

B01 How open compute becomes civic infrastructure

Joint four-contract passport: make urban compute connectable, portable, accountable, retireable, and publicly valuable.

01 Overall index: six operating sequences, three handoffs, and the joint four-contract passport

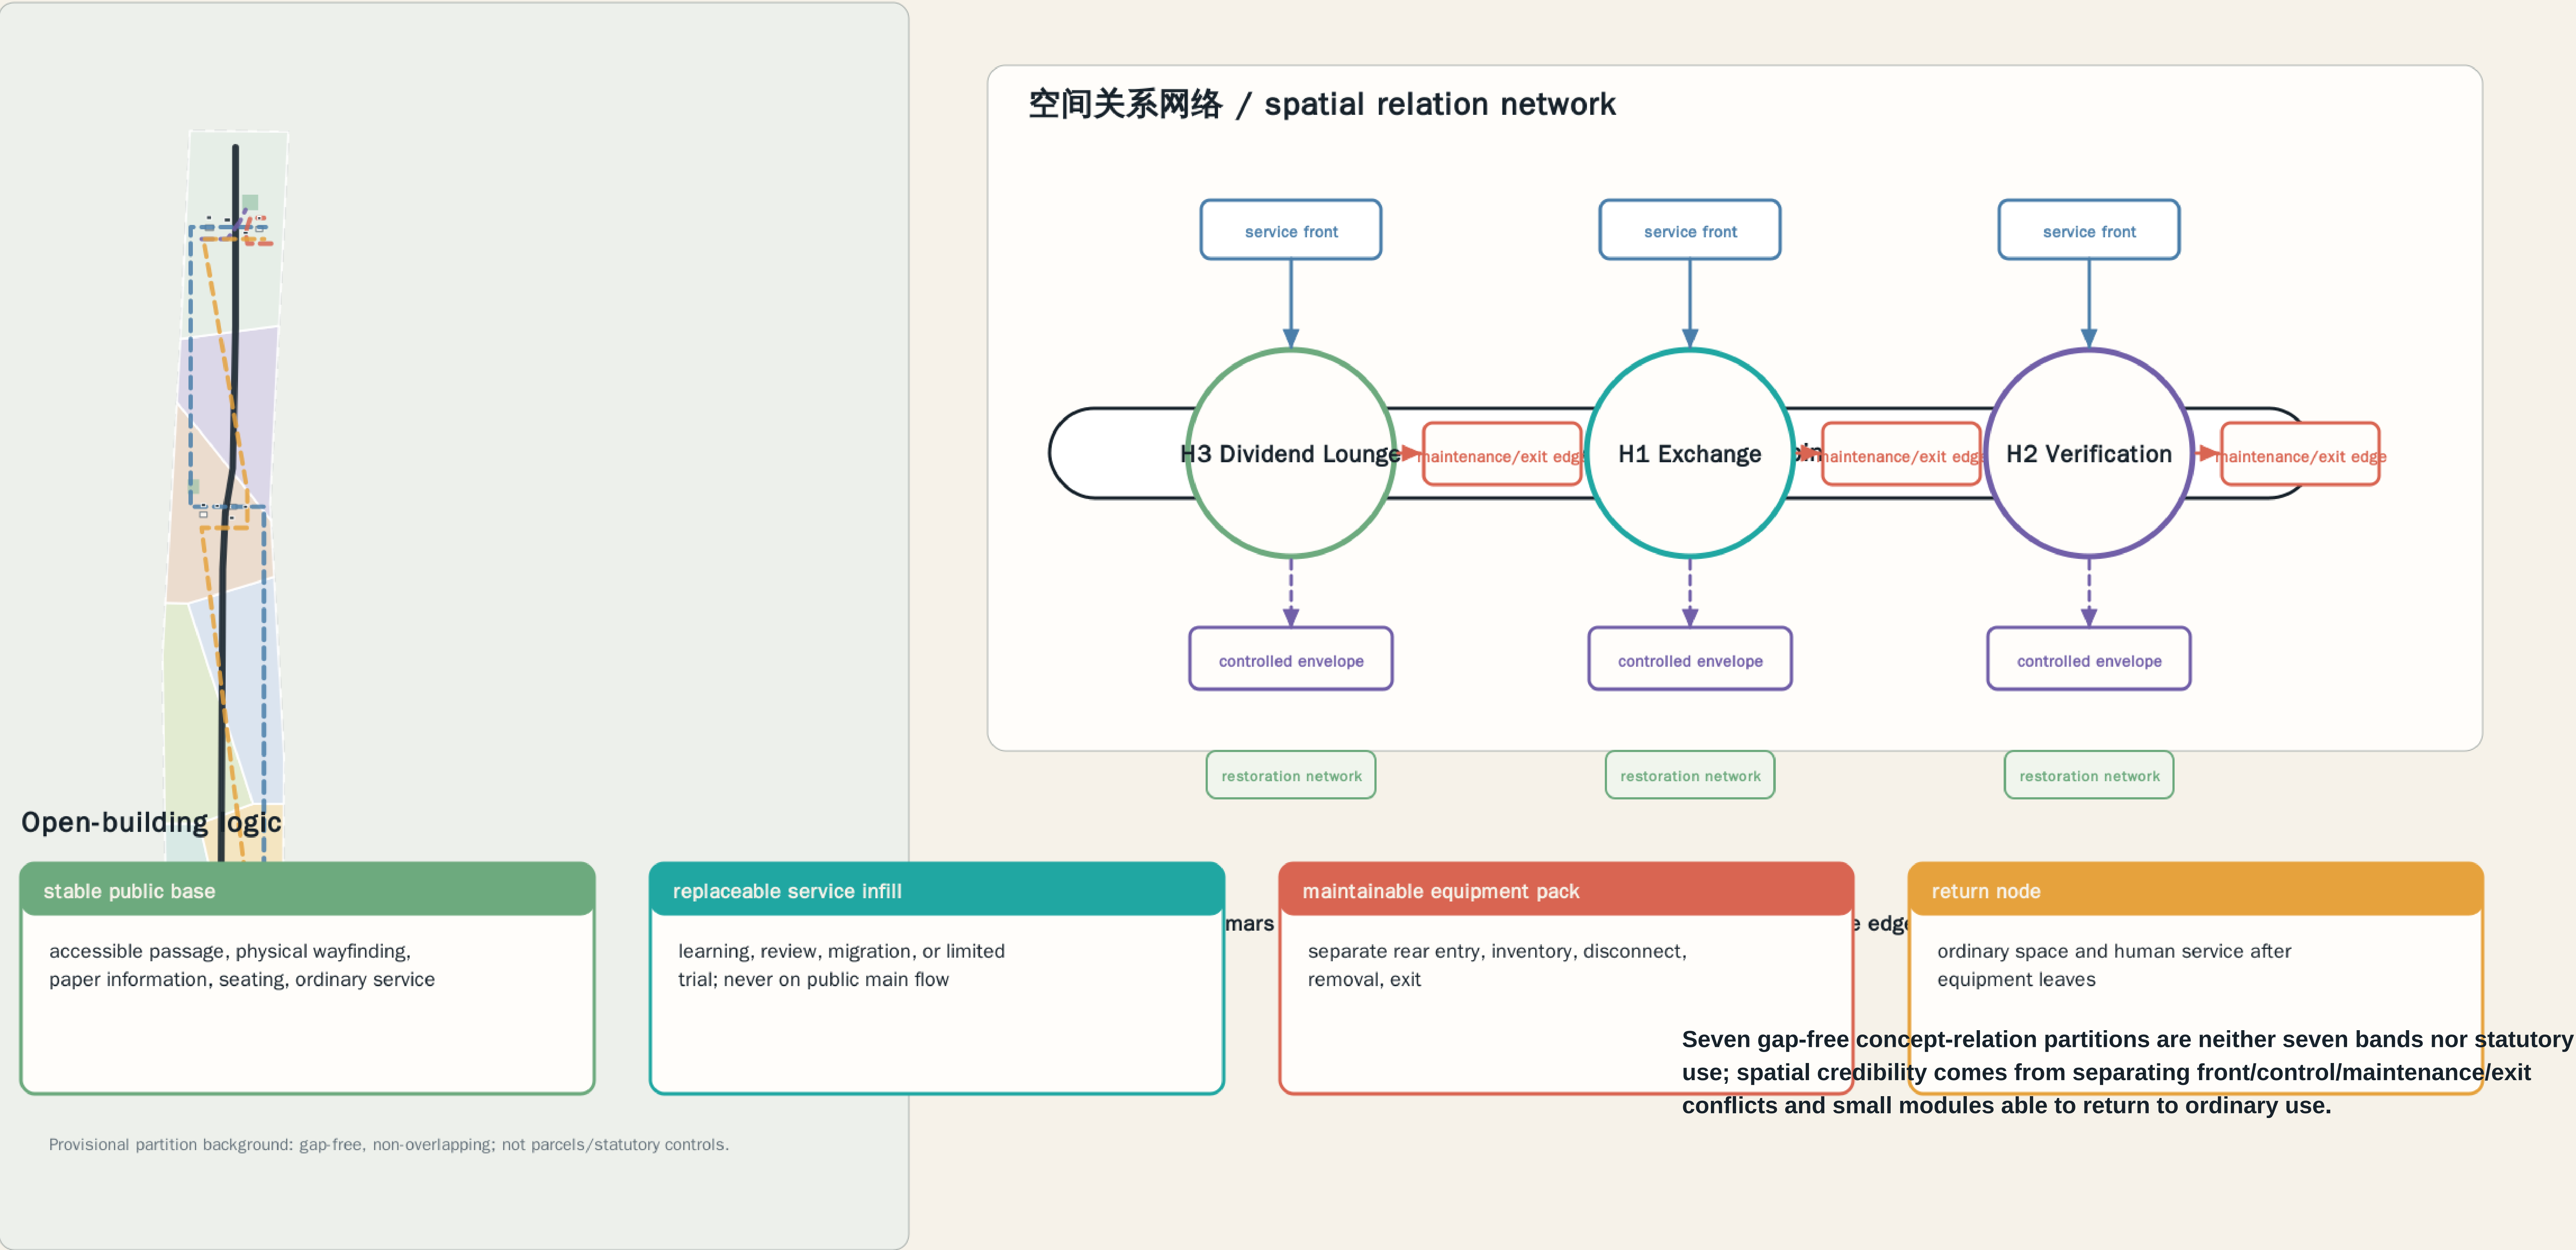

The full line indexes only public-accountability spine, I01–I06, H1/H2/H3, and return loops; local relations enlarge in key areas.

02 Spatial structure: spine, six segments, transverse handoff courts, and reversible modules

Seven conceptual uses are a gap-free topology background only; urban design arises from separating public front, controlled, maintenance, and restoration conflicts.

Provisional container: official_boundary=false · provisional_constraint · provisional_rough; design/topology only, not redline/existing-condition/approval evidence.

JINGZHANG OPEN COMPUTE COMMONS · v1.3 · Source: package EPSG:4548 topology recalculation and precedent translation; statutory use/intensity/setback/ownership unknown.

return node

B03 Three key areas: V / X / D spatial prototypes

Zhongzhiyuan verifies/maintains/handles logistics; AI Origin exchanges/learns/reviews; Dazhongsi serves/evaluates/keeps human fallback.

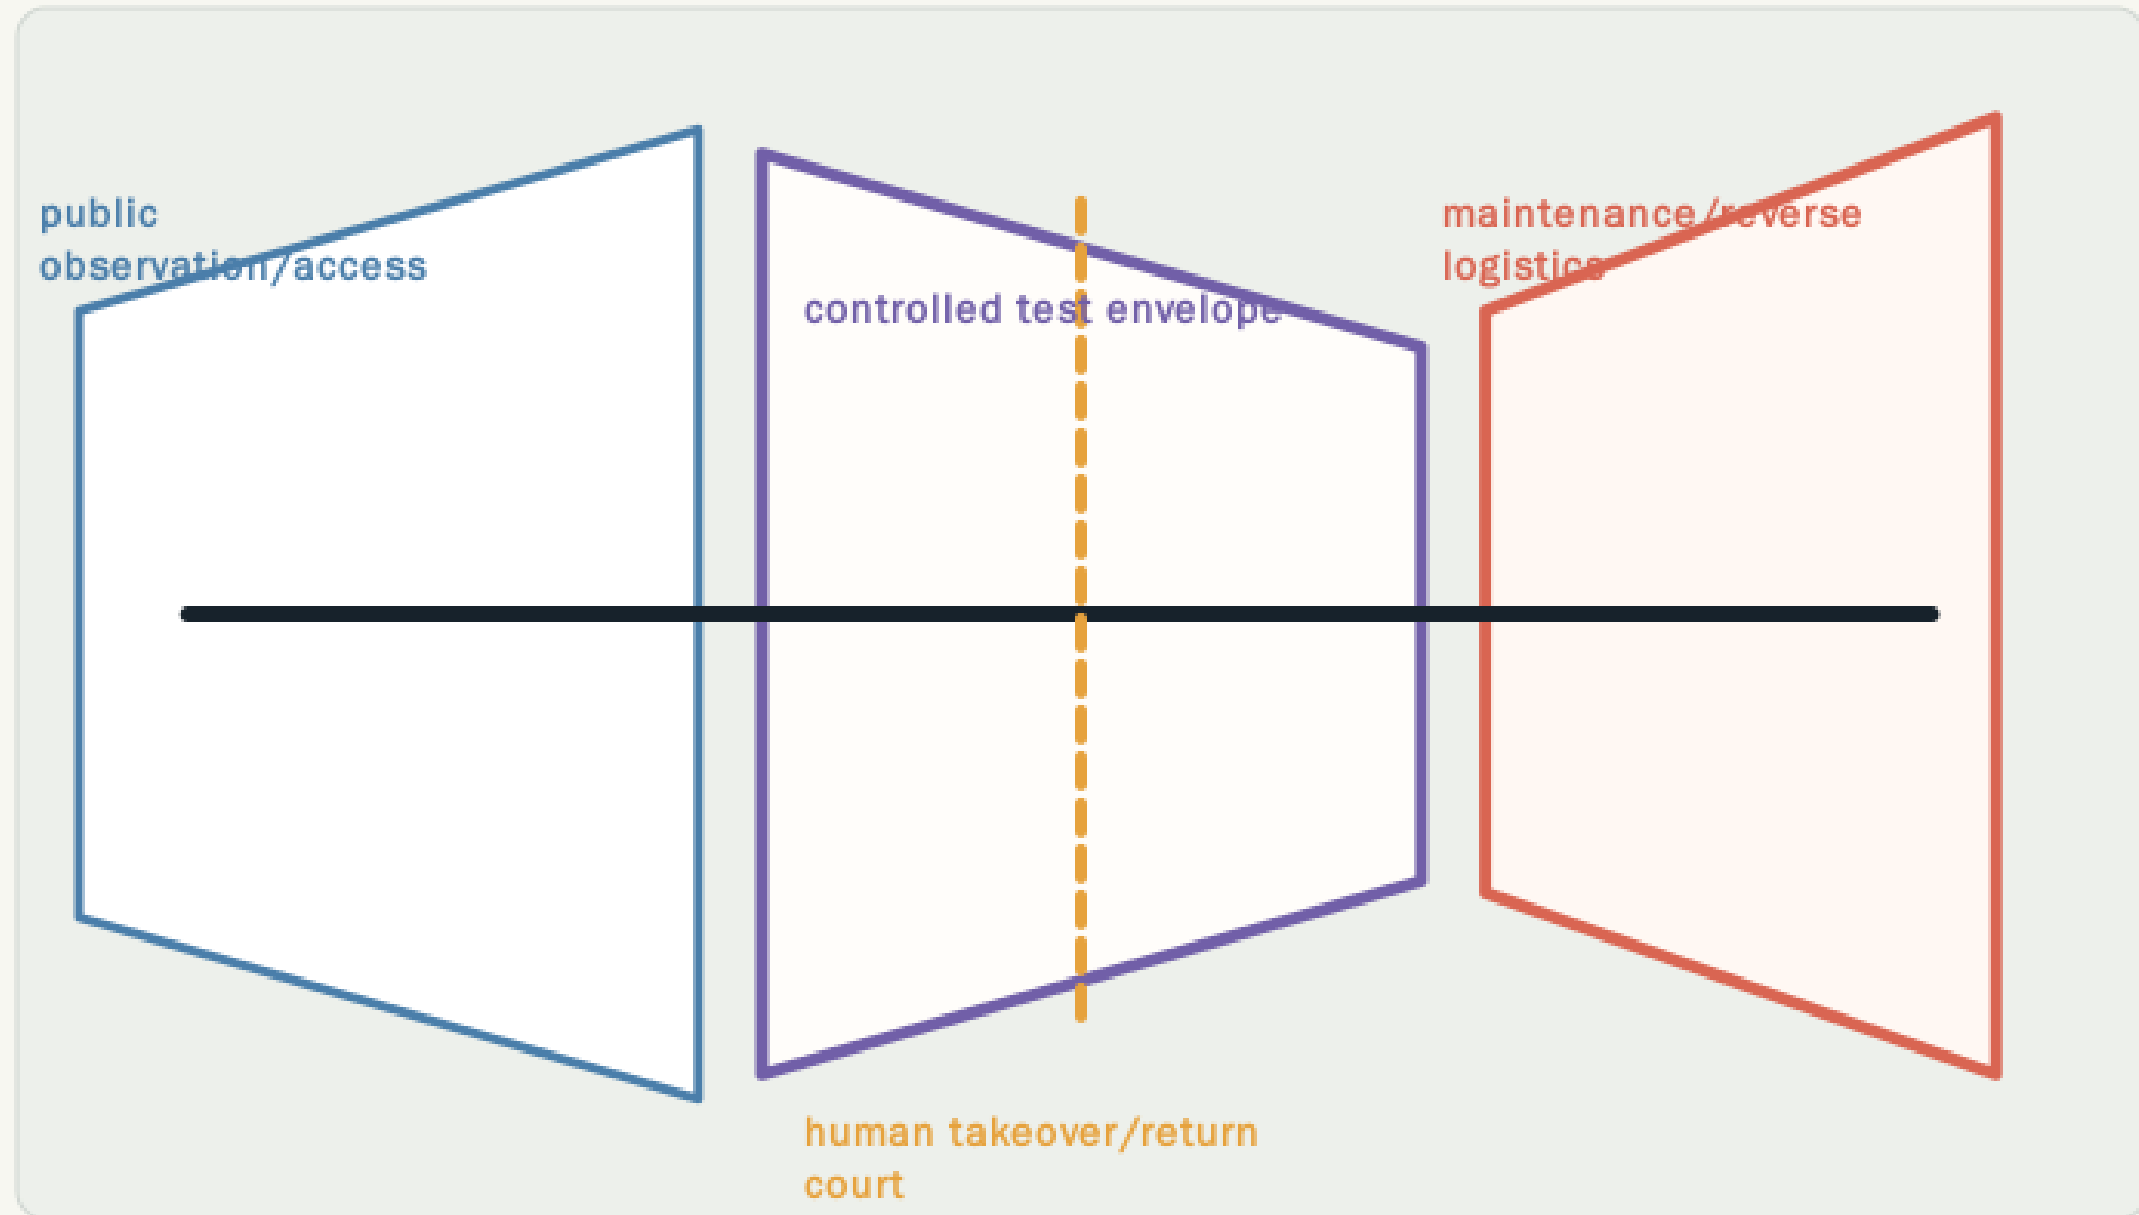

03 Three key areas: three spatial prototypes, not one module turned three ways

Each shows a directional plan, typical section, public-controlled-maintenance-restoration relation, and four states inside a provisional container.

Zhongzhiyuan | V: verify / maintain / observe

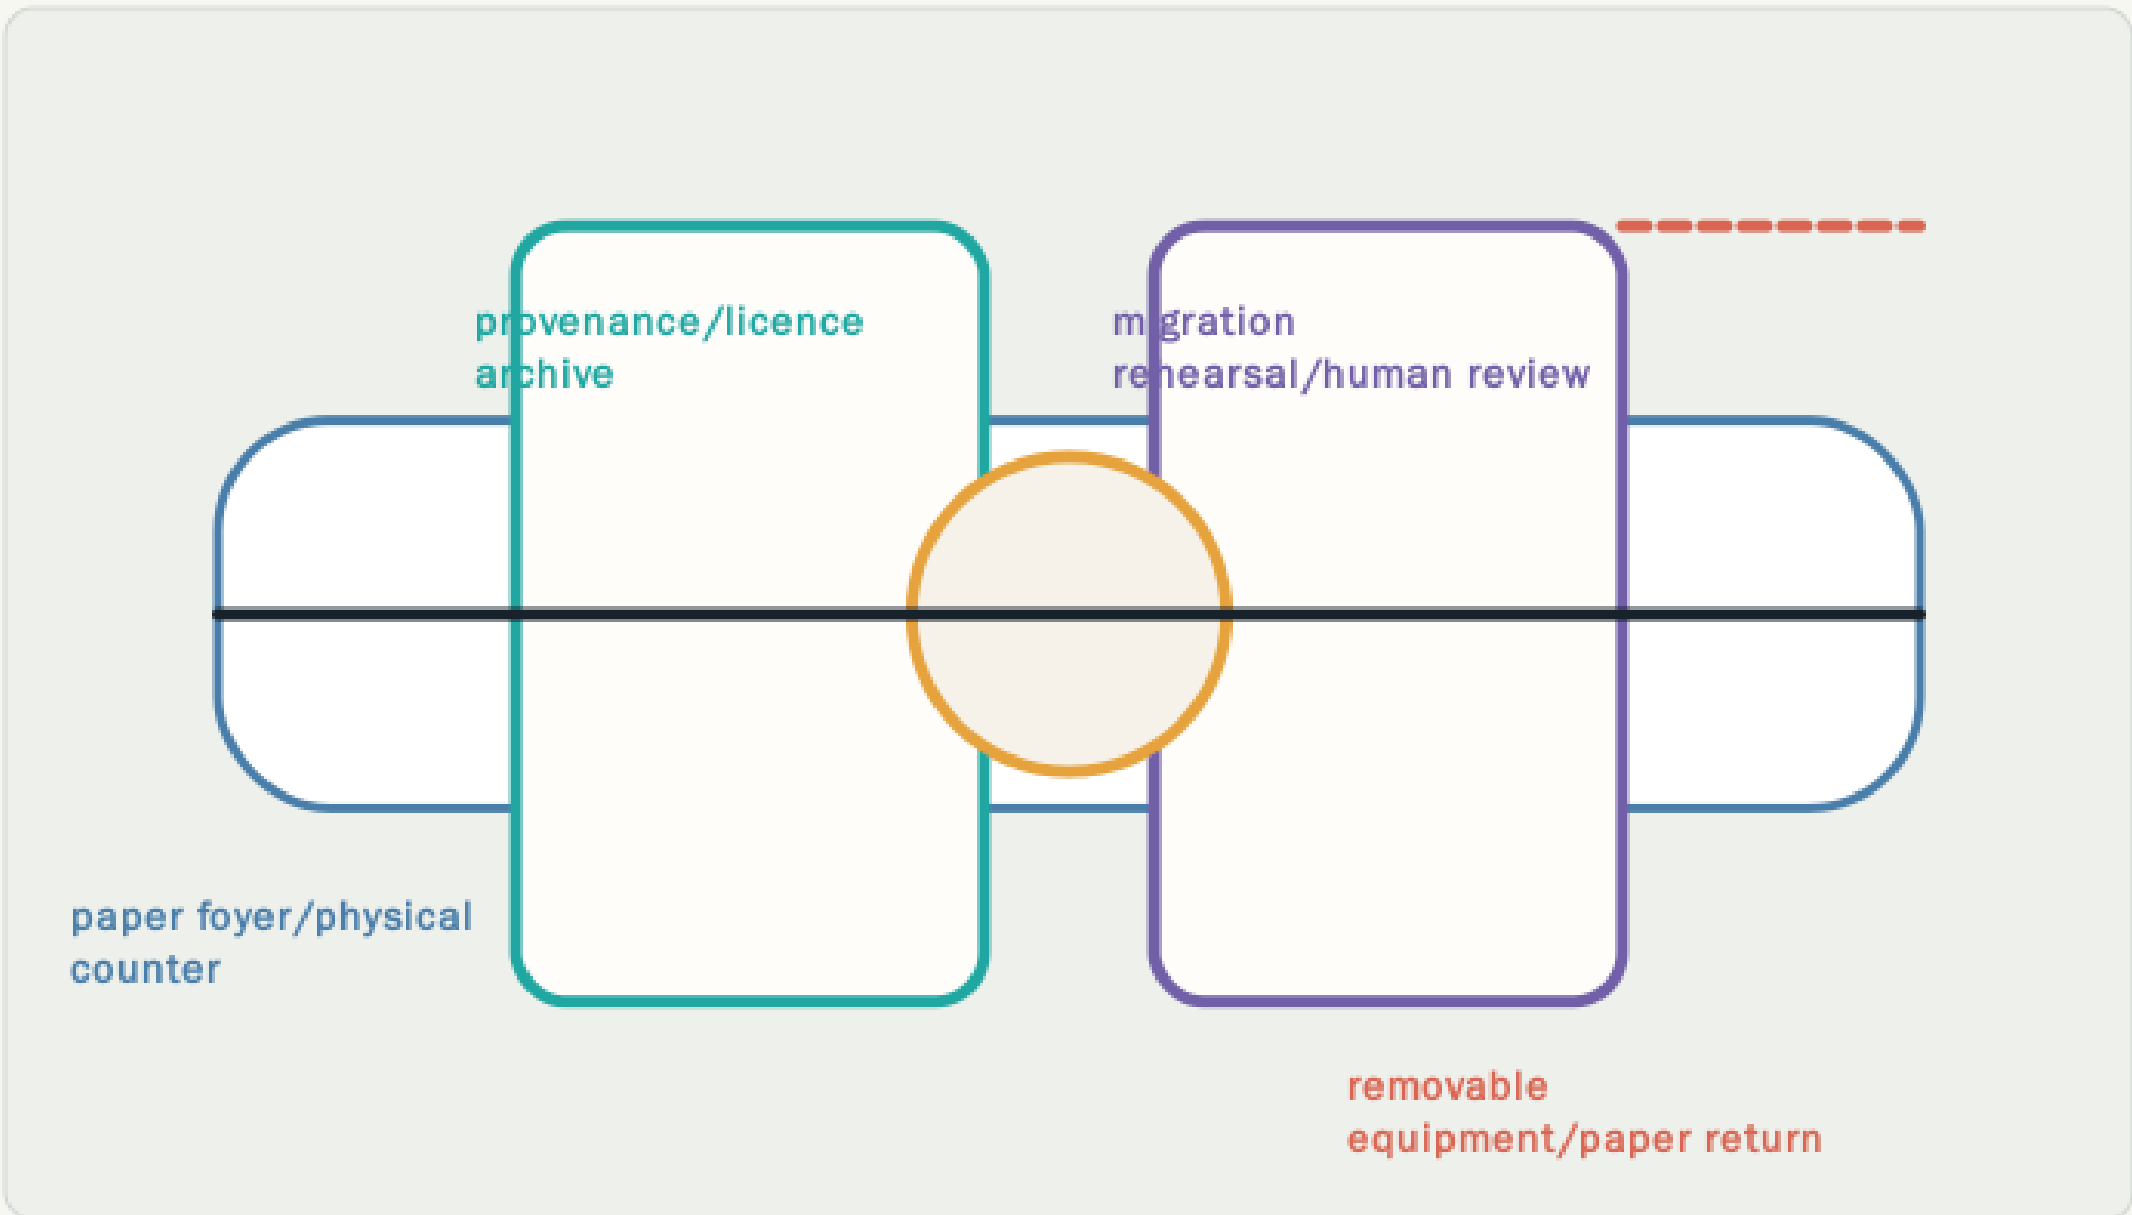

public observation → controlled verification → buffer/maintenance → return court

42–70 m × 32–46 m concept module-group envelope; directional relation only, not engineering/existing condition.

Beijing AI Origin | X: exchange / learn / review

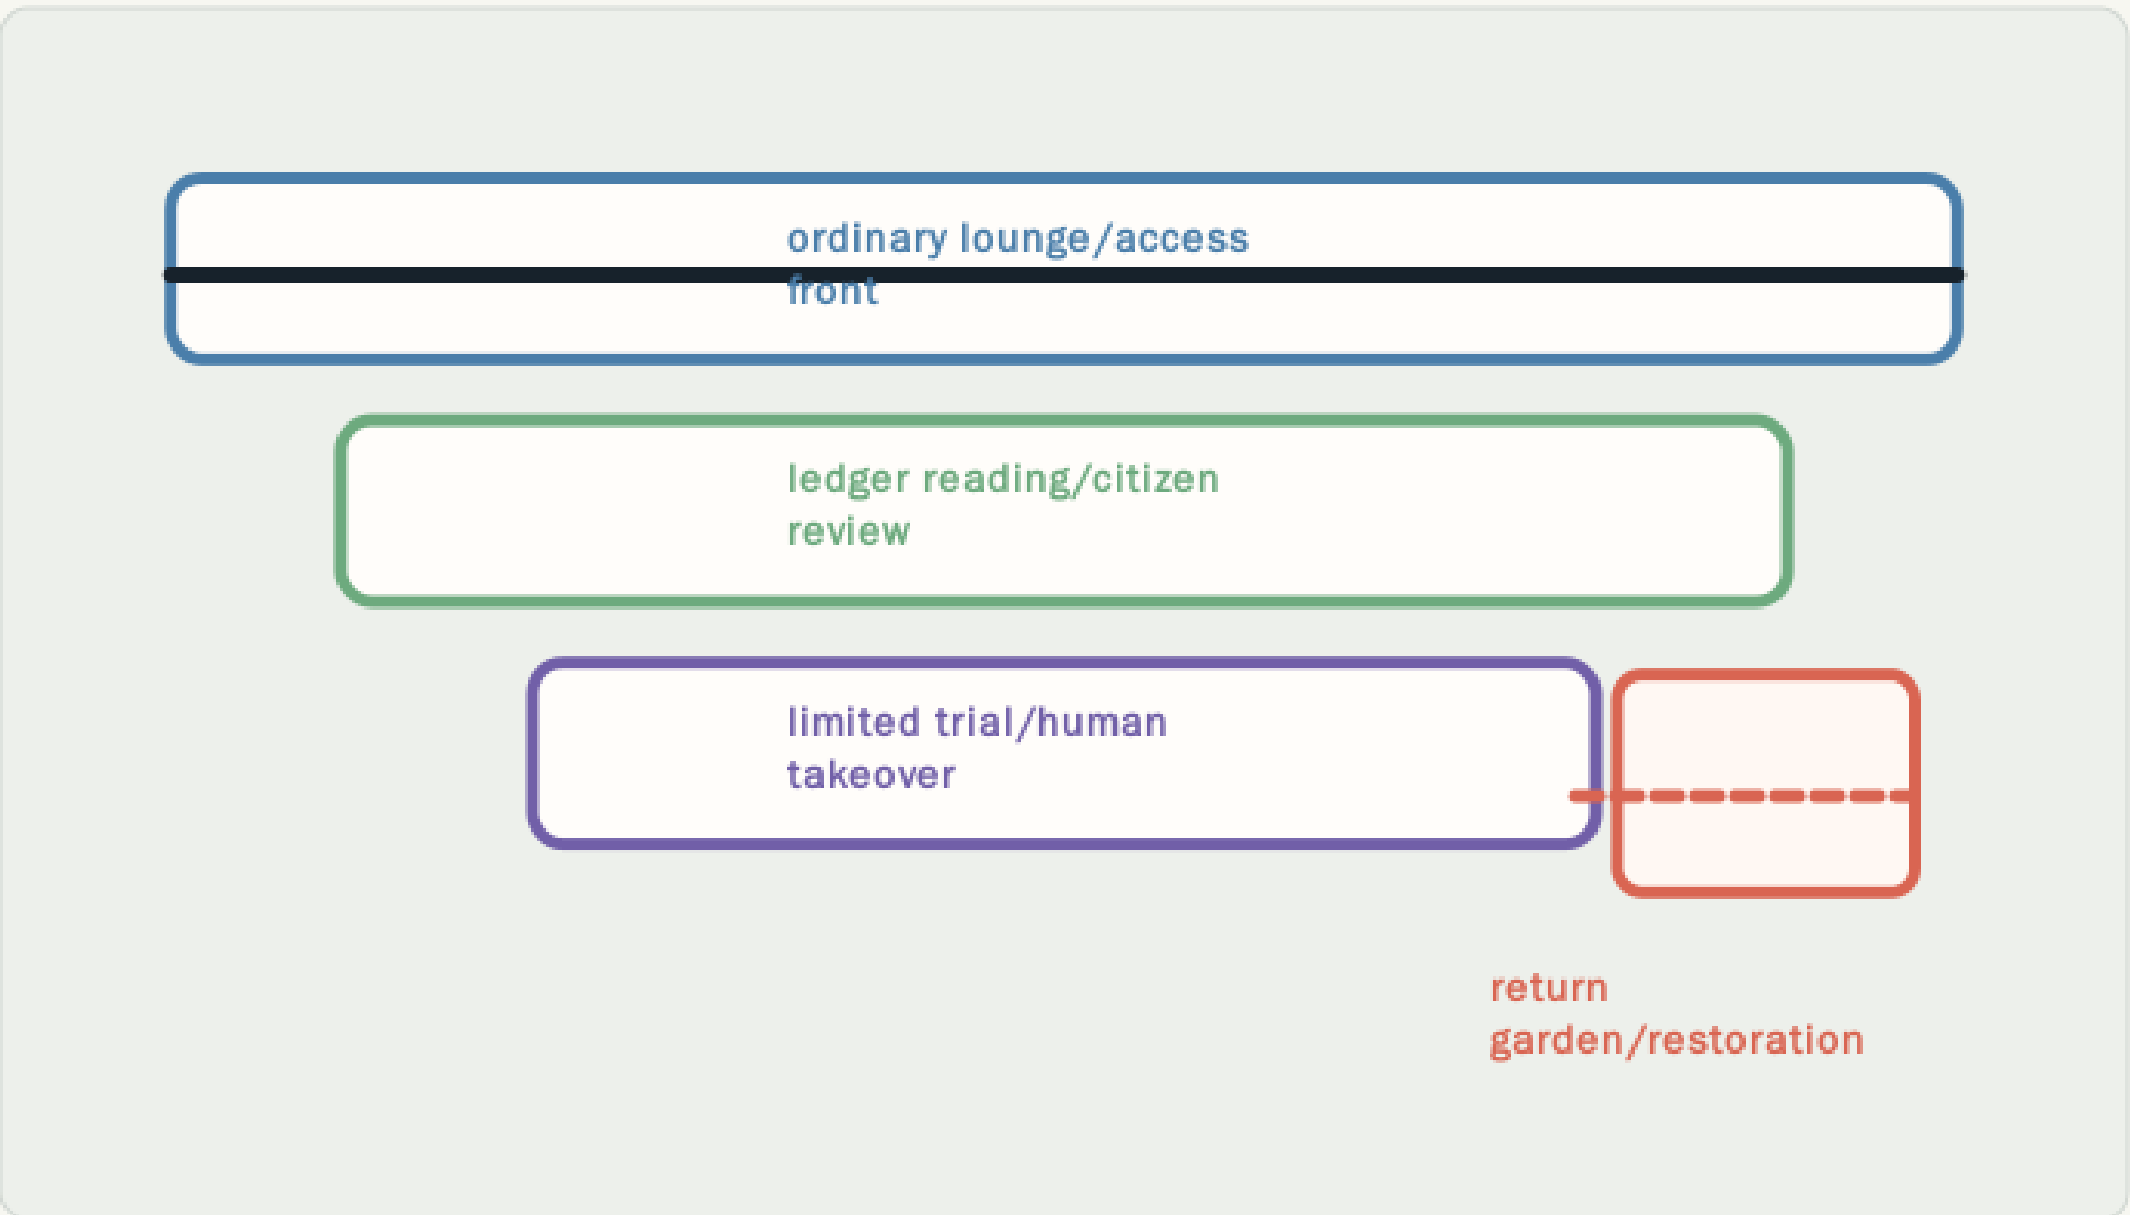

paper foyer → provenance archive → migration/review → workshop

42–56 m × 34–38 m concept module-group envelope; directional relation only, not engineering/existing condition.

Dazhongsi | D: serve / evaluate / return

physical front → ledger/review → limited trial → return garden

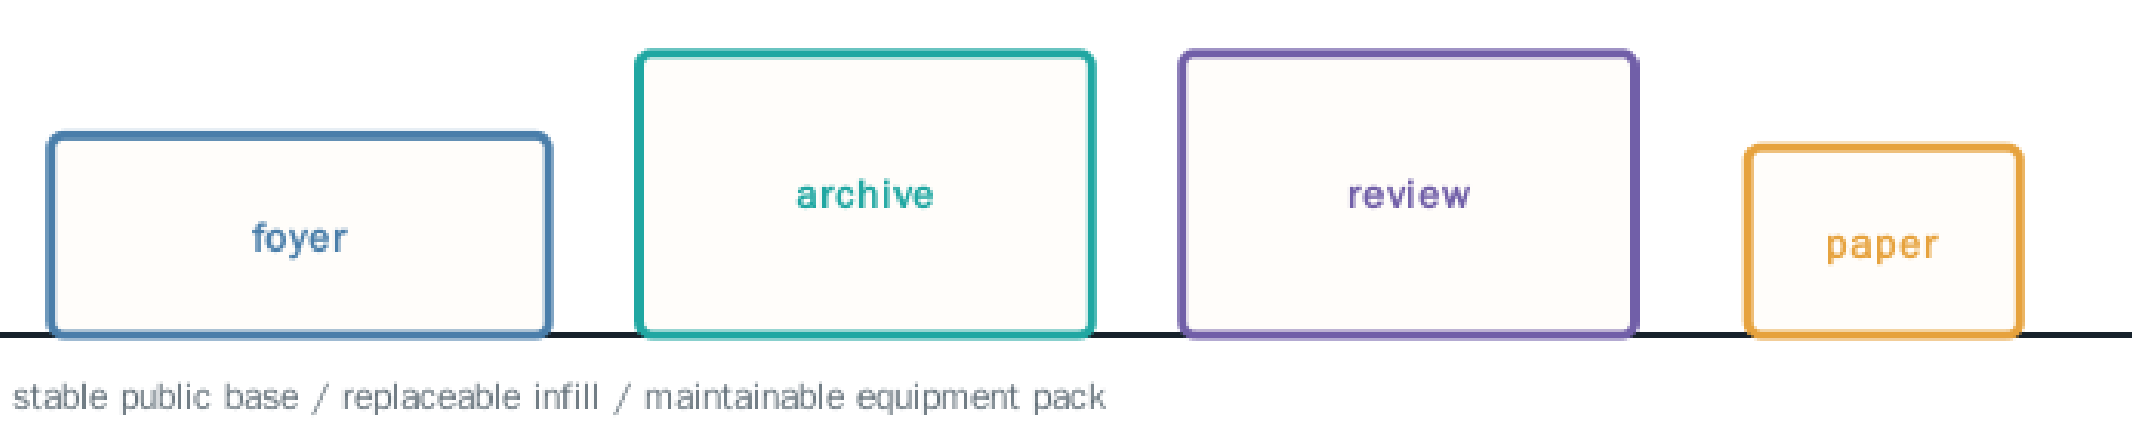

36–50 m × 28–36 m concept module-group envelope; directional relation only, not engineering/existing condition.

Typical-section / spatial-sequence

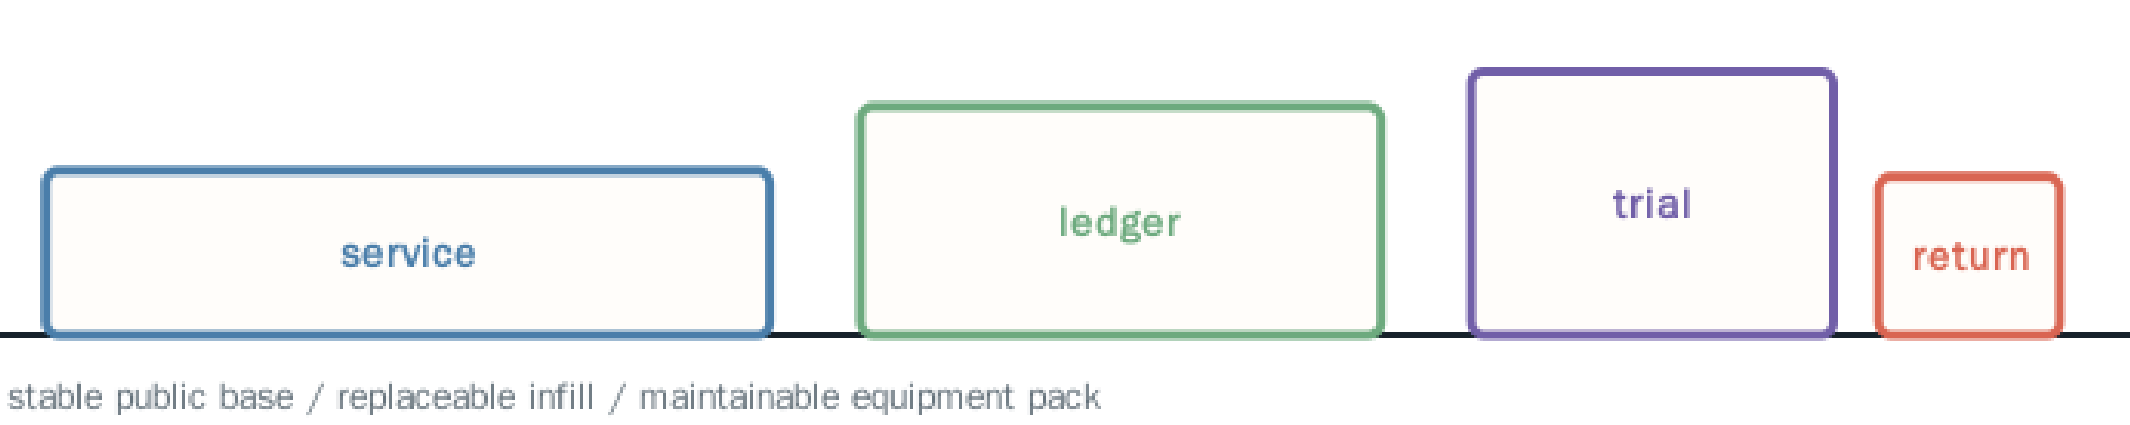

stable public base / replaceable infill / maintainable equipment pack

Typical-section / spatial-sequence

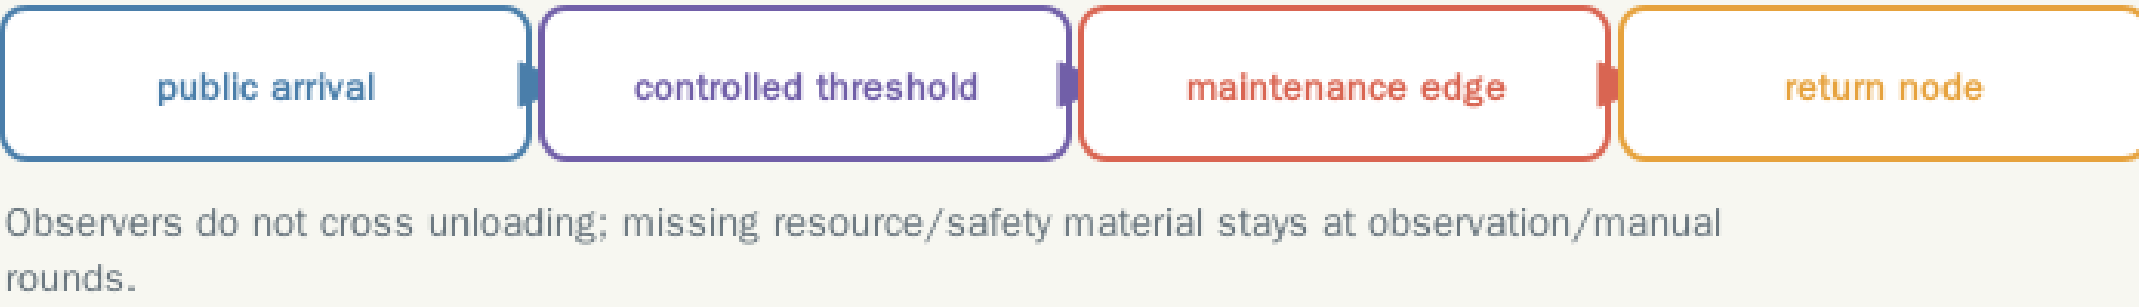

stable public base / replaceable infill / maintainable equipment pack

public-controlled-maintenance-restoration relation

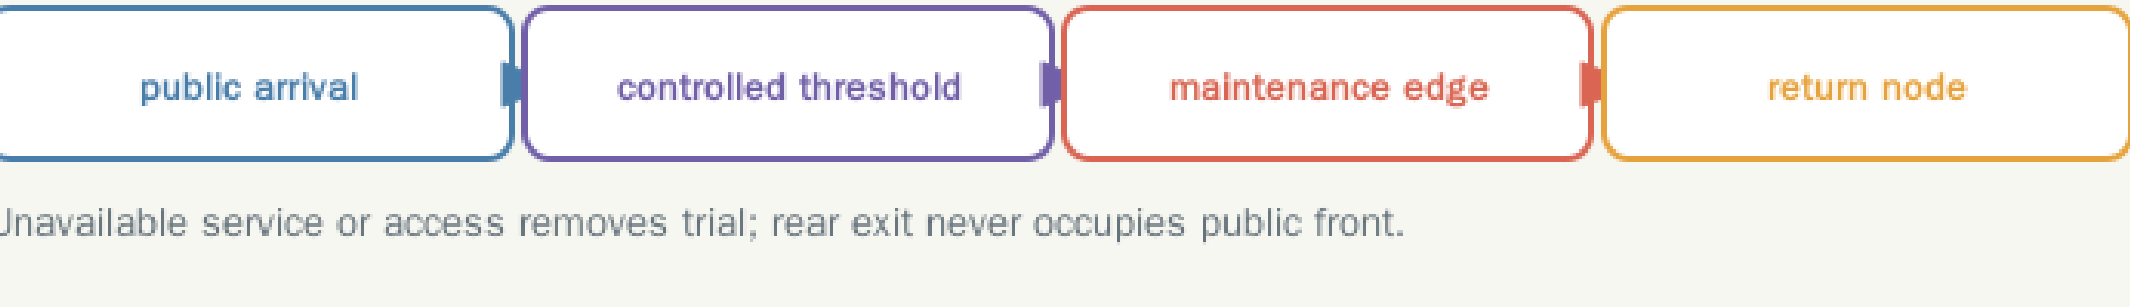

Observers do not cross unloading; missing resource/safety material stays at observation/manual rounds.

public-controlled-maintenance-restoration relation

Missing provenance, export, or human path cannot cross foyer; return to paper/face-to-face.

public-controlled-maintenance-restoration relation

Unavailable service or access removes trial; rear exit never occupies public front.

Four states: ordinary / controlled test or review / paused / exit and restore

Key-area positions and boundaries are provisional containers; no existing road, station, building, rail, property, or engineering scale is shown.

Four states: ordinary / controlled test or review / paused / exit and restore

Four states: ordinary / controlled test or review / paused / exit and restore

Provisional container: official_boundary=false · provisional_constraint · provisional_rough; design/topology only, not redline/existing-condition/approval evidence.

Zhongzhiyuan | V: verify / maintain / observe

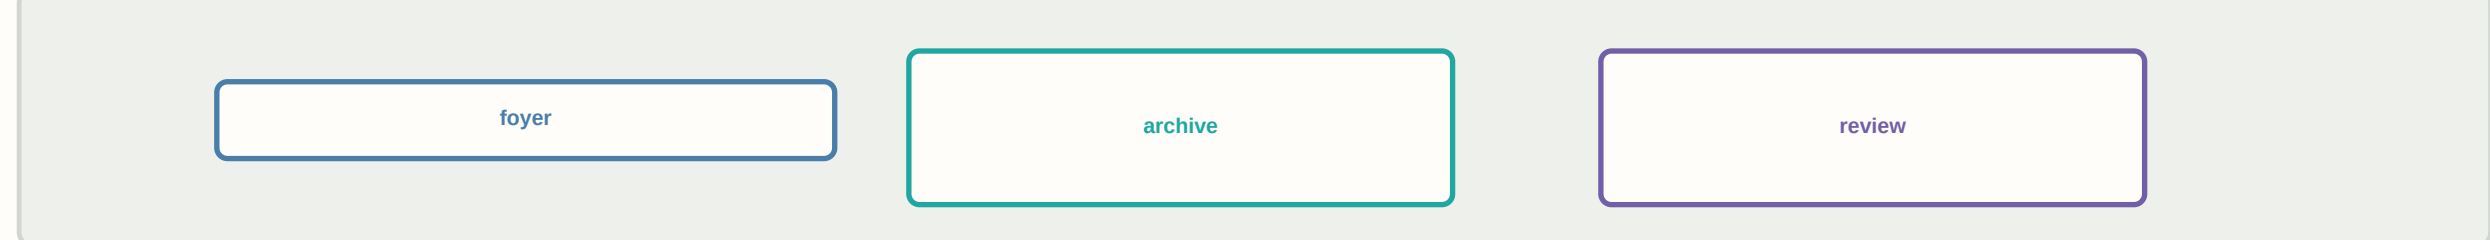

public observation → controlled verification → buffer/maintenance → return court

42–70 m × 32–46 m concept module-group envelope; conceptual relation

Beijing AI Origin | X: exchange / learn / review

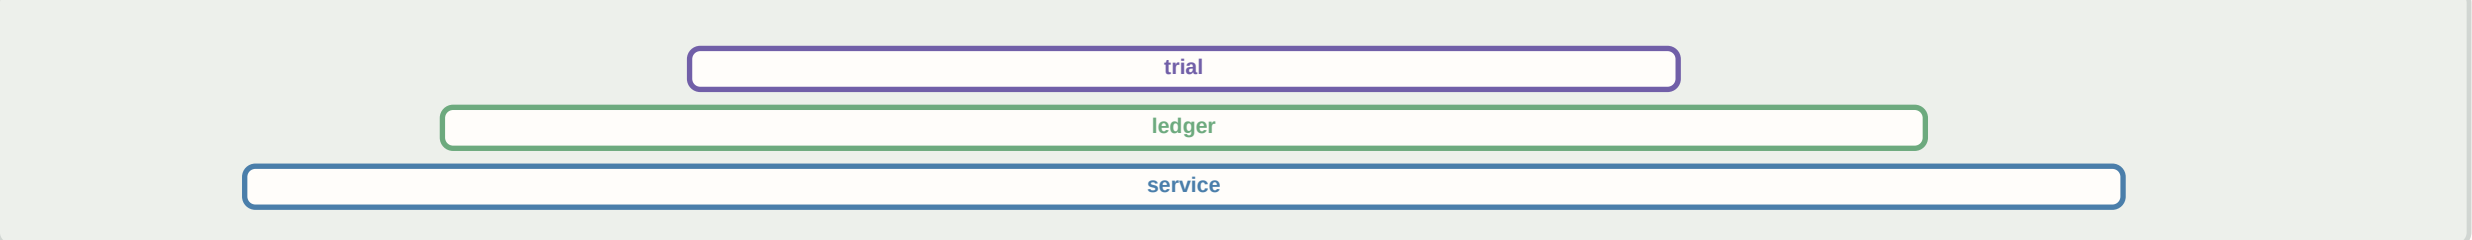

paper foyer → provenance archive → migration/review → workshop

42–56 m × 34–38 m concept module-group envelope; conceptual relation

Dazhongsi | D: serve / evaluate / return

physical front → ledger/review → limited trial → return garden

36–50 m × 28–36 m concept module-group envelope; conceptual relation

B04 Evidence and exit: public value cannot leave ordinary service behind

Geometry-derived, operational pending, statutory unknown are separate; missing evidence refuses, pauses, and returns ordinary service/space.

05 Metrics and evidence: geometry-derived, operational pending, and statutory unknown cannot substitute for each other

The joint service passport organizes space, service, resource, and exit through four evidence fields, five decision rights, and three handoffs.

Geometry-derived

provisional boundary area
11.41 km²

concept-module footprints
21.4k m²

concept public space
221.6k m²

five centrelines
30.4 km

six / three / three
I01–I06 / V-X-D / H1–H3

Operational pending

cross-stack migration: untested

resource ledger: unmeasured

exit restoration: undrilled

environmental benefit: not claimed

public evaluation: not occurred

Statutory/engineering unknown

FAR / height / density / green ratio

setback / redline / ownership / heritage extent

municipal / energy / cooling / heat recovery

investment / schedule / procurement / partners

accessibility and site-safety conditions

Joint four-contract passport: what is public, who keeps controlled evidence, who refuses a missing field

Open

interface, version, provenance, licence, export, replacement

Resource

boundary, point/instrument, method, coverage/gap, maintenance, stop

Public Dividend

physical service, access, human responsibility, feedback/challenge, no resident-data sale

Exit

degrade, migrate, disconnect, inventory/remove, ordinary service and space return

Brand and physical application: neutral plug-in mark, not a phone/account/identity gateway

passport header

ledger desk

physical wayfinding

pause sign

return node

Key unknowns: official polygon, control lines, existing roads/rail/buildings/stations, rights, heritage extent, municipal/energy capacity, cooling/heat recovery, investment/schedule/procurement/partners, on-site access/safety. No unmeasured environmental or operating result is claimed.

geometry-derived	operational pending	statutory unknown
public summary	controlled evidence	missing/refusal
