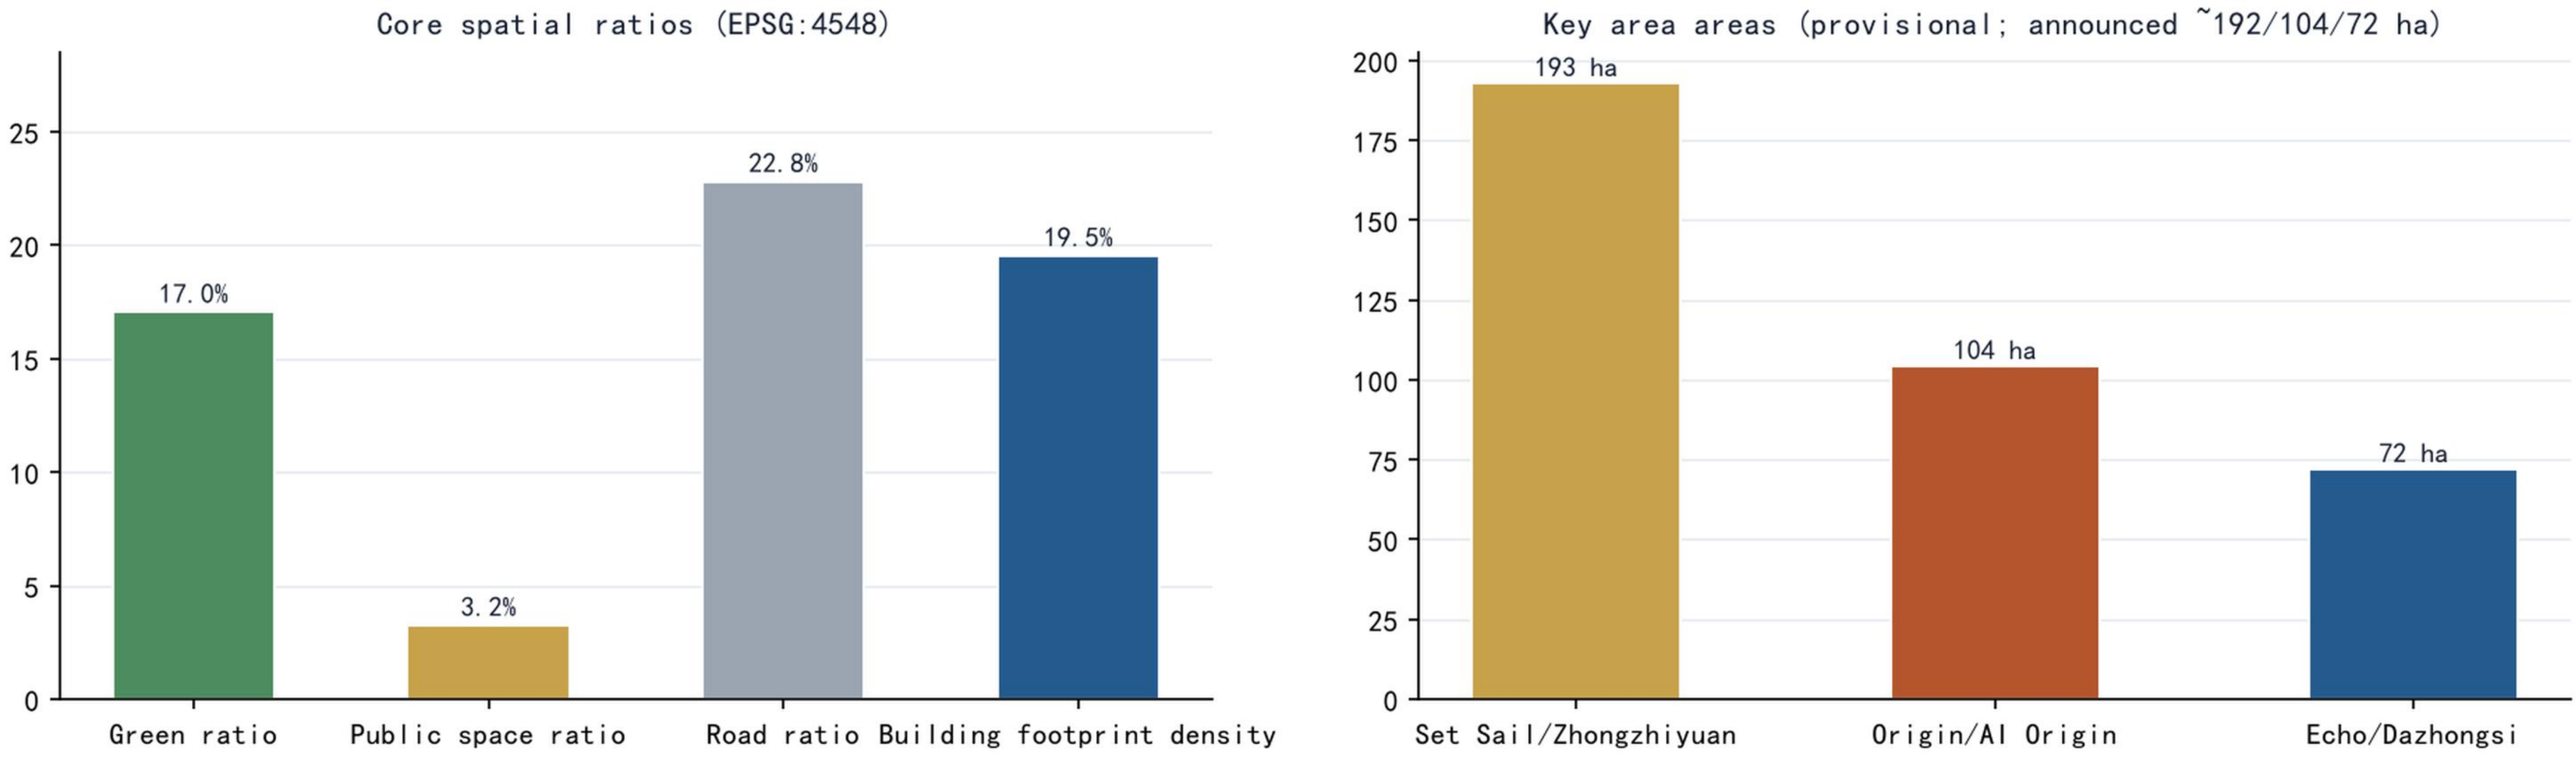

Blue-green system

Heritage green spine + Xiaoyuehe blue ribbon + three-path-one-green slow system; interchange plazas host events

Note: boundary is a provisional constraint, not an official redline; recalculate when official geometry is released.

Sources: provisional site boundary + key areas (repo geometry), open-city-ai/haidian public brief and public reports.

Core Metrics Recalculation and Evidence Chain

Phasing: P1 Set Sail/Zhongzhiyuan + north green (near term);
P2 Origin/AI Origin Community + middle (mid term);
P3 Echo/Dazhongsi + south (long term).
Renewal: green activation, station-city, community weaving, digital overlay.

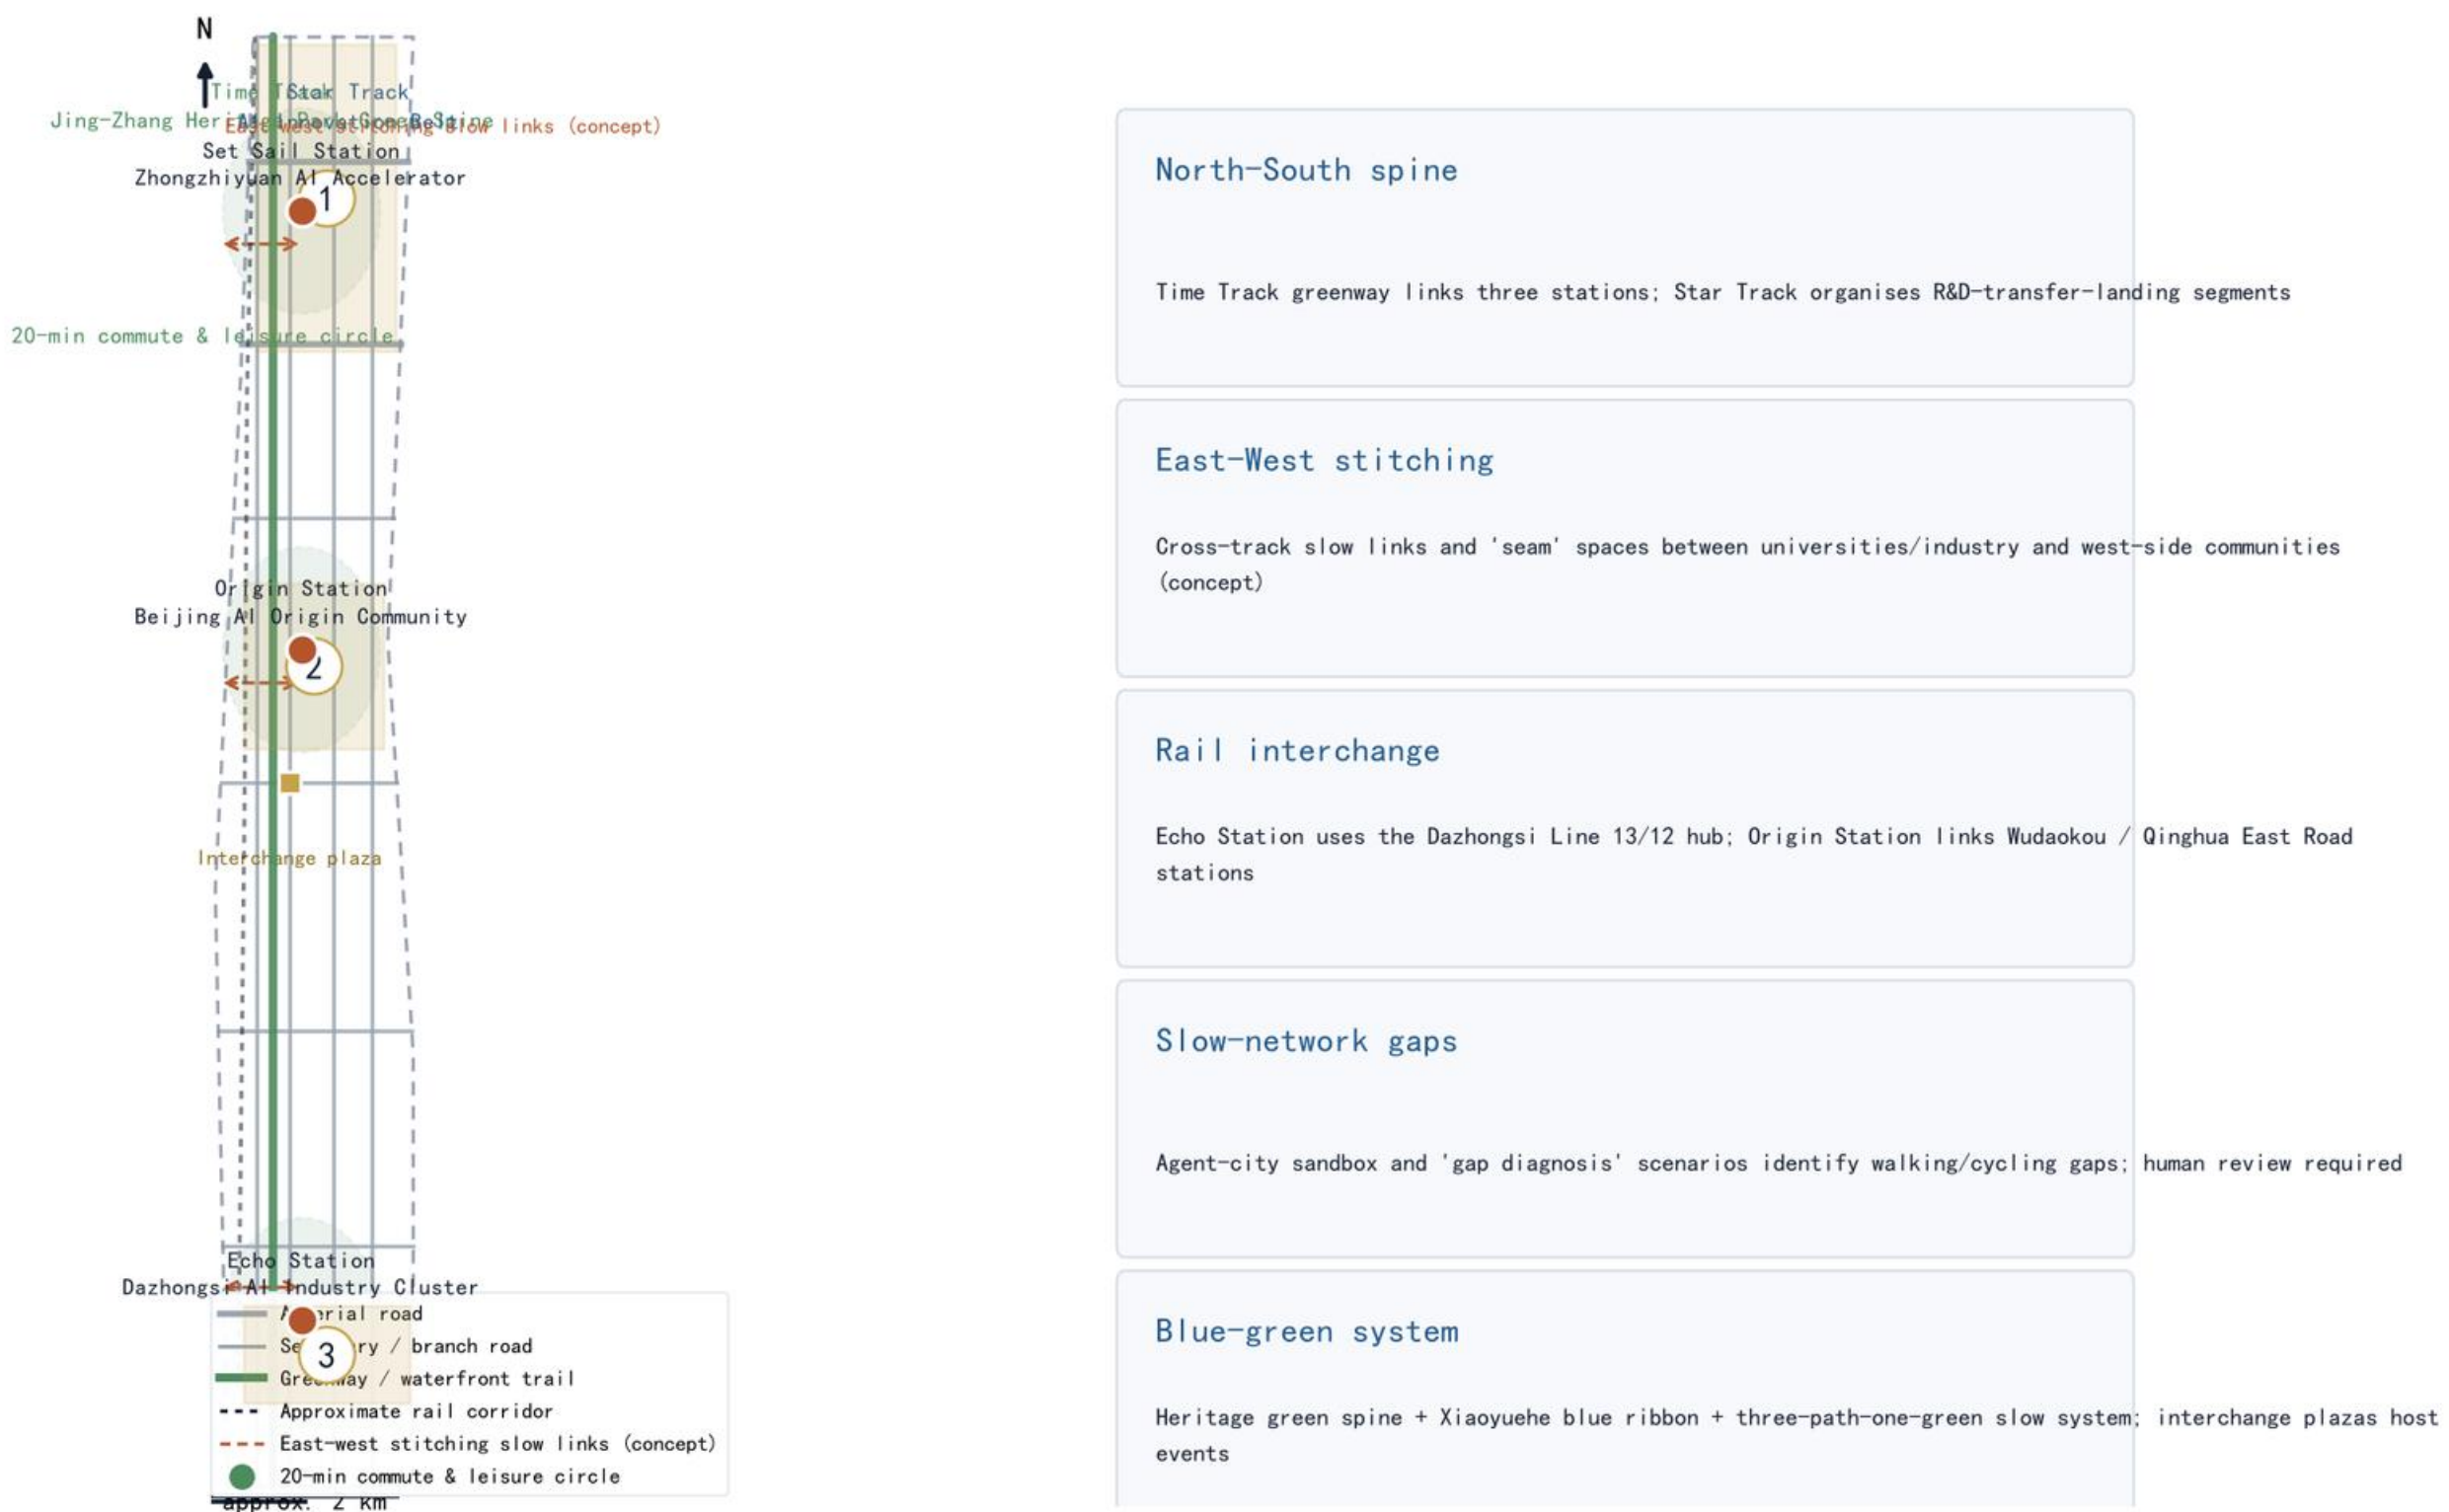

Operation: Twin Tracks Festival (dev week / open days / releases / co-creation);
developer loop 'contribute→display→honor': quarterly sandbox + human review.
Metrics: 11,412,825 m2 (provisional), green 17.0%, public space 3.2%.

Metric	Value	Formula	Confidence
site_area_sqm	11,412,825 m2	<code>polygon_area(site_boundary, EPSG:4548)</code>	medium
green_ratio	17.0%	<code>green_area / site_area</code>	medium
public_space_ratio	3.2%	<code>public_area / site_area</code>	medium
building_density	19.5%	<code>footprint / site_area</code>	medium
floor_area_ratio	pending official controls	<code>total_floor_area / site_area</code>	unknown

Evidence chain: geometry/*.geojson → EPSG:4548 projection → metrics.json → this figure and visual/index.html.
Statutory metrics such as FAR/height stay 'pending official data' and are never fabricated.
