Overall Urban Design Masterplan V6

Urban form first: fabric, station-city links, building clusters, public interfaces, algorithm evidence

geodesic architecture

open source urban design

Evidence rail

M01
11.413 km² **provisional scope**
not an official redline;

D01
KEEP **must retain**
rail skeleton, reusable fabric, site

D02
OPEN **must open**
walls, ground fronts, east-west seams

D03
3 + 12 **civic stages**
three civic courts host twelve AI+

D04
G0-G4 **exit gates**
human review and rollback for every

Jury from afar
Read the urban skeleton, three civic stages, east-west stitches, and station-city edges first.

Evidence close-up
Every line has data, rule, responsibility, and stop condition.

Provisional boundary - not a statutory redline - all metrics require official data review

V6 urban-form first / evidence-at-edge

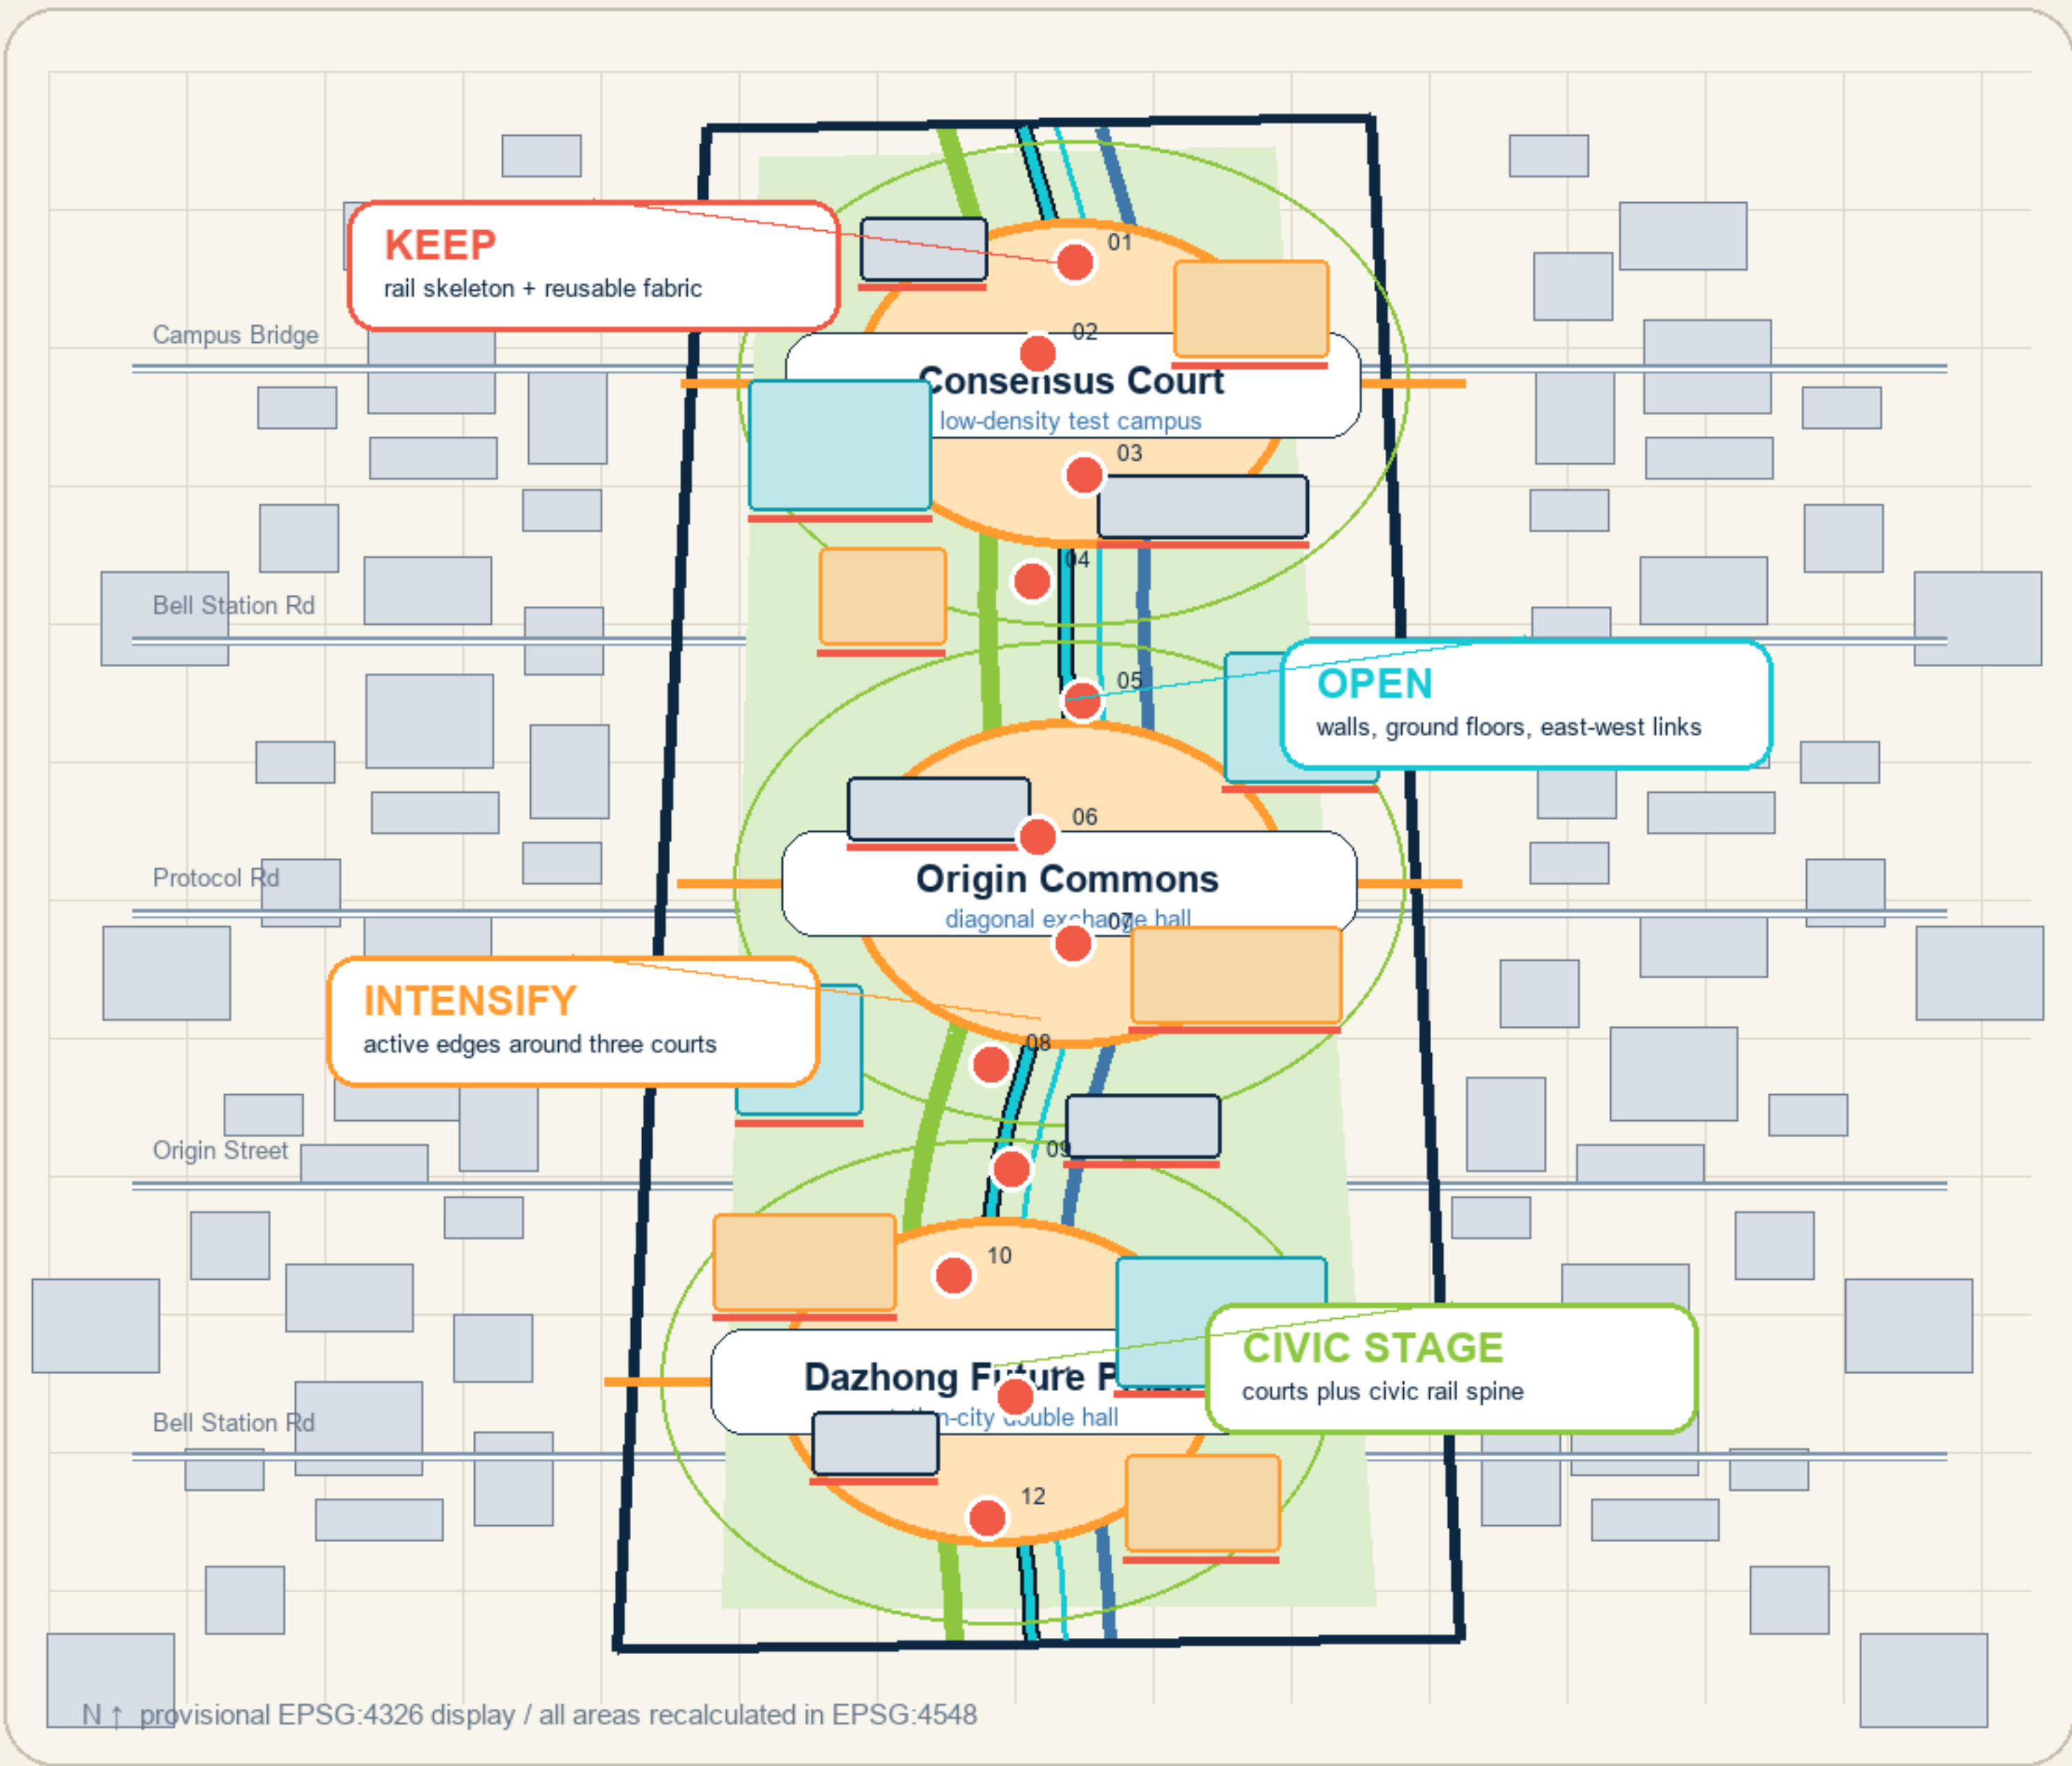

JZ/URBAN-FORM · 02

Land Use and Building-Intensity Decisions

Not abstract zoning: keep, open, intensify, and activate public edges

geodesic architecture

open source urban design

Four spatial decisions

KEEP

rail skeleton, memory edges, reusable buildings

OPEN

walls, parking edges, closed ground floors

INTENSIFY

R&D, talent, civic service around courts

REPAIR

shade, rain, walking, public learning

Review reading

Land use is not color fill; it answers what stays, what opens, where intensity goes, and where civic stages are made.

Provisional boundary - not a statutory redline - all metrics require official data review

V6 urban-form first / evidence-at-edge

JZ/URBAN-FORM · 03

Three Key Areas - Rules Converted to Urban Form

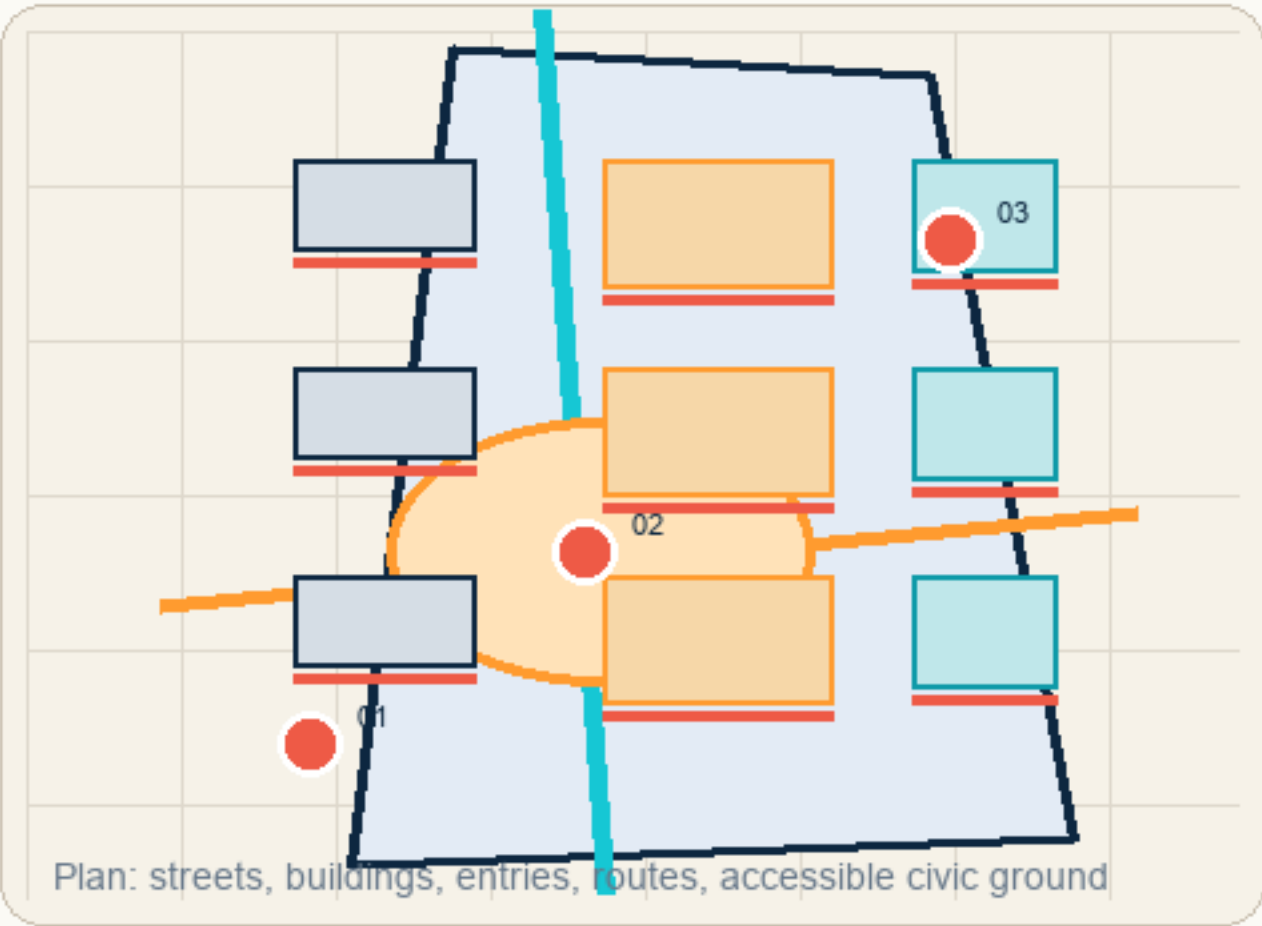

Each key area has plan, section, ground interface, and operating sequence

geodesic architecture

open source urban design

Consensus Court

low-density test campus

Ground-floor public interface

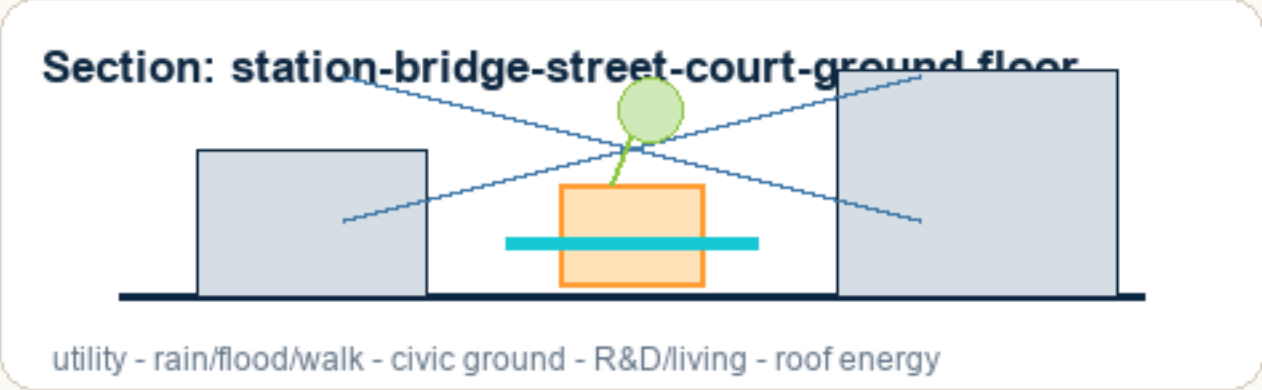

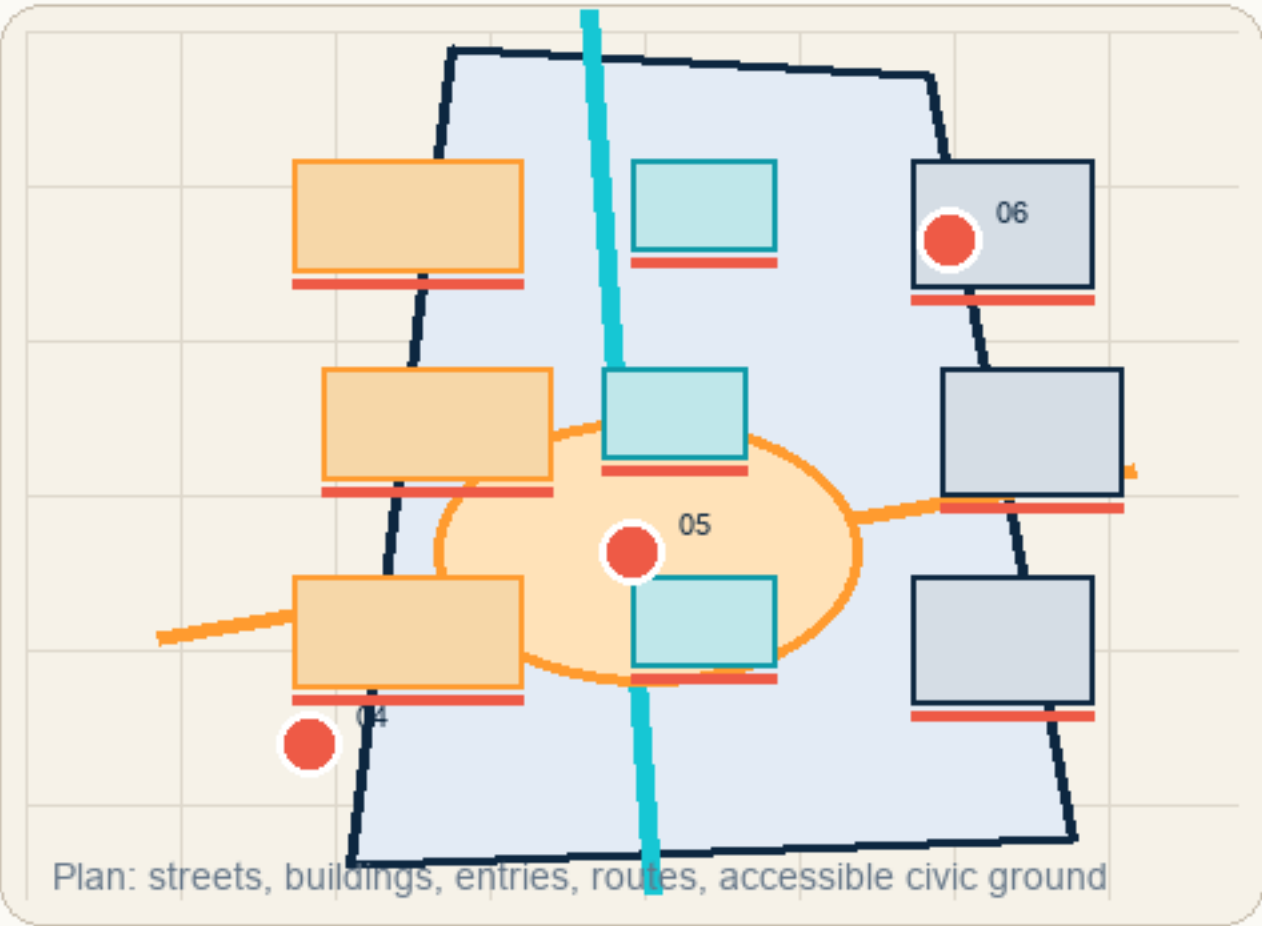

Operation gates

Origin Commons

diagonal exchange hall

Ground-floor public interface

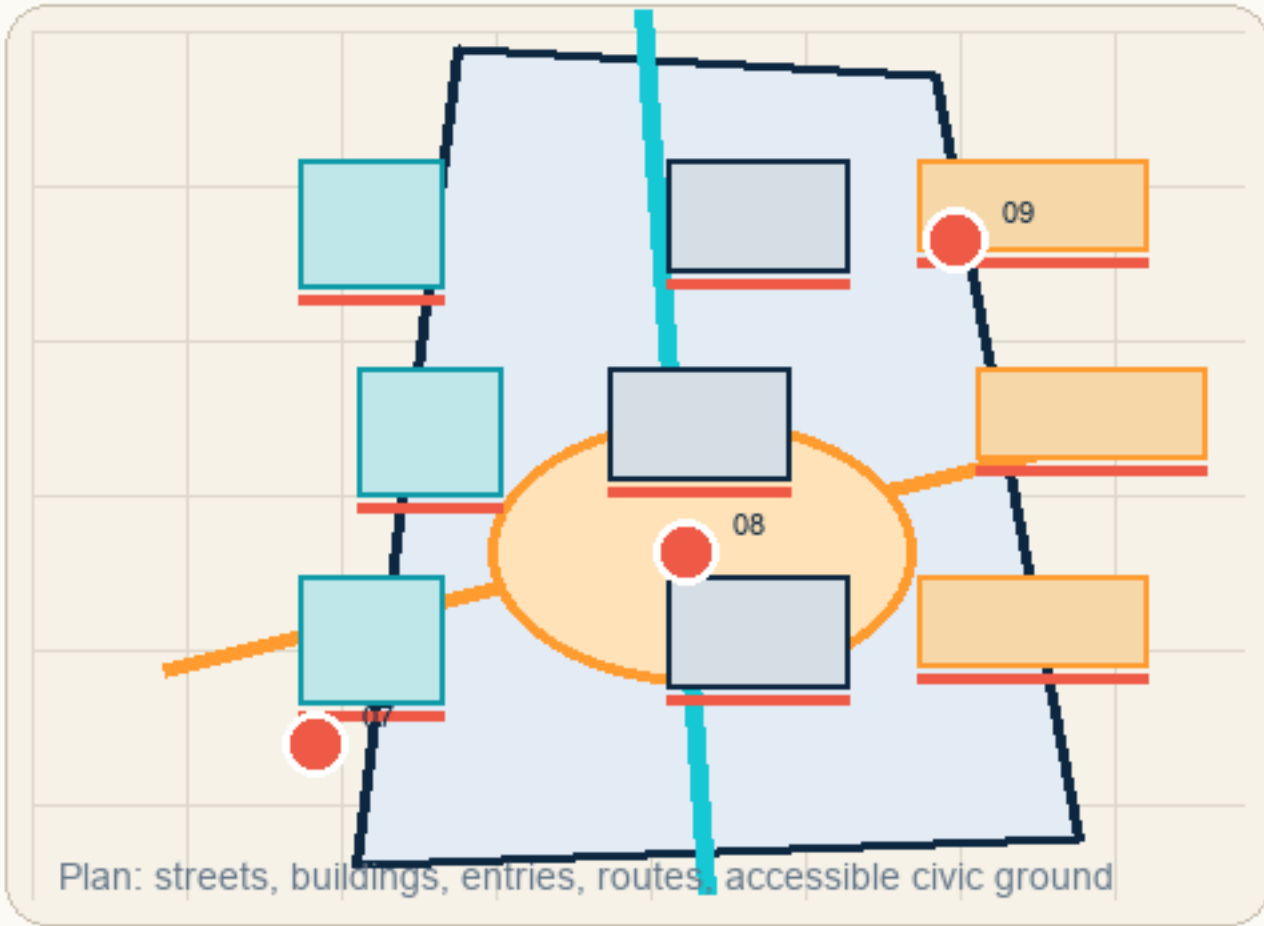

Operation gates

Dazhong Future Plaza

station-city double hall

Ground-floor public interface

Operation gates

Provisional boundary - not a statutory redline - all metrics require official data review

Station-Bridge-Street-Court Mobility and Blue-Green System

Mobility is a network of stations, cross-links, ground fronts, shade, and rainwater

geodesic architecture
open source urban design

Network hierarchy

- civic rail spine**
continuous accessible walk/cycle with 12 AI+ nodes
- east-west stitches**
connect campus, parks, neighborhoods, stations
- shade and rain loop**
trees, swales, inlets, seating as infrastructure
- safety gates**
robot/edge AI pilots pass offline review first

Physical coupling

Station exits, bridge undercroft, street-corner ground floors, court entries, shade, and rainwater are resolved in one section.

Provisional boundary - not a statutory redline - all metrics require official data review

V6 urban-form first / evidence-at-edge

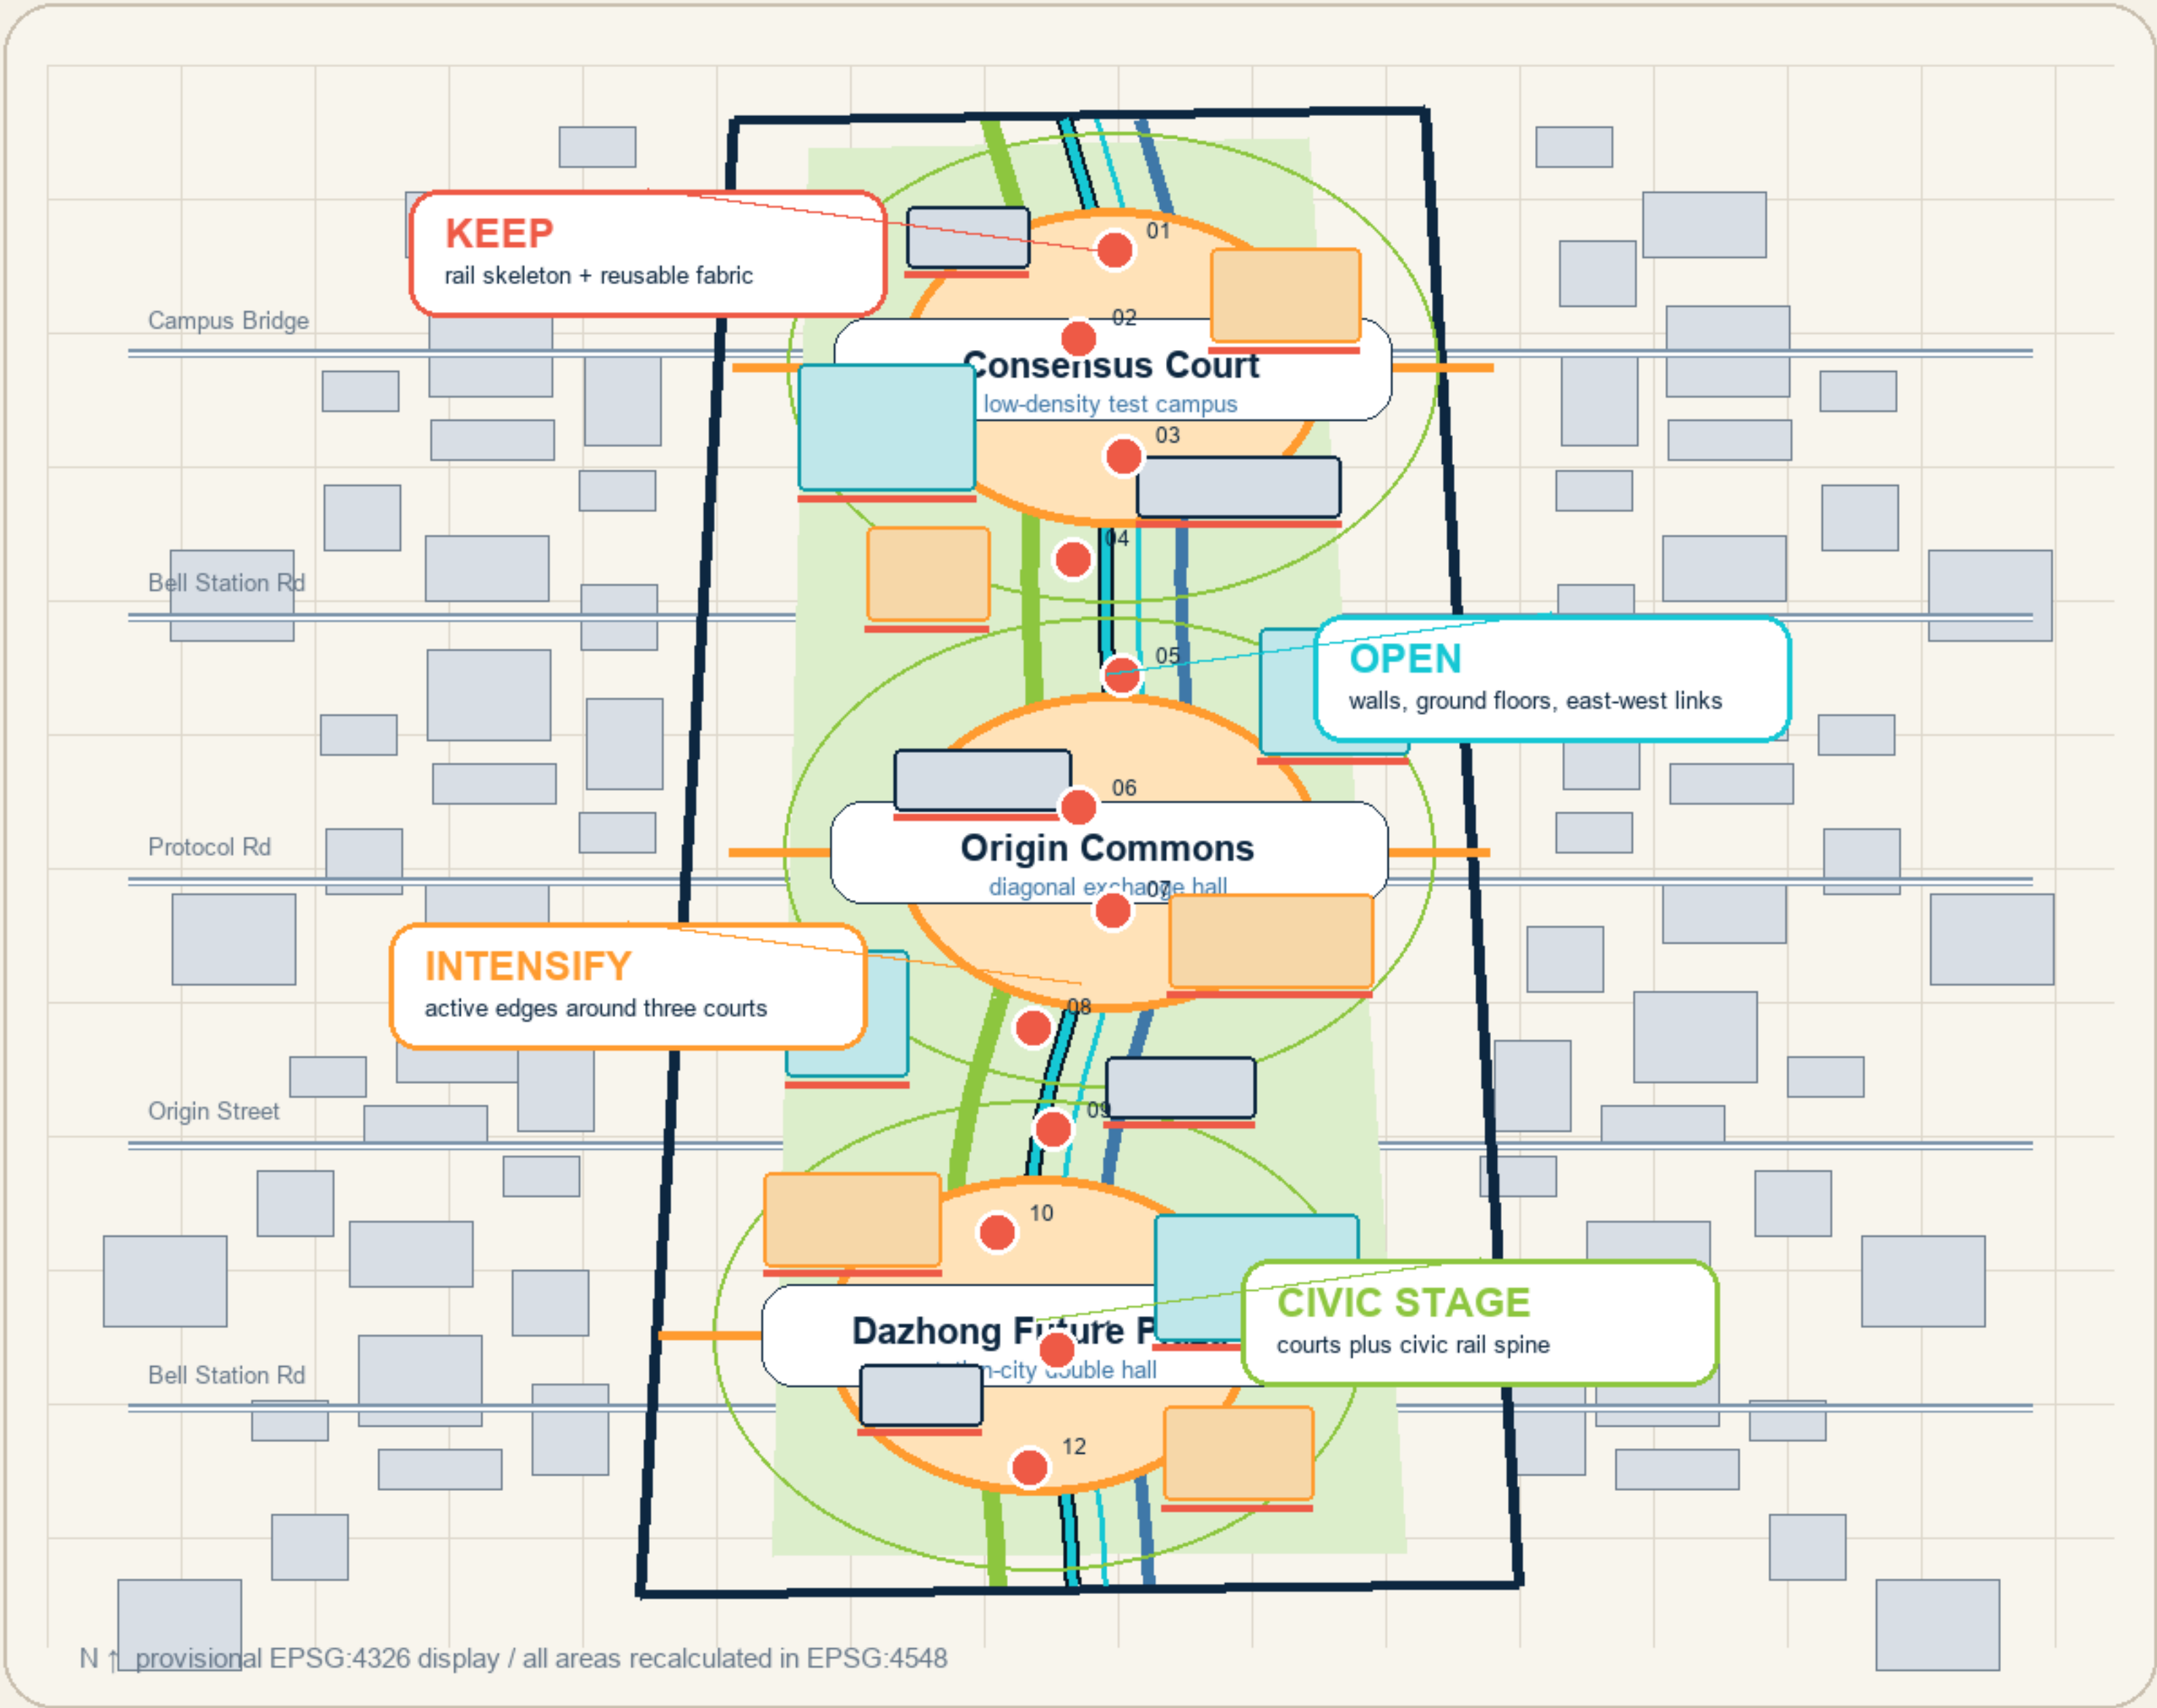

JZ/URBAN-FORM · 06

Algorithmic Rules Overlaid on Spatial Drawings

Algorithms are not flowcharts; they constrain lines, areas, nodes, fronts, and phases

geodesic architecture

open source urban design

Four spatial algorithms

- A1 walkability repair**
gaps generate east-west stitches
- A2 public frontage first**
closed ground fronts open or enter repair list
- A3 shade-rain coupling**
heat and flood risk place trees/swales
- A4 pilot retirement gate**
incident, appeal, bias, or maintenance failure triggers G4

Provisional boundary - not a statutory redline - all metrics require official data review

V6 urban-form first / evidence-at-edge

From Vision List to Auditable Project Portfolio

Each project has owner, cost band, spatial object, KPI/SLO, and exit condition

geodesic architecture

open source urban design

Near term G0-G1

evidence lock, 1:1 mock-ups, two gap repairs, passport pilot

Mid term G2-G3

three courts linked, adaptive reuse, talent services, controlled sandbox

Long term G4

annual audit, global roadshow, keep/modify/remove pilots

Projects are spatial-operation contracts, not event lists.

If safety, public value, maintenance, or equity thresholds fail, a pilot pauses, rolls back, or exits; this is how algorithm governance constrains urban form.

Provisional boundary - not a statutory redline - all metrics require official data review
