Core Metric Recalculation Evidence

Ratios recalculated from GeoJSON projected area (EPSG:4548); the 16.9 m2 site/phasing difference is a provisional boundary tolerance, pending recalculation. ~ indicates provisional temporary area, not a precise planning metric, and must not be used as a statutory redline.

Area topology difference note (~16.9 m2): site_area_sqm (11,412,825.386 m2) and phasing_area_sqm (11,412,842.304 m2) differ by 16.918 m2, caused by floating-point and topology tolerance of the provisional boundary partition; it does not represent a real area error. All recalculated metrics are limited by the provisional boundary; after the official redline is released the whole package must be recalculated (see metrics.json geometry_topology_note and renewal_projects.json geometry_area_note_zh).

Brand identity (agent.1): finalized Chinese name 'Jingzhang Zhimai Gongsheng Dai' (京张智脉共生带), English 'Jing-Zhang AI Symbiosis Belt'; visual direction draft at visual/assets/logo_direction.svg (pure geometry, no external assets referenced, not for external use before clearance).

The site boundary and key areas are provisional_constraint (official_boundary=false), used only for proposal generation, self-check and visualization, not as a statutory redline or precise-area basis; recalculate after official data is released. Area and ratio metrics can be recalculated directly from the submitted geometry; FAR, building height and total floor area are listed as unknown, pending official control-plan conditions.
