

A Care-and-Mending Urban Design for the Centennial Jing-Zhang AI Innovation Belt

总体设计结构：一脊三核两翼四廊道 · One Spine, Three Cores, Two Wings, Four Corridors

A century ago, the Beijing–Zhangjiakou Railway repaired the confidence of the Chinese people in building on their own; a century later, this belt mends the urban everyday torn apart by speed — the value of AI is not to be faster, but to care.

Mend · repair

stitches the spatial fracture

from building a railway to mending a city: Green Spine + four corridors

Empower · enable

stitches the social fracture

Zhongguancun Technology Services Wing exports IP and capital

Nurture · care

stitches the digital fracture

Nurture Station care network in the Origin Community

Develop · grow

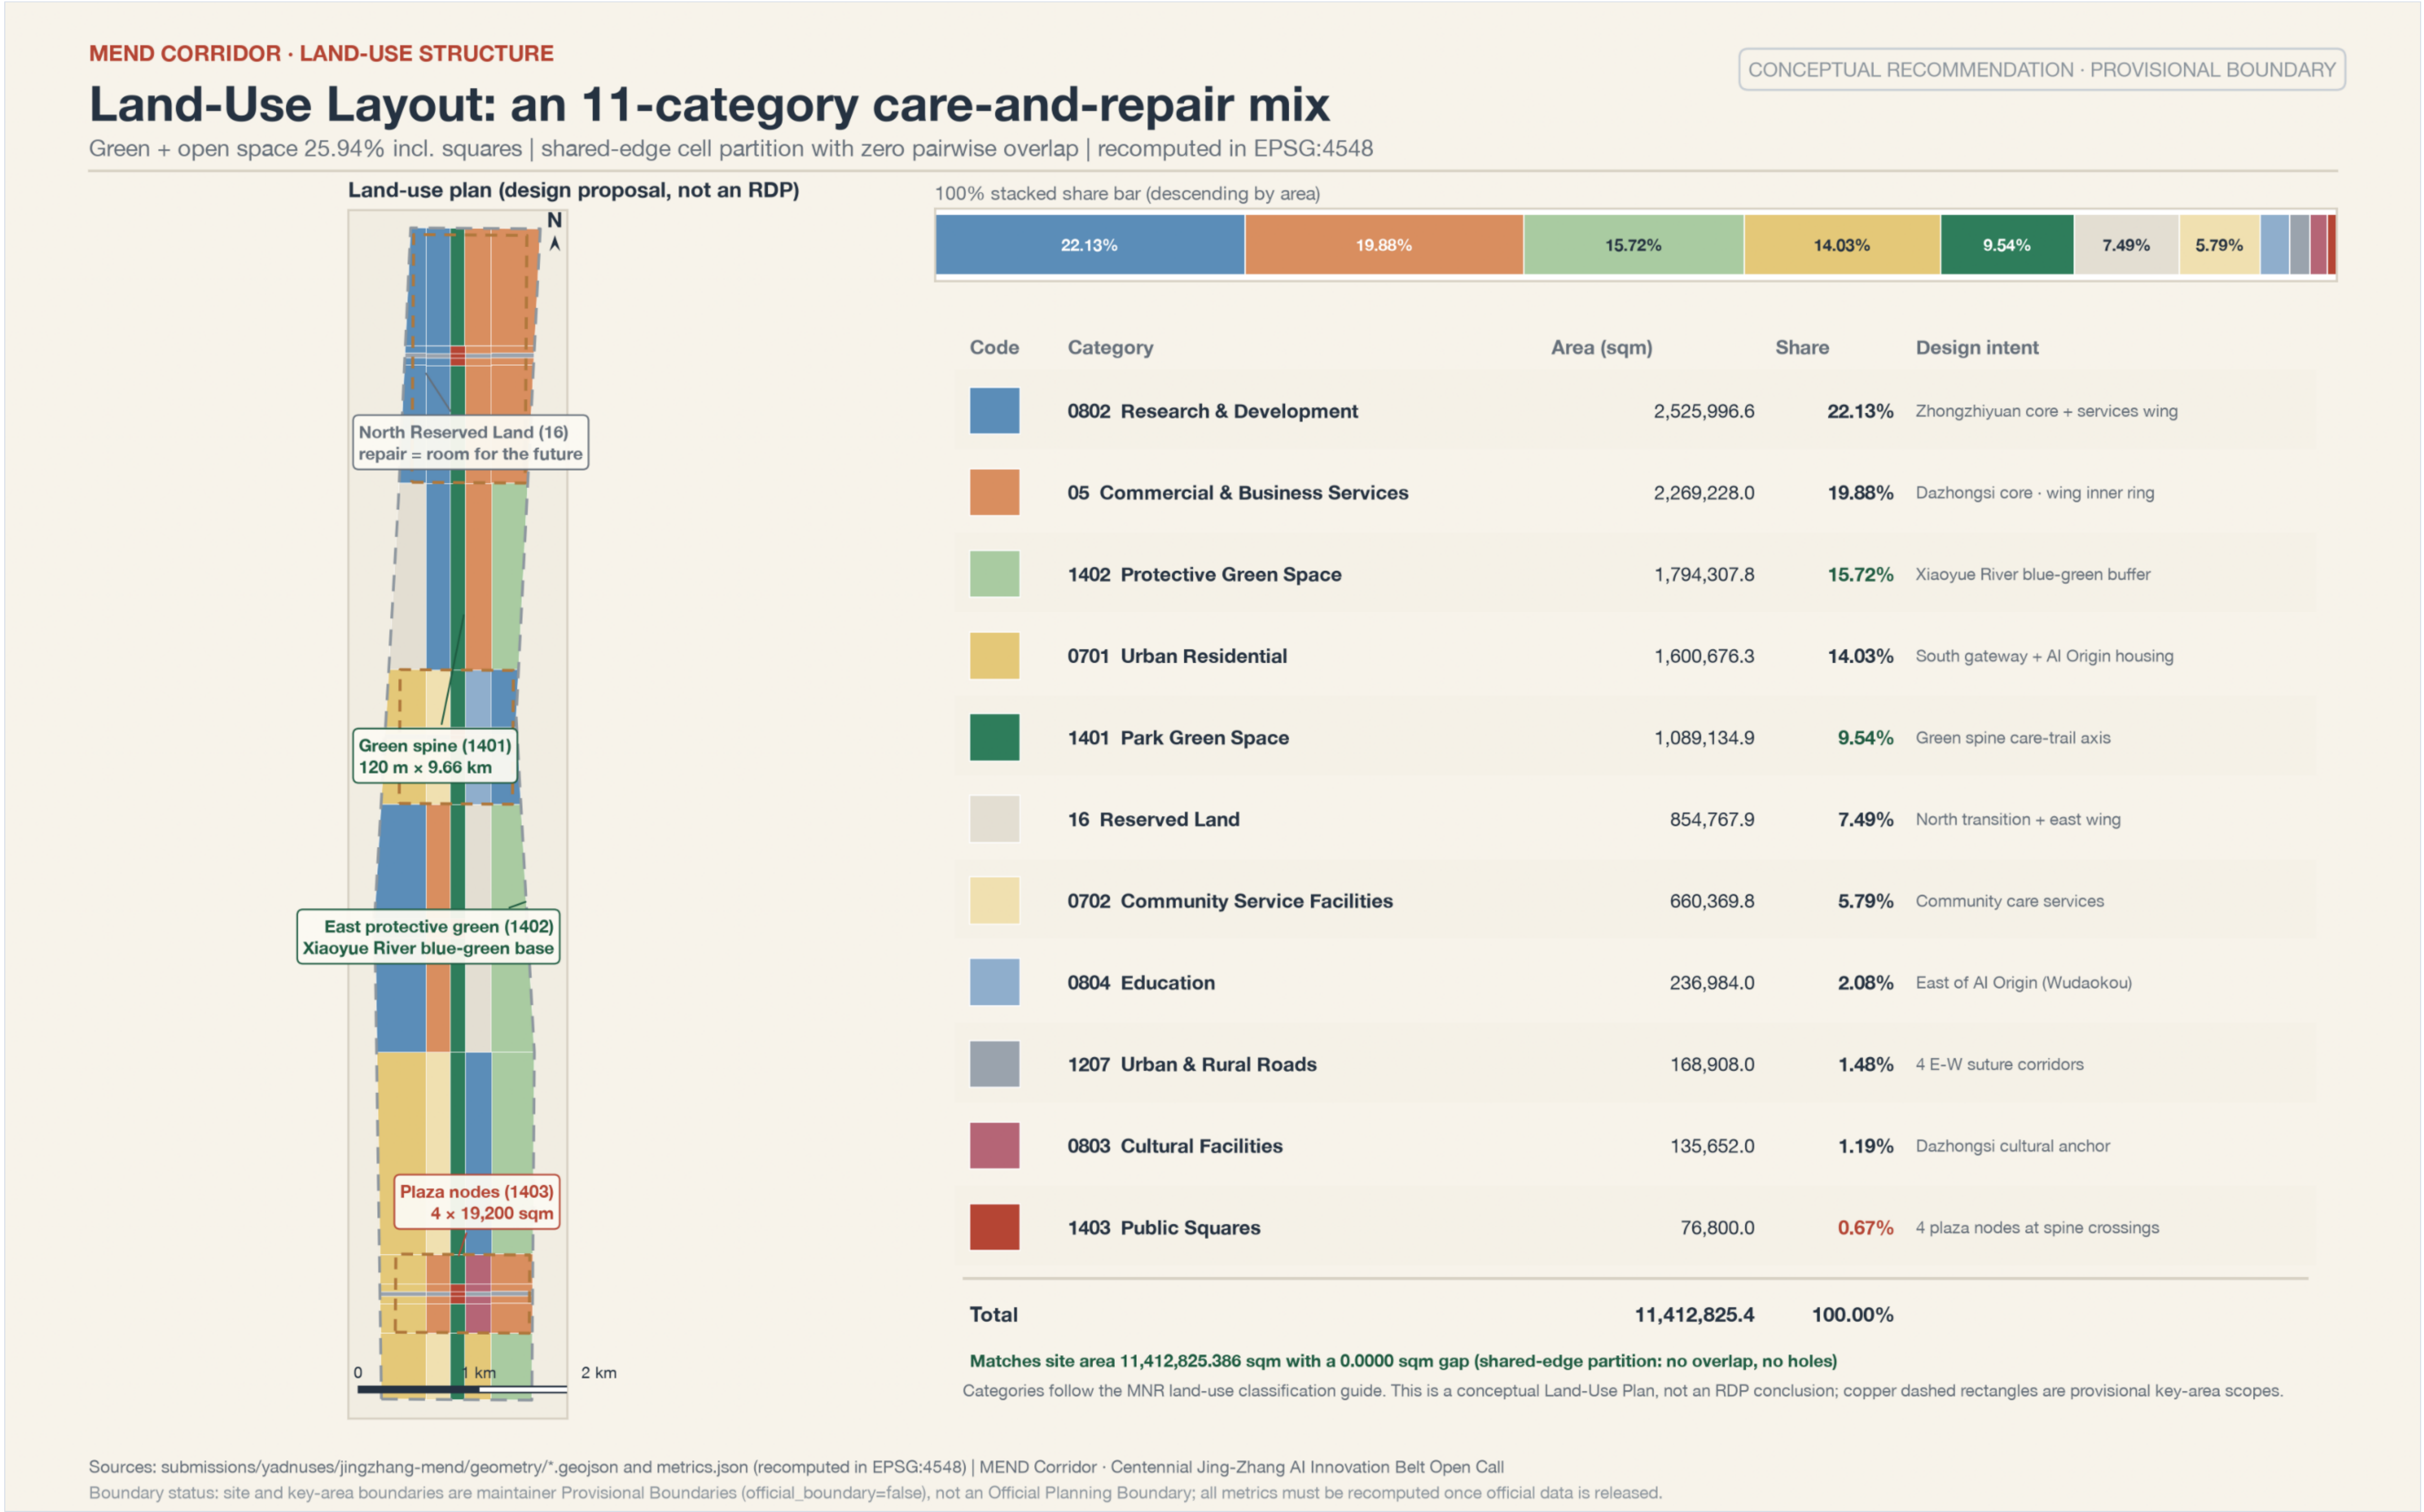

care technology becomes industry

Dazhongsi AI-native consumption and content formats

用地与城市更新 · Land Use and Urban Renewal

11 类用地由统一网格切割生成，总面积与总体范围边界差为 0；更新框架：保留织补为主、廊道缝合优先、留白预留弹性。

Green space

2,883,442.715 m<sup>2</sup>

green ratio 0.252649

Public space

2,960,242.715 m<sup>2</sup>

share 0.259379

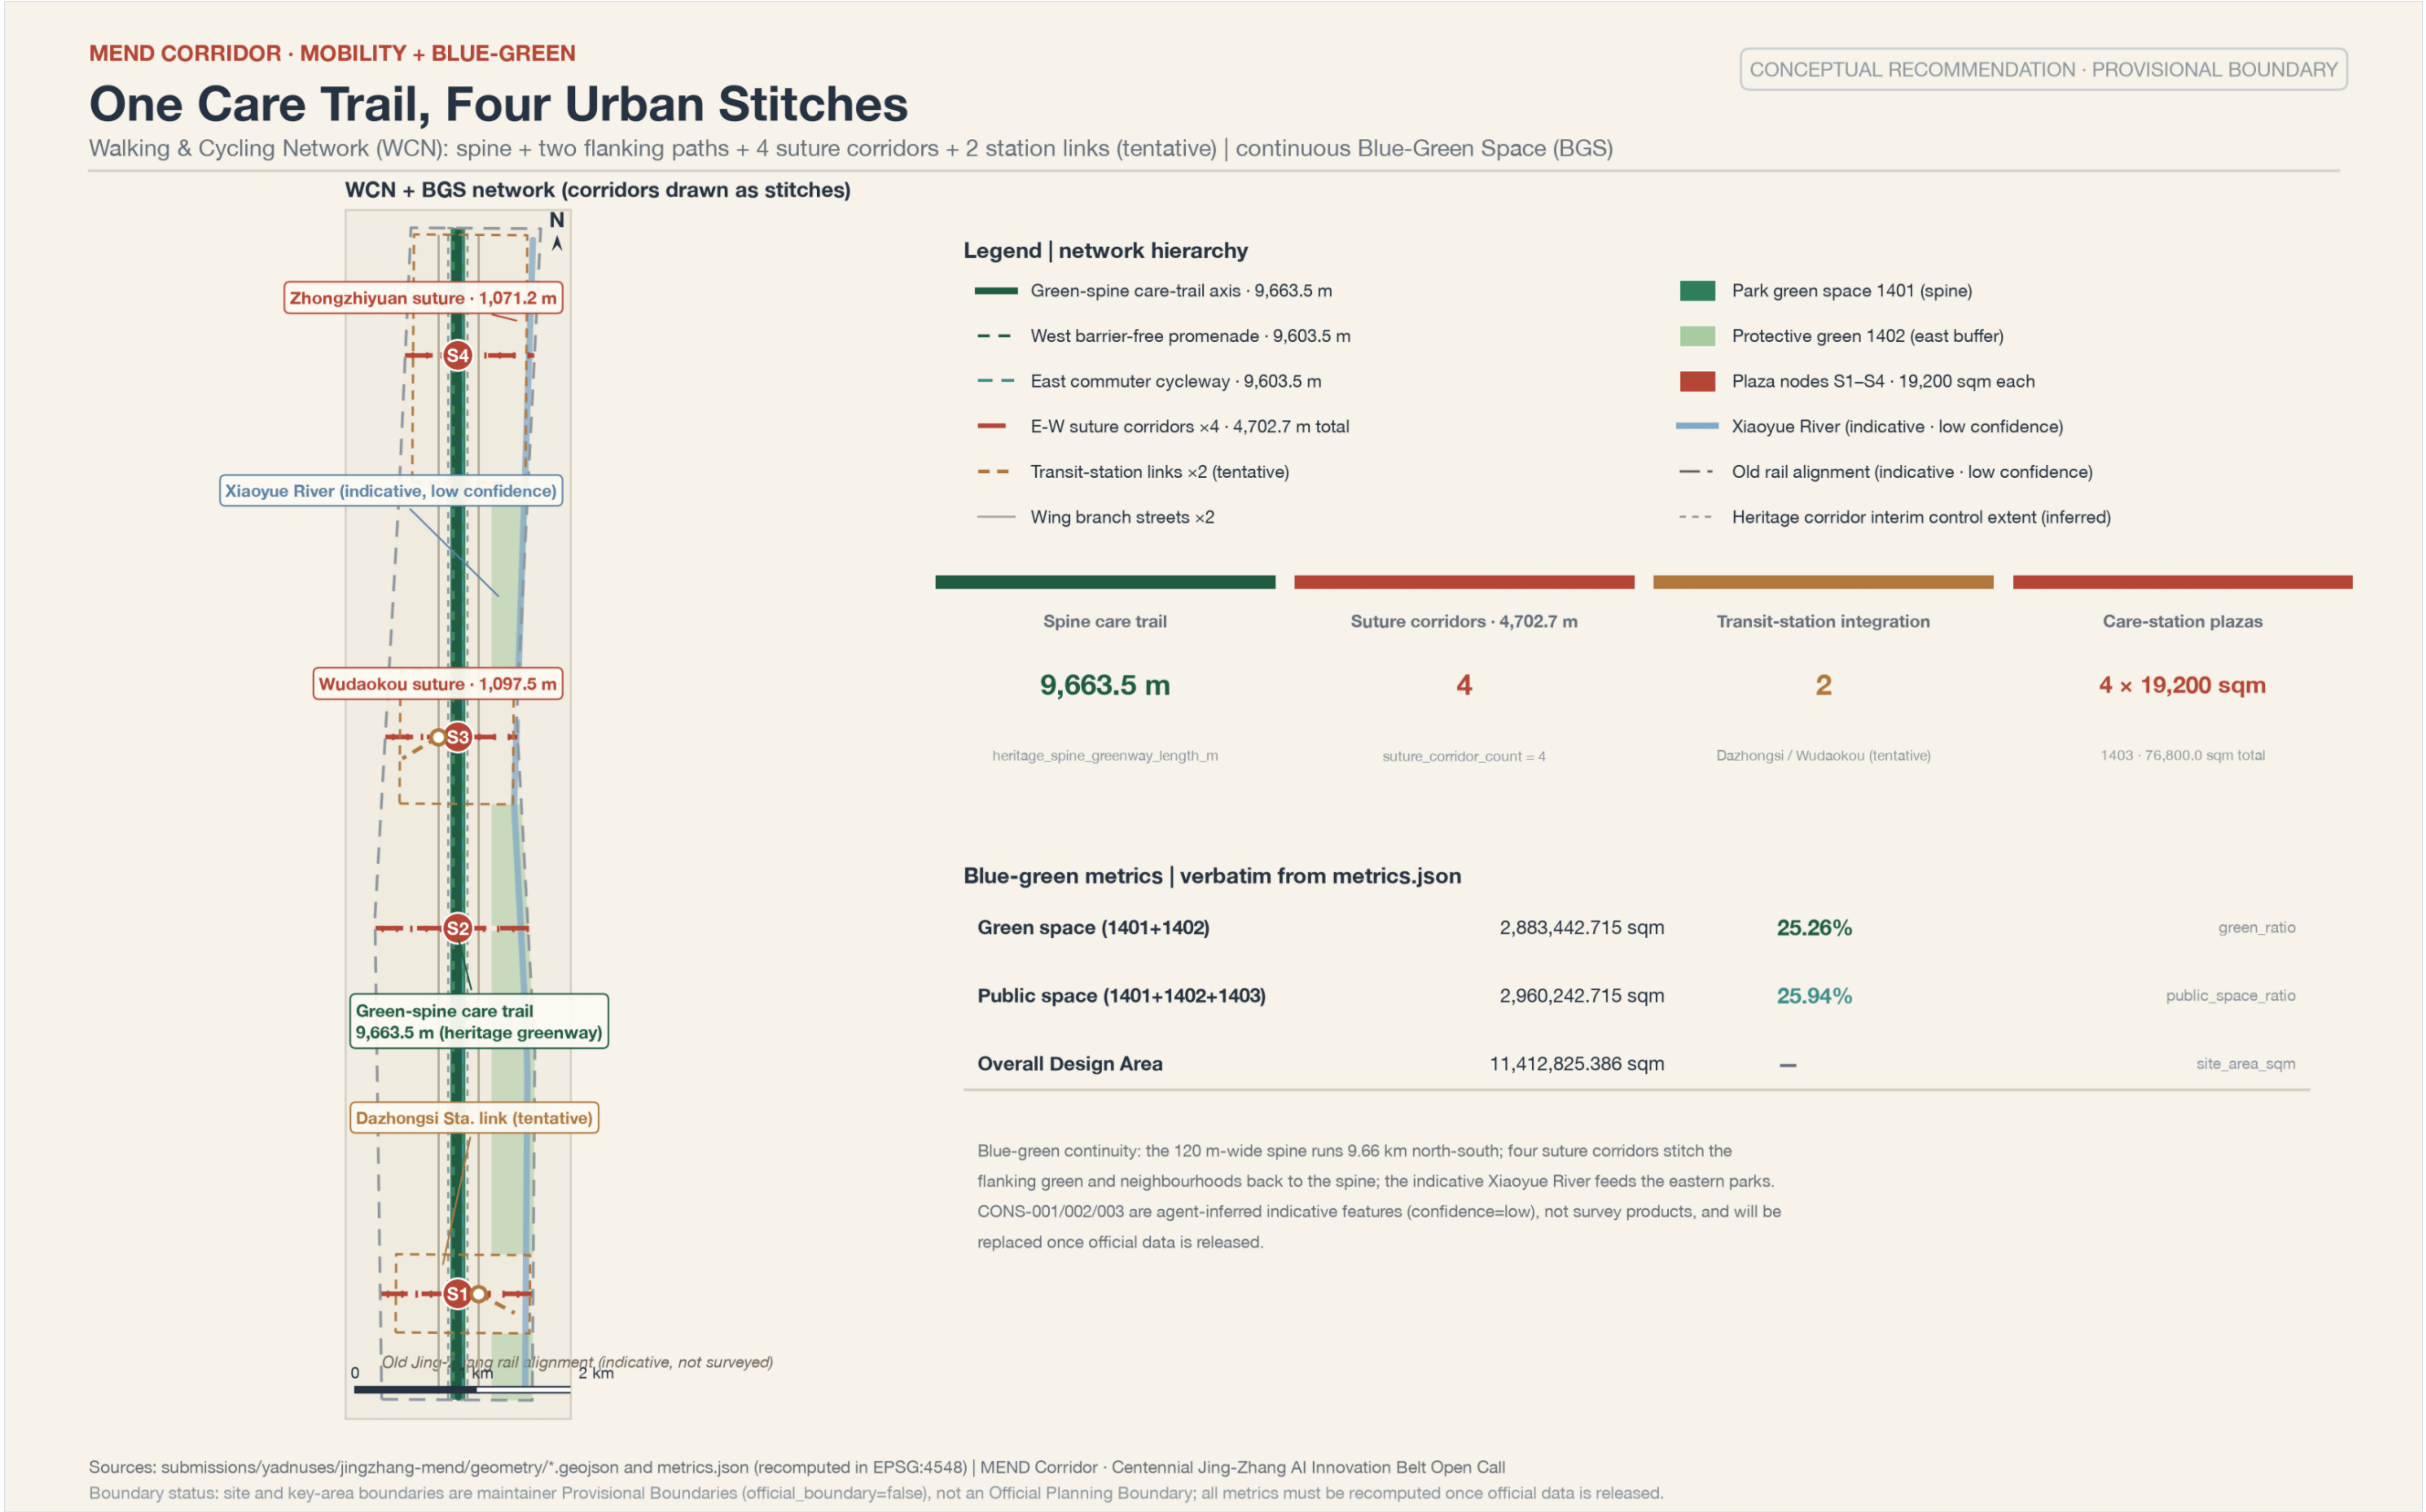

更新框架 · Renewal framework

Urban-renewal overall framework: retention and darning first, corridor stitching prioritized, white space reserved for flexibility. 1401+1402 form a green base of 2,883,442.715 m<sup>2</sup>; 1207+1403 form the stitching system; code-16 reserved land carries phasing flexibility. Research + commercial together carry about 42% of land, bearing the "1+X+1" industrial system.

交通、轨道、慢行与市政支撑 · Transport, Rail, Slow Mobility, Municipal

第一命题是「缝合」：4 条东西向缝合廊道修复铁路慢性割裂，慢行骨架为「一脊两带」。

Stitching corridors

4 east–west stitching corridors, each about 40 m wide; widened into 120×160 m plaza nodes (19,200 sqm each) at Green Spine crossings

Slow–mobility skeleton "one spine, two belts"

Green Spine greenway main axis recalculated at 9,663.5 m; west walking belt and east cycling belt run alongside

Rail connections (concept)

two tentative connection lines toward Dazhongsi Station and Wudaokou Station; station integration organized around Wudaokou and Qinghua East Road West Crossing

Slow–mobility breakpoints

cross–ring–road and cross–railway breakpoints get conceptual countermeasures only (overpass vs at–grade comparison); no engineering alignments (GAP–ROAD–001)

Municipal & new infrastructure

以京张绿脊为骨架的蓝绿系统 + 3+1 朝圣地标 + 「修路→修车→修城→修身」文化叙事。

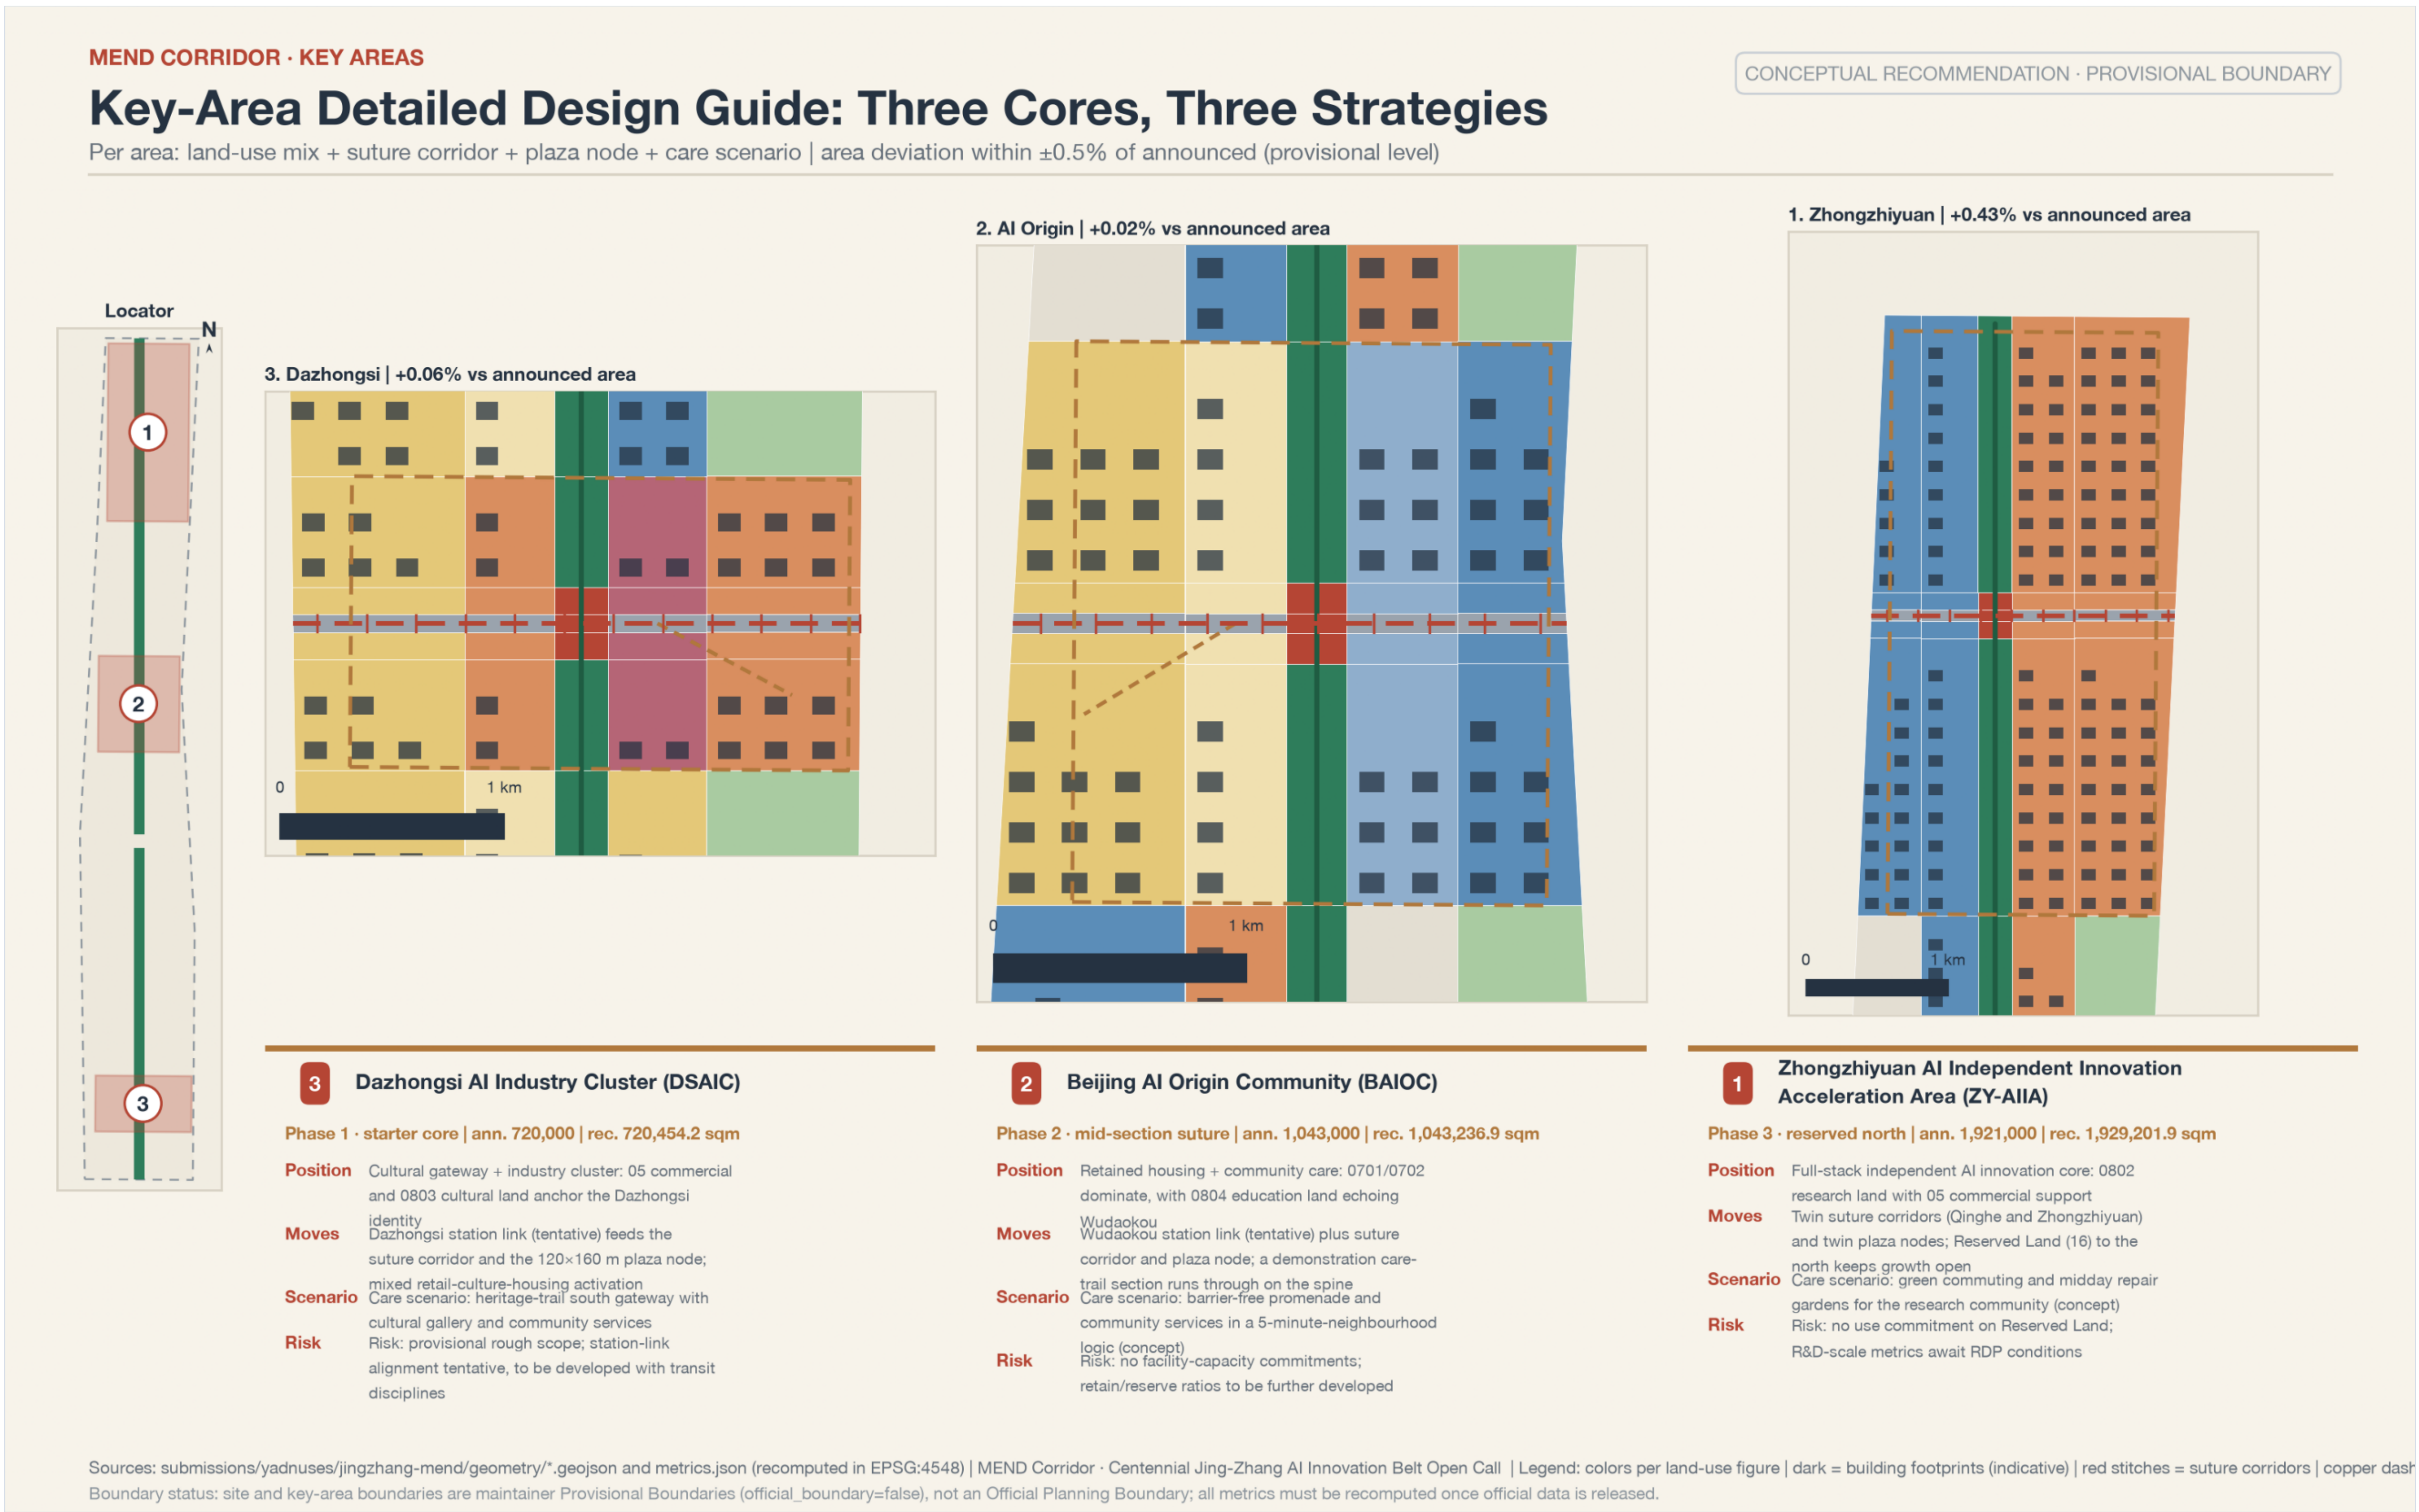

AI pilgrimage landmarks (3+1, all conceptual proposals)

Jingzhang MEND Corridor · 相护京张

三处重点区域详细设计 · Detailed Design of the Three Key Areas

众智园（硬核）→ AI 原点社区（温度）→ 大钟寺（界面）；provisional 矩形边界下的方向性详细设计。

| 锚点区                                                                  | 定位与空间动作                                                                                                                                                                                                                                   | 第一空间动作                                                | 主场景                                                      | 实施风险                                               |
|----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|----------------------------------------------------------|----------------------------------------------------|
| Zhongzhiyuan AI Independent Innovation Acceleration Area<br>Mend Lab | Garden-type full-stack innovation neighborhood; 0802 research land as main body; low-carbon corridor on the Qinghe frontage; model testing, standards workshops, safety-governance exhibits. ~1,921,000 m <sup>2</sup> (+0.43%)           | low-carbon innovation corridor on the Qinghe frontage | independent model testing, standards-governance exhibits | Fifth Ring Road external transport to be verified  |
| Beijing AI Origin Community<br>Nurture Station                       | Campus-adjacent main theater of care; incubation around Tsinghua/PKU/CAS with the best street frontage reserved for care; 0702 care-station network: visit accompaniment, childcare, digital literacy. ~1,043,000 m <sup>2</sup> (+0.02%) | embedding the care-station network                    | visit accompaniment, childcare, digital literacy         | campus boundaries and ownership to be verified     |
| Dazhongsì AI Industry Cluster<br>Develop Studio                      | Urban-type AI-native consumption district; agent/smart-terminal/content-consumption formats; four-quadrant pedestrian connection at the station. ~720,000 m <sup>2</sup> (+0.06%)                                                         | four-quadrant pedestrian connection at the station    | smart terminals and content consumption                  | centroid deviation (Issue #1029); directional only |

勘误声明 / Erratum: Erratum notice: Issue #1029 confirms the PROV-KEY-003 centroid deviates about 2.26 km, so all spatial conclusions for Dazhongsì are directional only; no parcel-level commitment is made before the official boundary is released.

AI 场景与实施运营 · AI Scenarios and Implementation Operations

12 张场景卡（3 张产业测试验证 T1–T3）+ 7 类用户画像：场景—空间—运营映射与长期运营机制。

01 AI medical–visit accompaniment & registration assistant

testing/validation T2

referral to appointment slots and volunteers; all medical advice human–reviewed

02 dementia anti–wandering guardian circle

service

family–authorized geofence; community specialist human confirmation

03 accessible slow–mobility navigation

testing/validation T3

crowdsourced conditions + low–intrusion sensing; labeled “not an approved traffic scheme”

04 community field testing of rehabilitation robots

testing/validation T1

limited–speed testing; safety officer throughout

05 community meal assistance & low–speed delivery

service

speed limits and human takeover in mixed traffic

06 after–school childcare coordination

service

parental authorization, social–worker review

07 Jing–Zhang culture AI guide

experience

culture–and–history review; AI content labeled

08 enterprise services copilot

industry

does not replace professional legal advice

09 public–safety & event–operations review

governance

every disposition decision made by a human

10 community repair workshops

operations

skill matching for appliances, shoes, and code

11 digital–literacy companionship classes

service

one–on–one slow teaching; zero data collection

12 Dazhongsi AI–native consumption experience

consumption

AI–generated content explicitly disclosed

用户画像（7 类） · User personas

User personas (7 types; care–vulnerable groups first): children (safe school routes / no minor–trajectory collection) · seniors (visit accompaniment / no health–data collection) · people with disabilities (accessible navigation / anonymized road conditions) · low–digital–literacy residents (staffed windows / minimal deletable records) · caregivers (respite / scheduling data belongs to the institution) · open–source developers (release hall / aggregate–only activity data) · startup teams (shared testbeds / compute separately authorized).

场景—空间—运营映射 · Mapping

Scenario–space–operations mapping: experience and governance scenarios land on the 2,960,242.715 m<sup>2</sup> public–space base; service scenarios land on 0702 community–service land and the station network; testing–and–validation scenarios (T1–T3) run only within designated routes and time windows, with mutual recognition proposed with BDA’s scenario–access mechanism. The public–space share of 0.259379 and green share of 0.252849 are the physical capacity ceiling for care scenarios.

年度活动与长期运营（agent.6） · Annual program & operations

Annual program follows the four MEND verbs: spring Caregivers’ Assembly (Wall of Honor ceremony + care–technology exhibition) · summer Mending Workshops (community repair day + joint university design week) · autumn Developers’ Open Day (contribution–wall lighting + scenario–test recruitment) · winter Winter Resilience Stress–Test Week (care–dispatch drills under blizzard/extreme cold). Long–term operations recommend an independent “Friends of the Green Spine” mechanism (borrowing from the High Line); scenario–access approval, event scheduling, annual data–governance report, residents’ council.

指标复核与合规响应 · Metrics Verification and Compliance Response

12 项 known 指标可从 GeoJSON 复算；3 项控规类指标保持 unknown；合规覆盖公告 17 条 + agent 6 条。
