

JingZhang Genesis — Site Overview & Three-Tier Scope

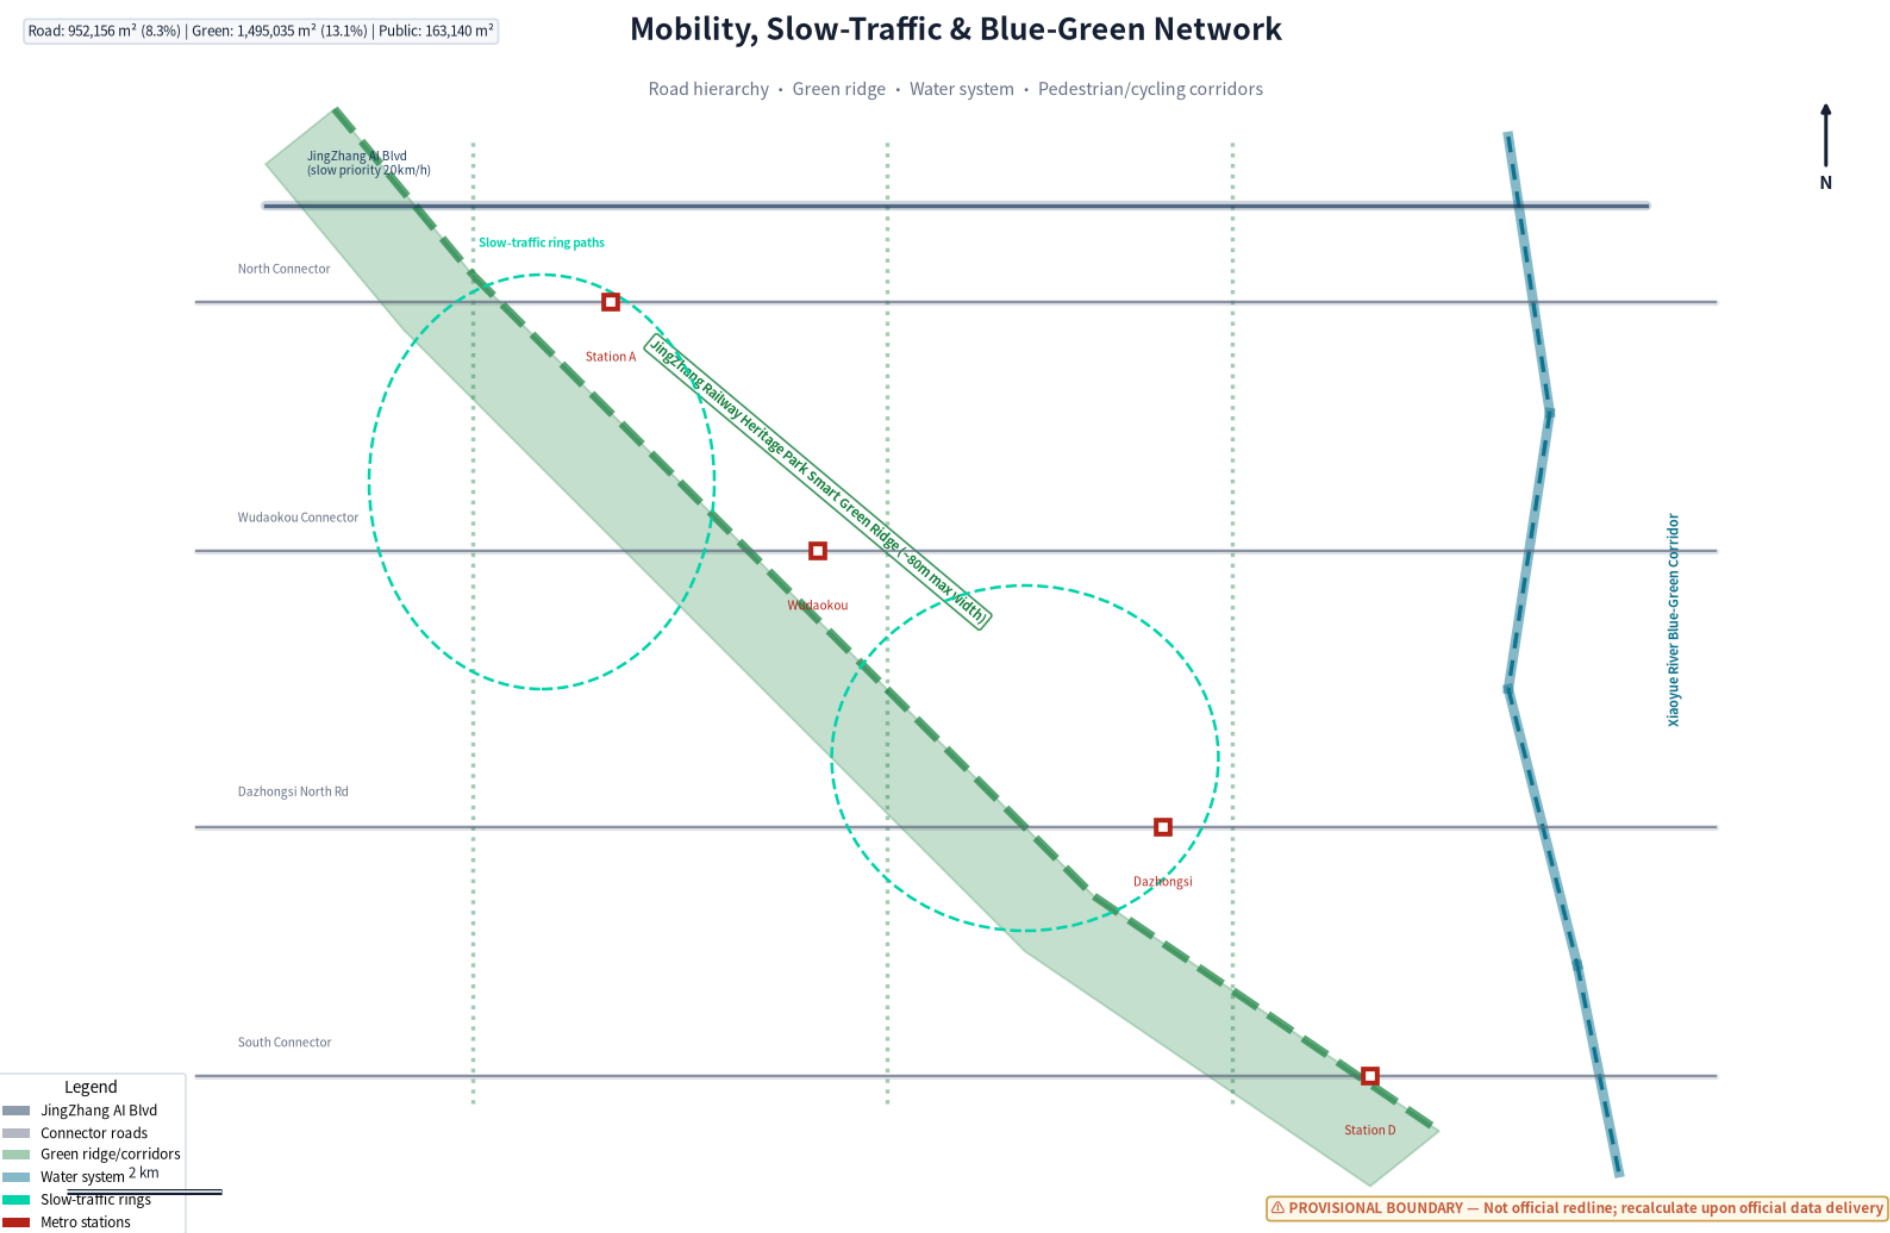

Land Use

Key Areas

Mobility & Blue-Green

Metrics & Evidence

Core Metrics — Evidence Chain & Recalculation Triggers				
Metric	Value	Formula	Confidence	Recalc Trigger
Site Area	11,412,825.4 m ²	polygon_area(site_boundary)	Medium	Official redline release
Green Area	1,495,014.4 m ²	sum(polygon_area(site_green))	Medium	Official boundary + land use
Green Ratio	0.131 (13.1%)	green_area / site_area	Medium	Boundary recalc
Public Space	163,129.6 m ²	sum(polygon_area(site_public))	Medium	Official boundary + land use
Public Space Ratio	0.0143 (1.43%)	public_space / site_area	Medium	Boundary recalc
Building Footprint	145,944.7 m ²	sum(polygon_area(site_building))	Low	Building survey + BIM controls
Building Density	0.0128 (1.28%)	footprint / site_area	Low	Building survey + BIM controls
Building Count	44	count(building_footprint)	Medium	Design revision
Key Nodes	3	count(key_area_footprint)	High	N/A
Road Area	953,156.1 m ²	sum(buffer(site_road, 2).area)	Low	Official road redline

△ PROVISIONAL
△ All values are PROVISIONAL, design model quantities derived from reproducible provisional rough boundaries. They are NOT official area claims. Recalculate when official polygons are released.
All formulas use projected coordinate system: EPSG:4548 (CGCS2000) / 3-degree Gauss-Krüger CRS (UTM).
