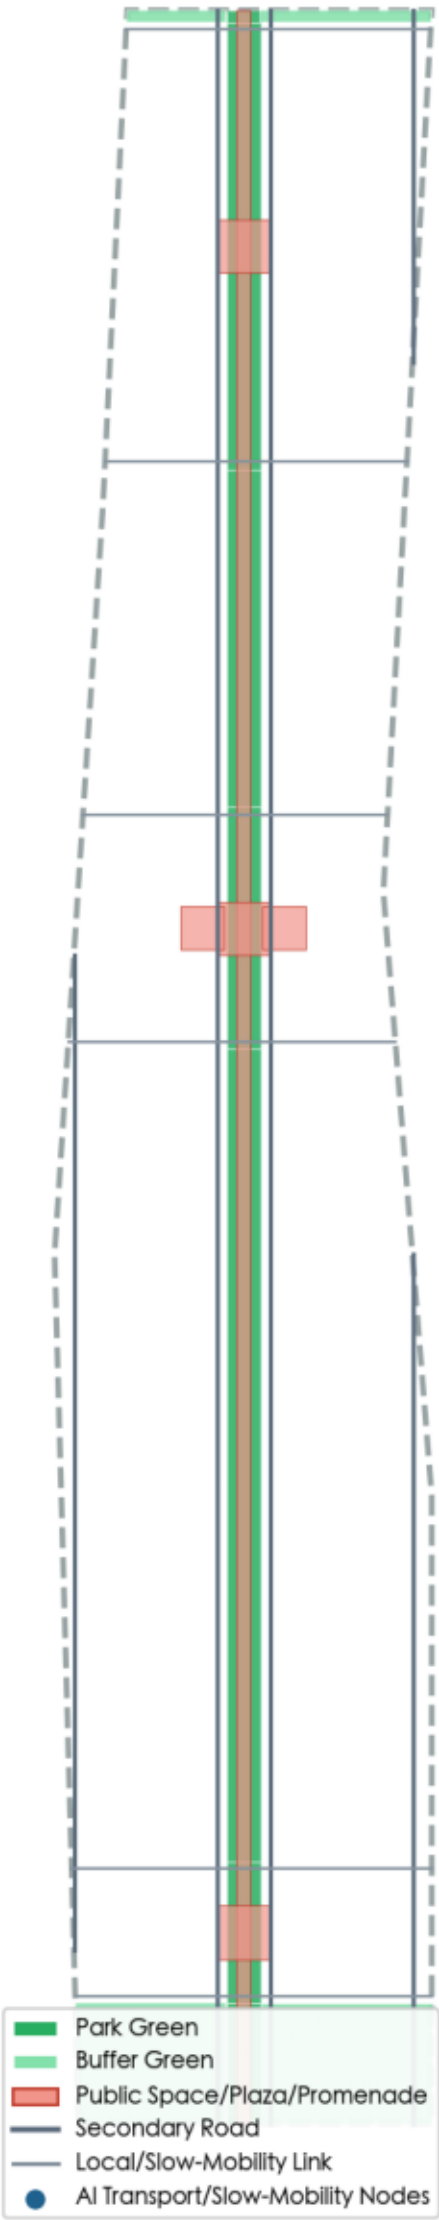

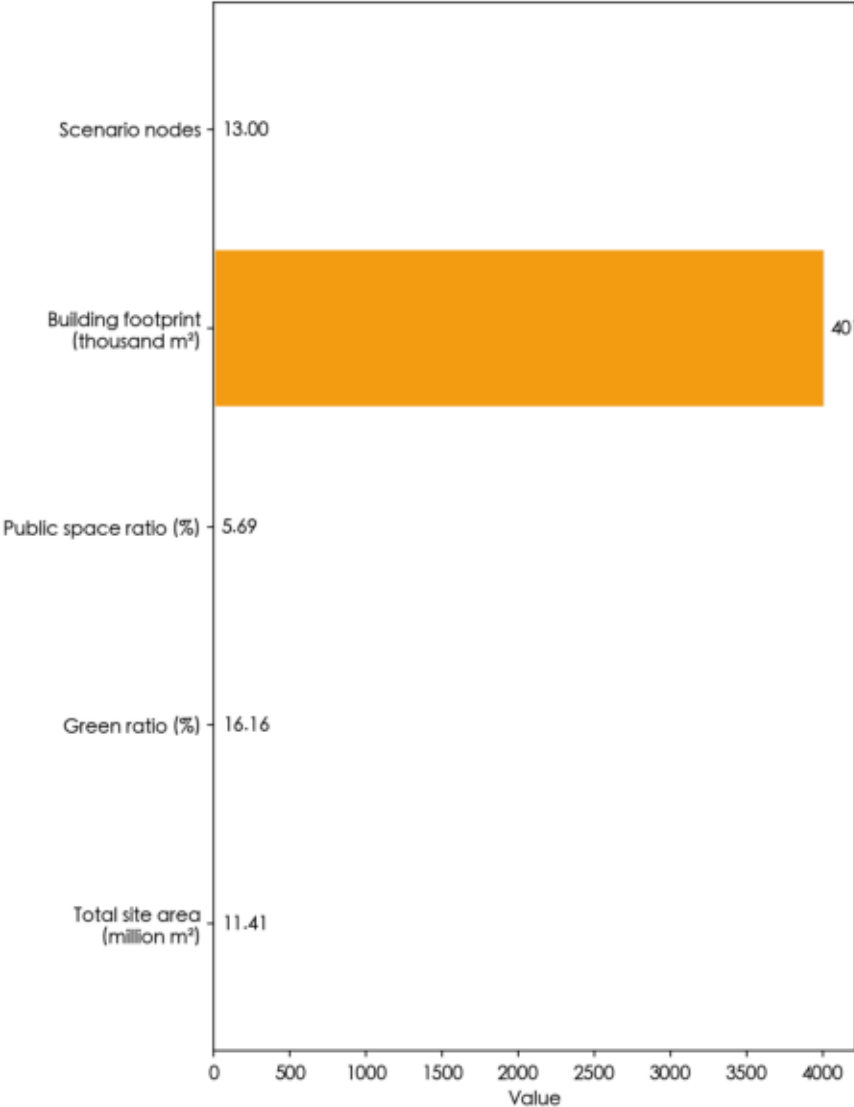

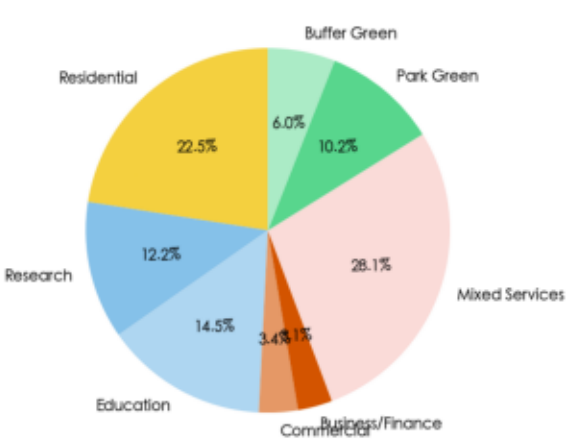

Fig 5: Core Metrics Recalculation and Evidence Chain

Core metric recalculation

Land-use mix

Evidence chain

1. site_area_sqm
→ geometry/site_boundary.geojson (EPSG:4548 recalc)
 2. green_ratio
→ geometry/green_space.geojson / site_boundary.geojson
 3. public_space_ratio
→ geometry/public_space.geojson / site_boundary.geojson
 4. Buildings / roads / scenario nodes
→ Aggregated from corresponding GeoJSON layers
- Note: All geometry is based on the repository's provisional boundary; recalculate after official polygon and regulatory data are released.
