

Jing-Zhang Timekeeping Belt • Keeping Civic AI On Time

One spine, three stations, eight points, two wings • Time Check Protocol: services expire by default, renewal requires evidence • provisional boundary, conceptual only

Fig.01 Overall concept & structure

Jing-Zhang Timekeeping Belt • Overall Concept

One spine, three stations, eight time-check points, two wings — keeping civic AI on time

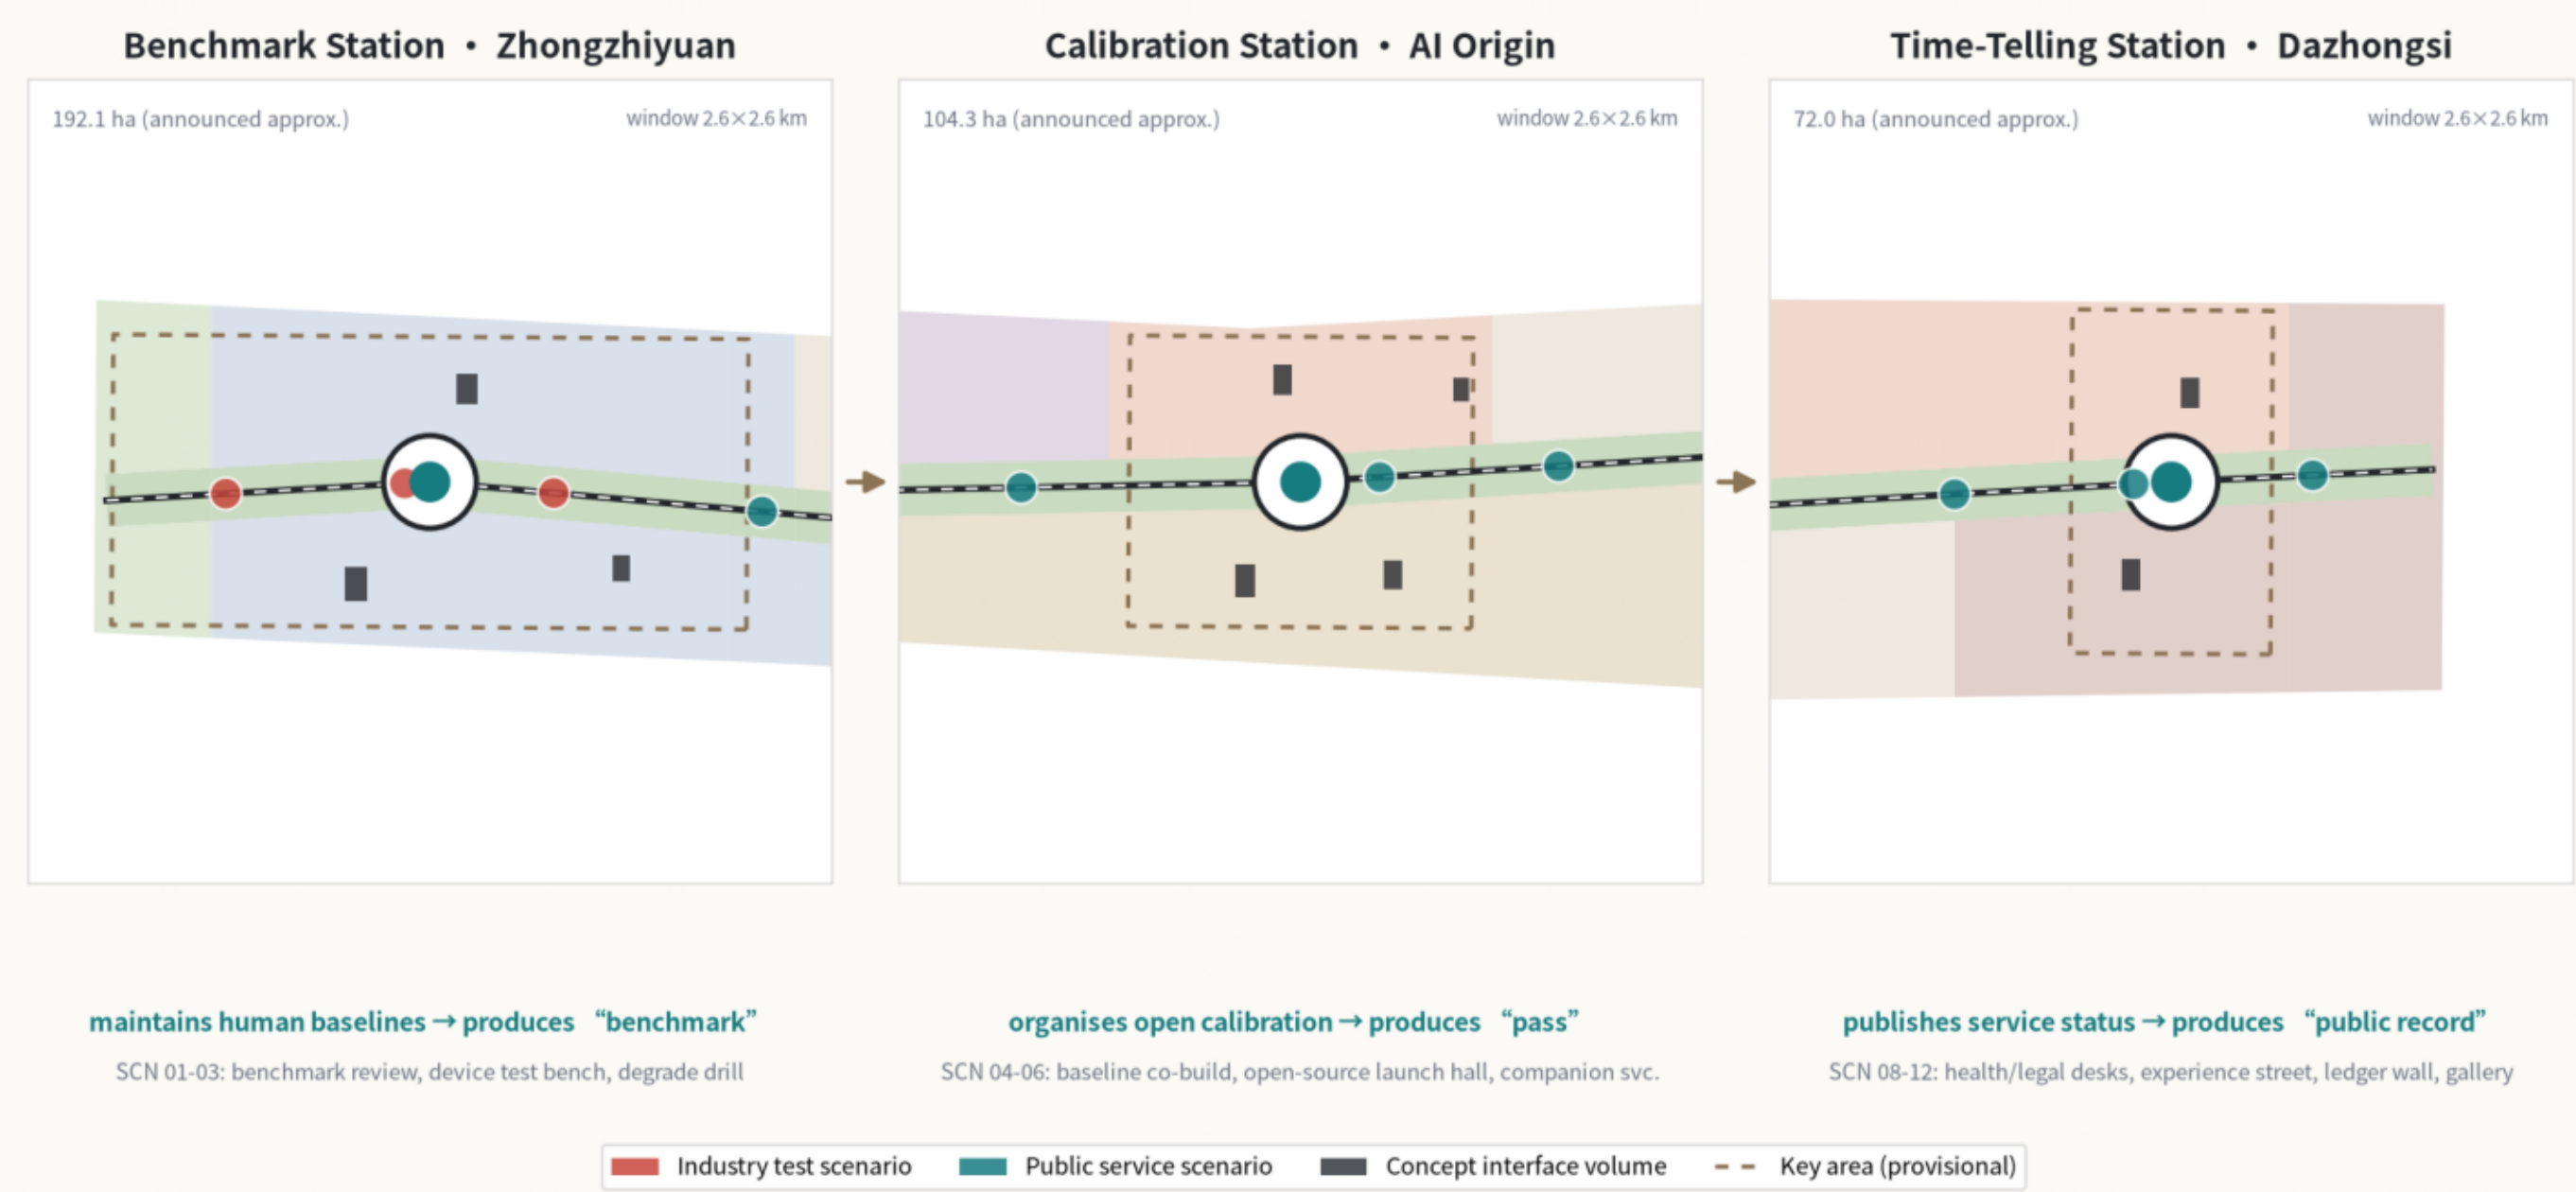

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Fig.03 Three timekeeping stations

Fig.04 Mobility & blue-green

Three Timekeeping Stations • Key-Area Detailed Design

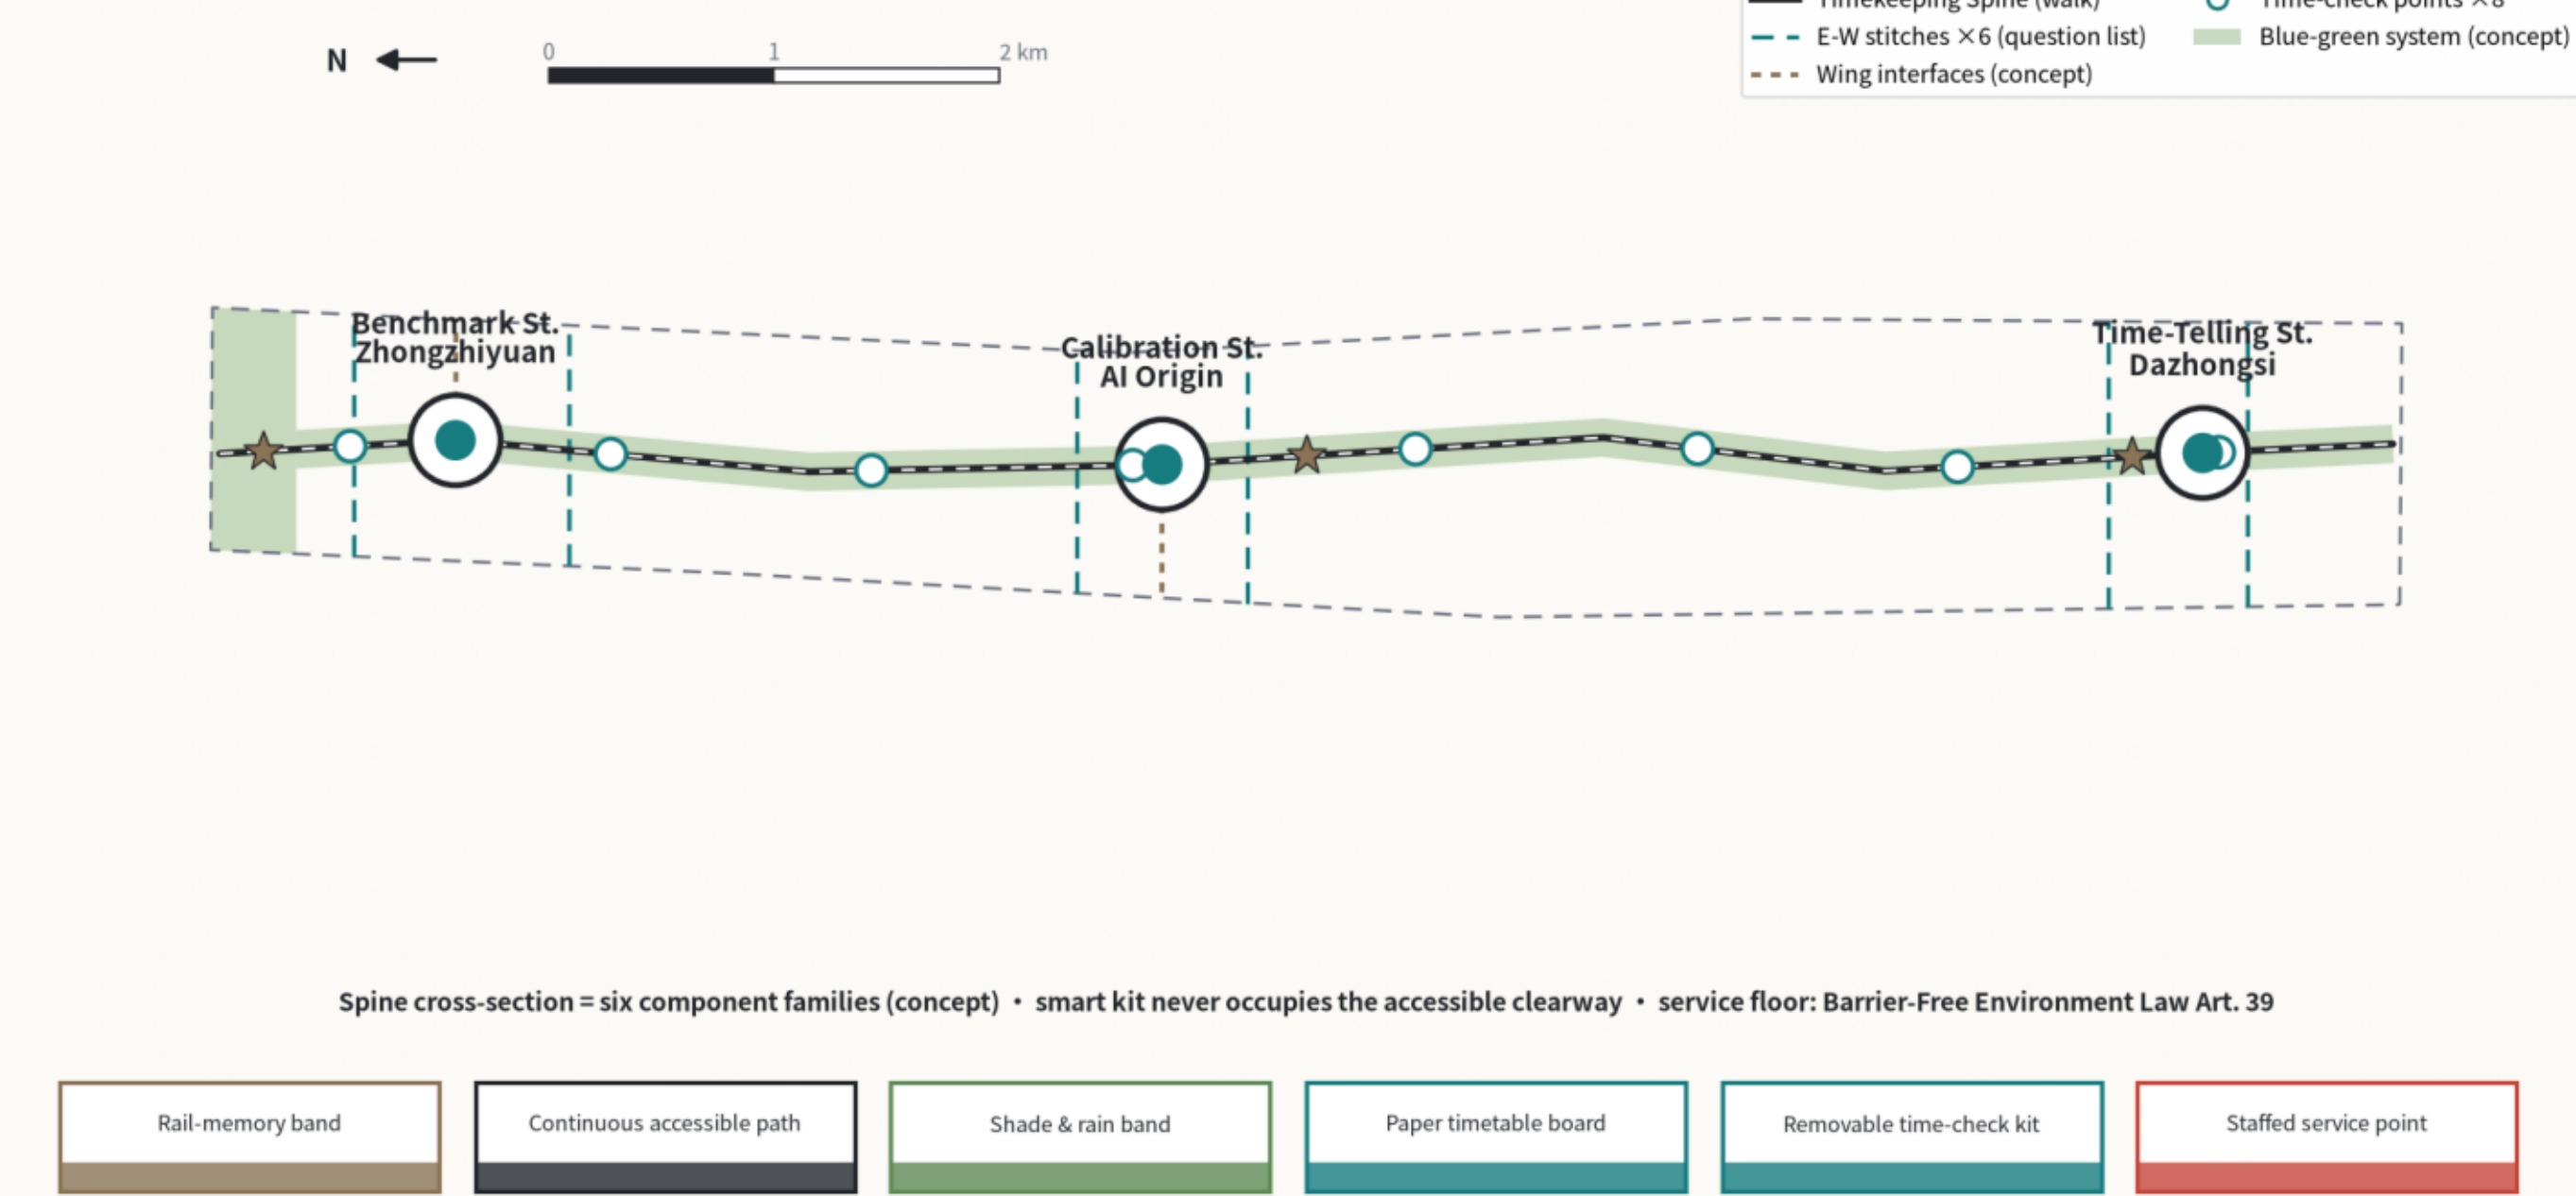

benchmark → pass → public record: three stations form one non-interchangeable timekeeping chain

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Slow-Mobility Network, Blue-Green System & Time-Check Points

One spine, six stitches, two wings • centrelines total 17,691.6 m • principles and data gates only — no traffic sizing claims

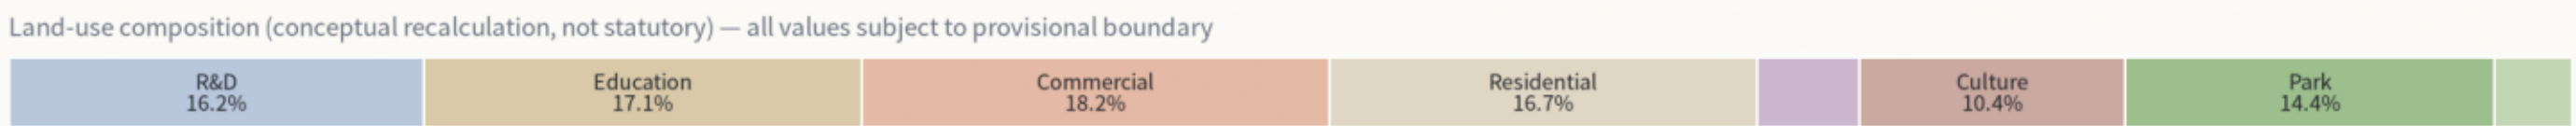

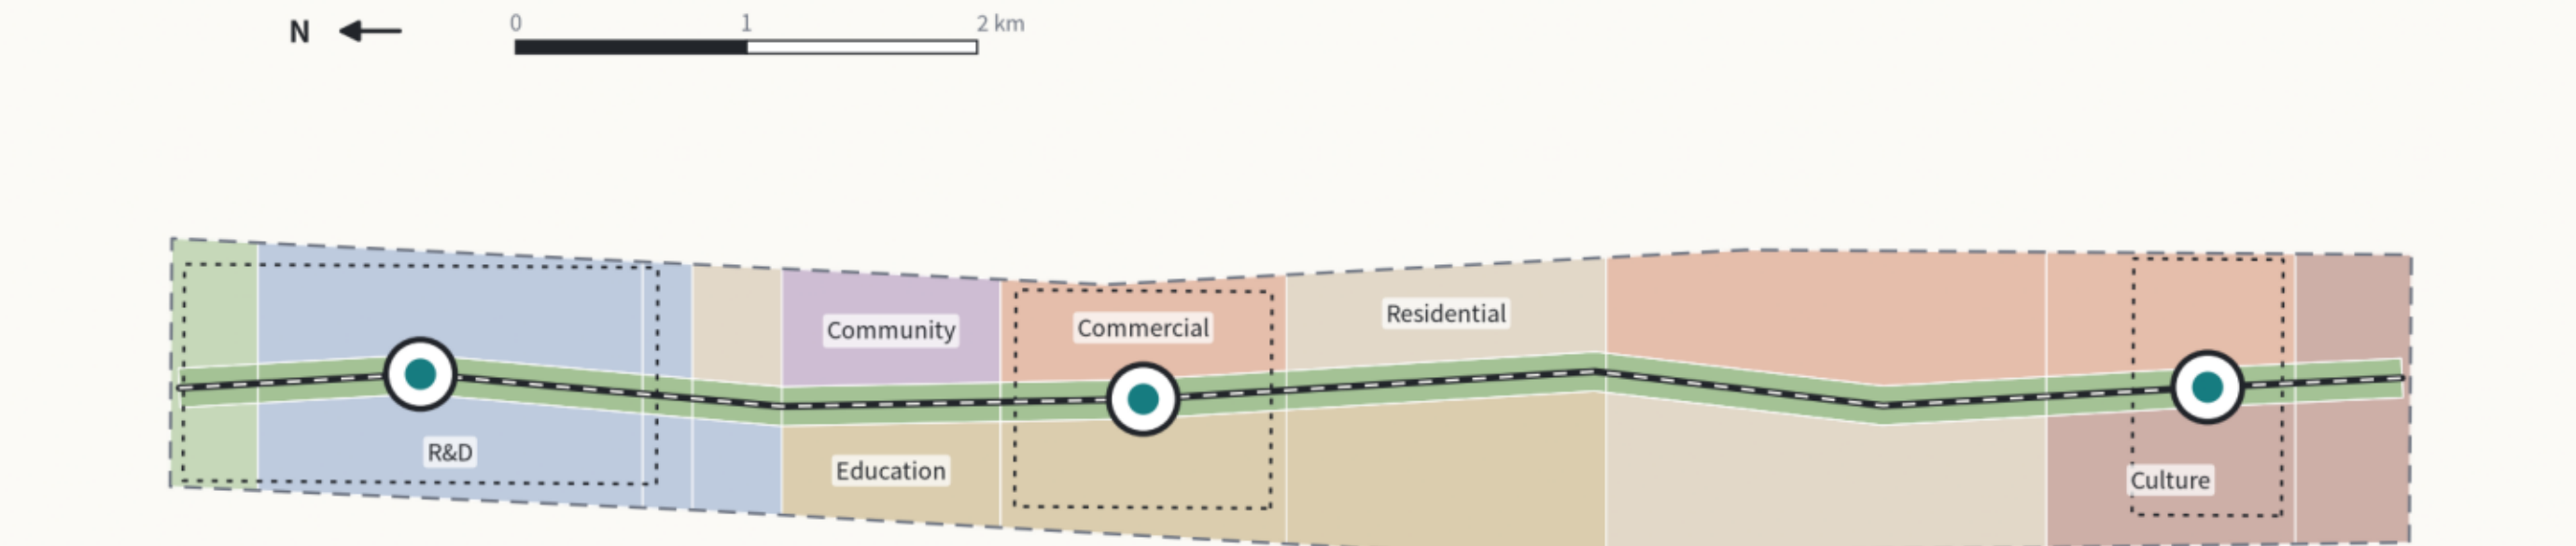

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Fig.02 Land-use partition

Complete Land-Use Partition & Spine Park Band

28 parcels seamlessly cover the provisional site • coverage 1.000000 • recomputed in EPSG:4548

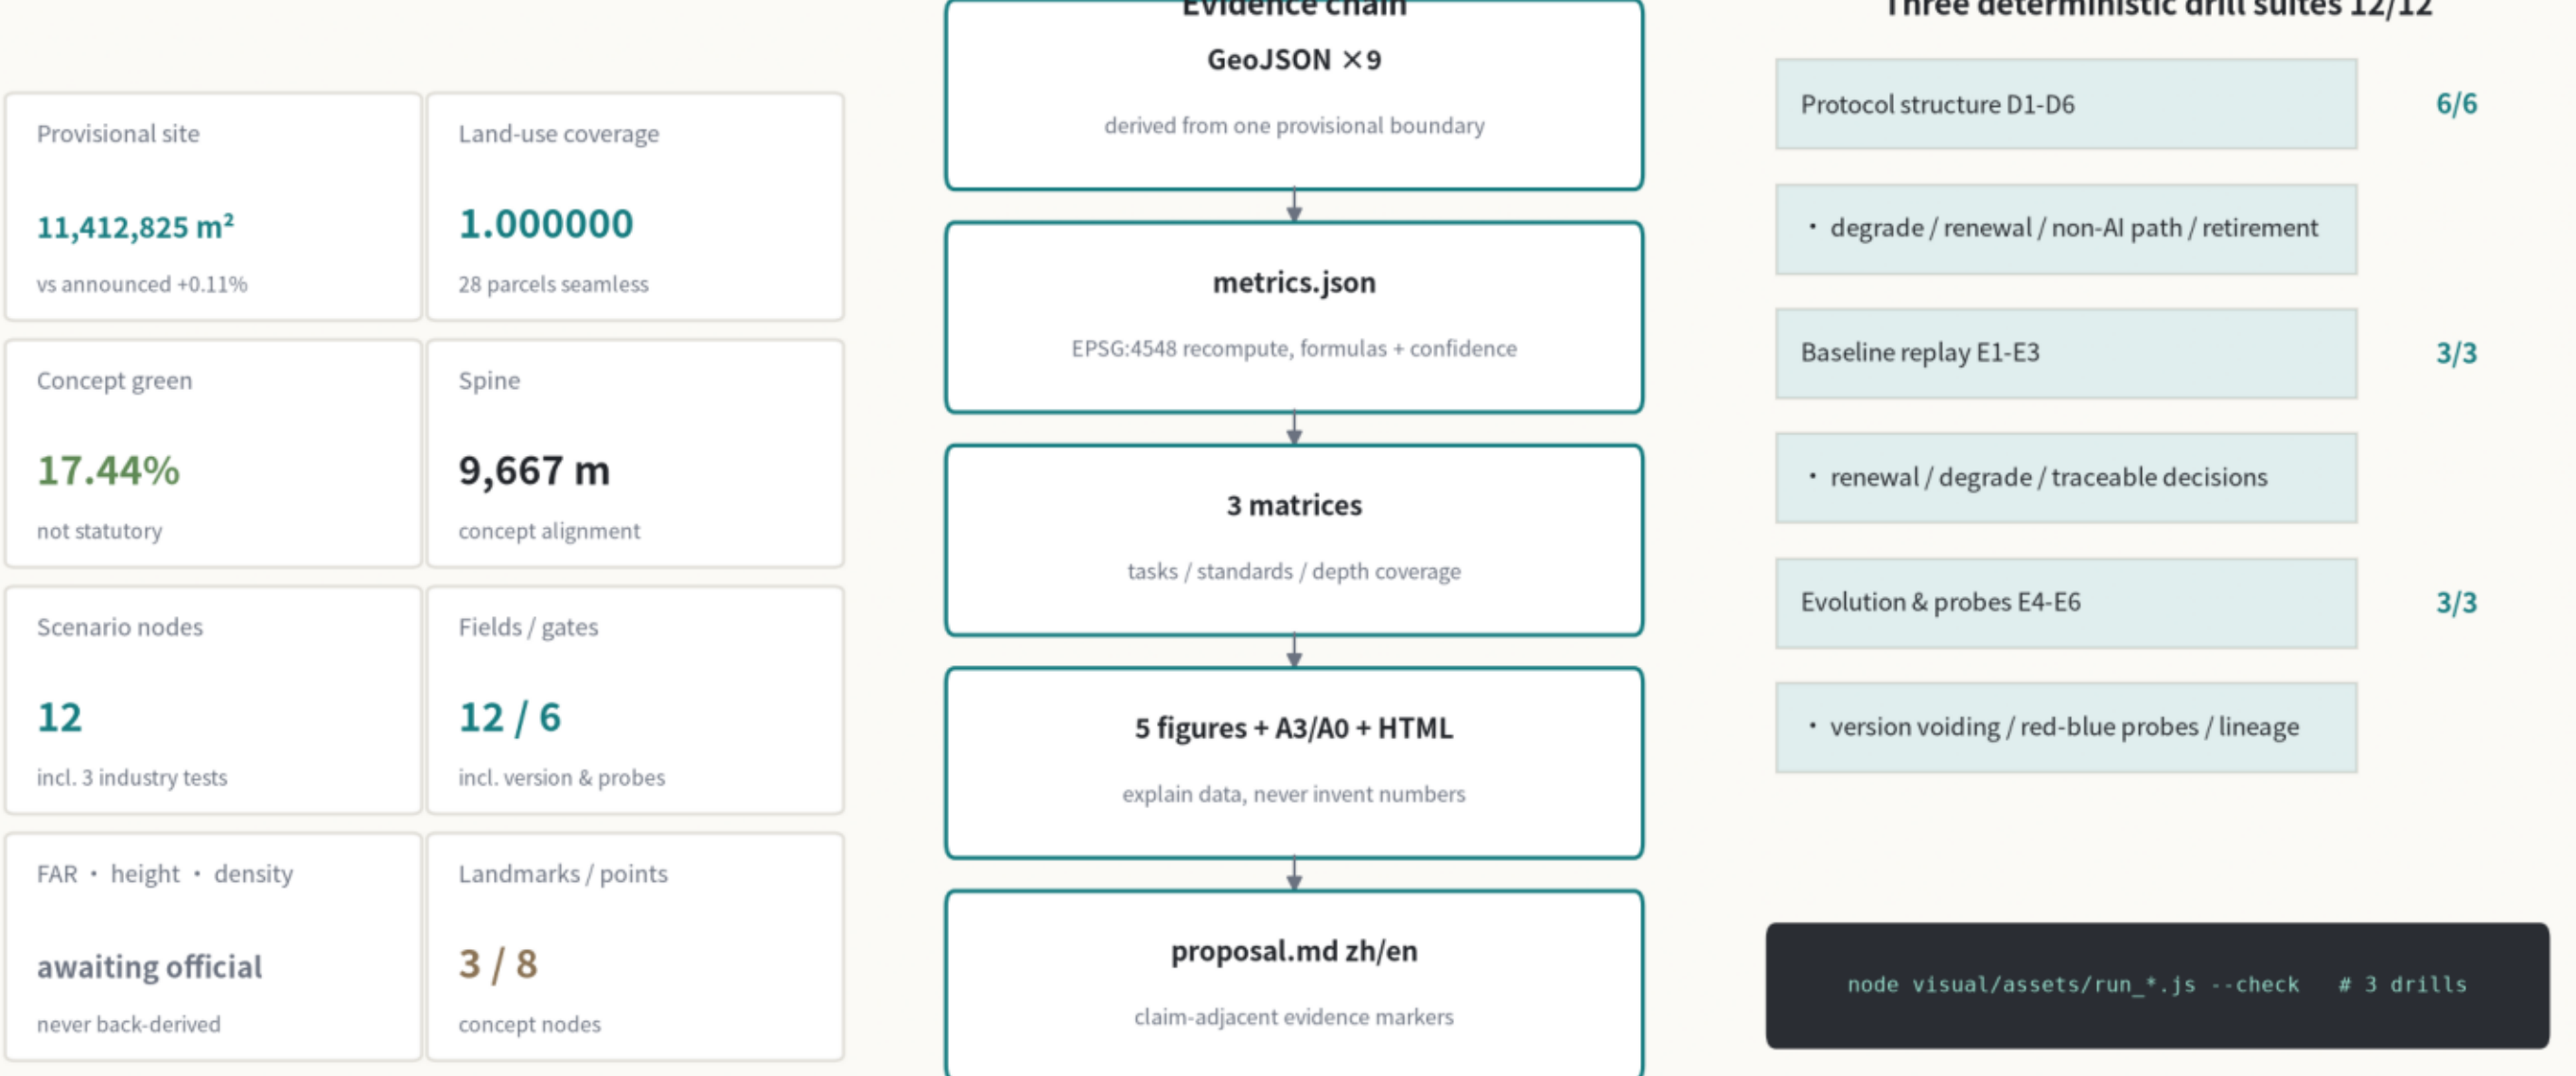

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Fig.05 Metrics & evidence chain

Core Metrics, Evidence Chain & Time Check Protocol

Narrative, layers, metrics and drawings cross-verify • three drill suites 12/12, byte-reproducible

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Twelve timetable fields: id • purpose • scope • minimum data • human role • non-AI path • baseline • window ≤180d • degrade plan • delay ledger • version binding • probe policy | Gates T0-T5 | three drill suites 12/12 (timecheck_tabletop / baseline_replay / evolution_probes)
