

ONE LOAD SPINE · THREE OVERFLOW COURTYARDS

An urban protocol that keeps public service available under stress

JING-ZHANG NO OVERLOAD · CONCEPTUAL / PROVISIONAL GEOMETRY

THREE AREAS · THREE VALIDATION JOBS

One capacity protocol, distinct spatial roles

01

ZHONGZHIYUAN | STRESS-TEST YARD

Test before deployment: model, robot and edge failover

02

AI ORIGIN | MANUAL RELAY COMMONS

Digital, staffed and offline paths coexist

03

DAZHONGSI | PEAK SWITCH HALL

Visible queues, robot holding, event overflow

NORMAL → AMBER → HANDOVER → RECOVER

JING-ZHANG NO OVERLOAD · CONCEPTUAL / PROVISIONAL GEOMETRY

REDUNDANT MOVEMENT & BLUE-GREEN OVERFLOW

One north-south spine, six east-west relays, twelve service nodes

JING-ZHANG NO OVERLOAD · CONCEPTUAL / PROVISIONAL GEOMETRY

LAND USE AS A CAPACITY SYSTEM

Concept functions + Load Spine + three switchable public spaces

4 × CAPACITY ROLES

- Shared innovation
- Civic service
- Open space
- Support functions

Colours show conceptual roles, not statutory rezoning.

JING-ZHANG NO OVERLOAD · CONCEPTUAL / PROVISIONAL GEOMETRY

ONLY CLAIM WHAT CAN BE RECALCULATED

Spatial facts, proposal commitments and operational unknowns

KNOWN ≠ APPROVED

- GeoJSON → EPSG:4548 → metrics.json
- Source → assumption → claim
- Proposal → drawing → offline visual
- Validator → self_check.json

PENDING: statutory FAR, height, peak capacity, recovery time

JING-ZHANG NO OVERLOAD · CONCEPTUAL / PROVISIONAL GEOMETRY

NORMAL → AMBER → HANDOVER → RECOVER

Twelve reviewable scenes use one protocol. AI may predict and recommend, but a person controls service denial, street closure and recovery.

PENDING: official boundaries · statutory controls · utilities · field capacity · recovery targets
