

Jing-Zhang Autonomous Commons

Human continuity comes before vehicle entry; every automated service must be observable, interruptible and reversible.

3 试验庭 / test yards

12 场景卡 / scenario cards

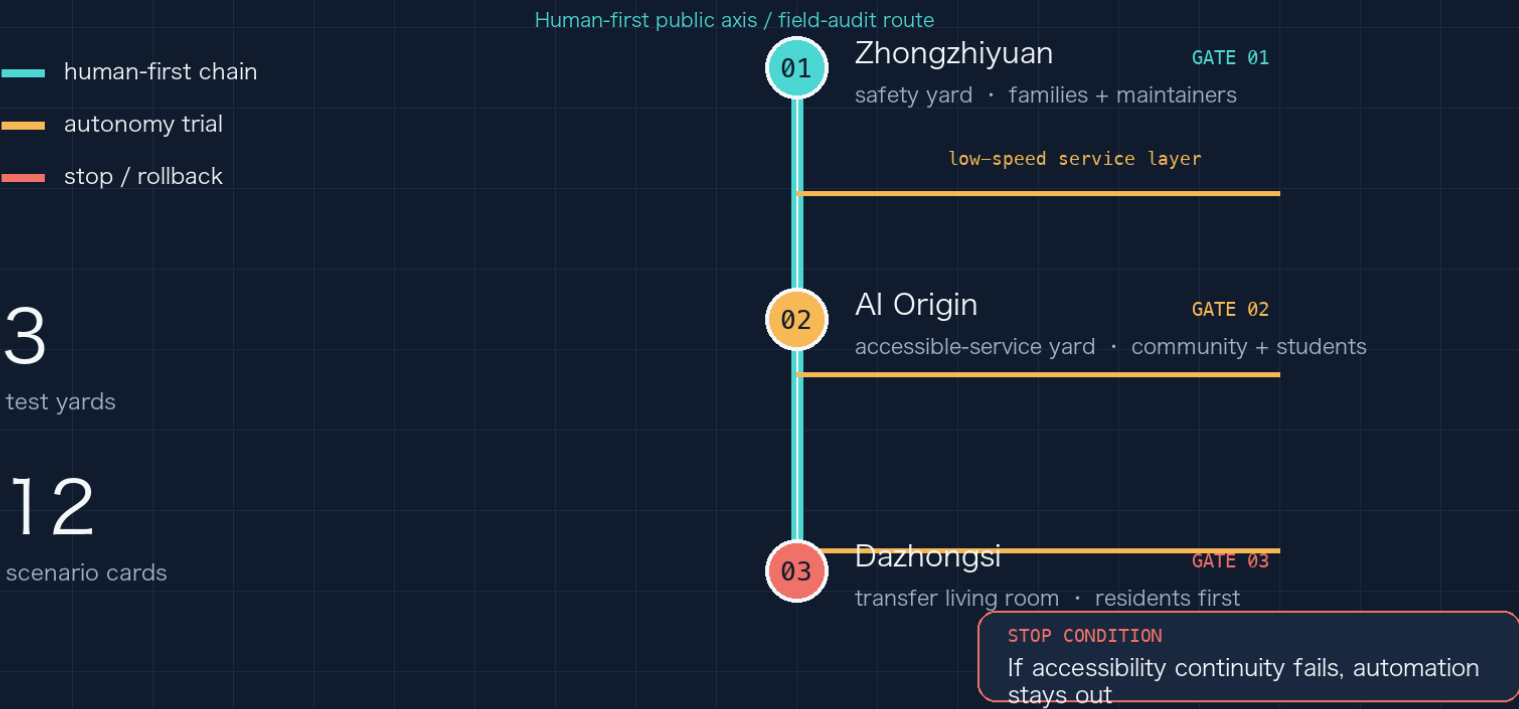

3 证据闸门 / evidence gates

CONCEPT DESIGN · NOT A ROAD-OPENING PERMIT

01 / AUTONOMY FIELD MAP

Jing-Zhang · Three test yards

A continuous public route for people comes first; only then can low-speed, supervised automation enter. The line is an audit route, not a new road.

DESIGN TARGETS ≠ PERMITS / ROUTE AUDIT ≠ VEHICLE ROUTE

147228 / 2026.08 / V2.2

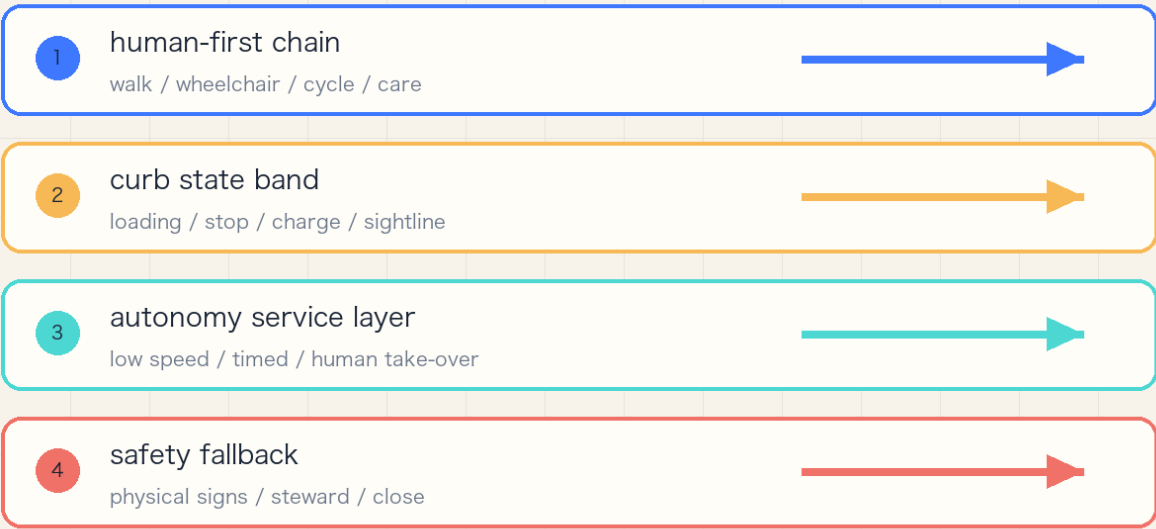

Curb layers and human fallback

Autonomy is a service layer over the human, accessible, cycling and maintenance chain.

02 / LAYERED PUBLIC REALM

Layer first, autonomy second

Replace the idea of giving an entire street to vehicles with four reversible layers: human chain, curb state, supervised service and fallback.

PHASE

observe

test

expand

No failed layer
may break the
human chain

OPERATING SECTION

PUBLIC SPACE IS THE BASELINE / AUTOMATION IS A REVERSIBLE TENANT

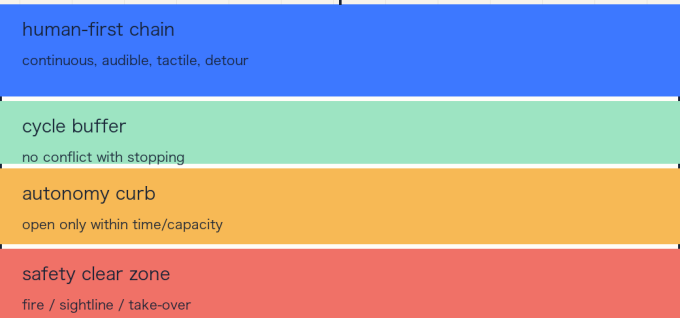

147228 / 2026.08 / V2.2

04 / CURB & ROUTE SECTION

The curb is the autonomy interface

Vehicles are not the first layer. Let people, wheelchairs and cycles pass first; make stopping, loading, charging and take-over visible at the curb.

PEOPLE FIRST

A — cross first, stop second

B — stop within sight

C — close to roll back

CURB STATUS
open / guarded / closed

NO CURB CAPACITY / NO AUTONOMY ENTRY / EVERY TEST HAS A MANUAL FALLBACK

147228 / 2026.08 / V2.2

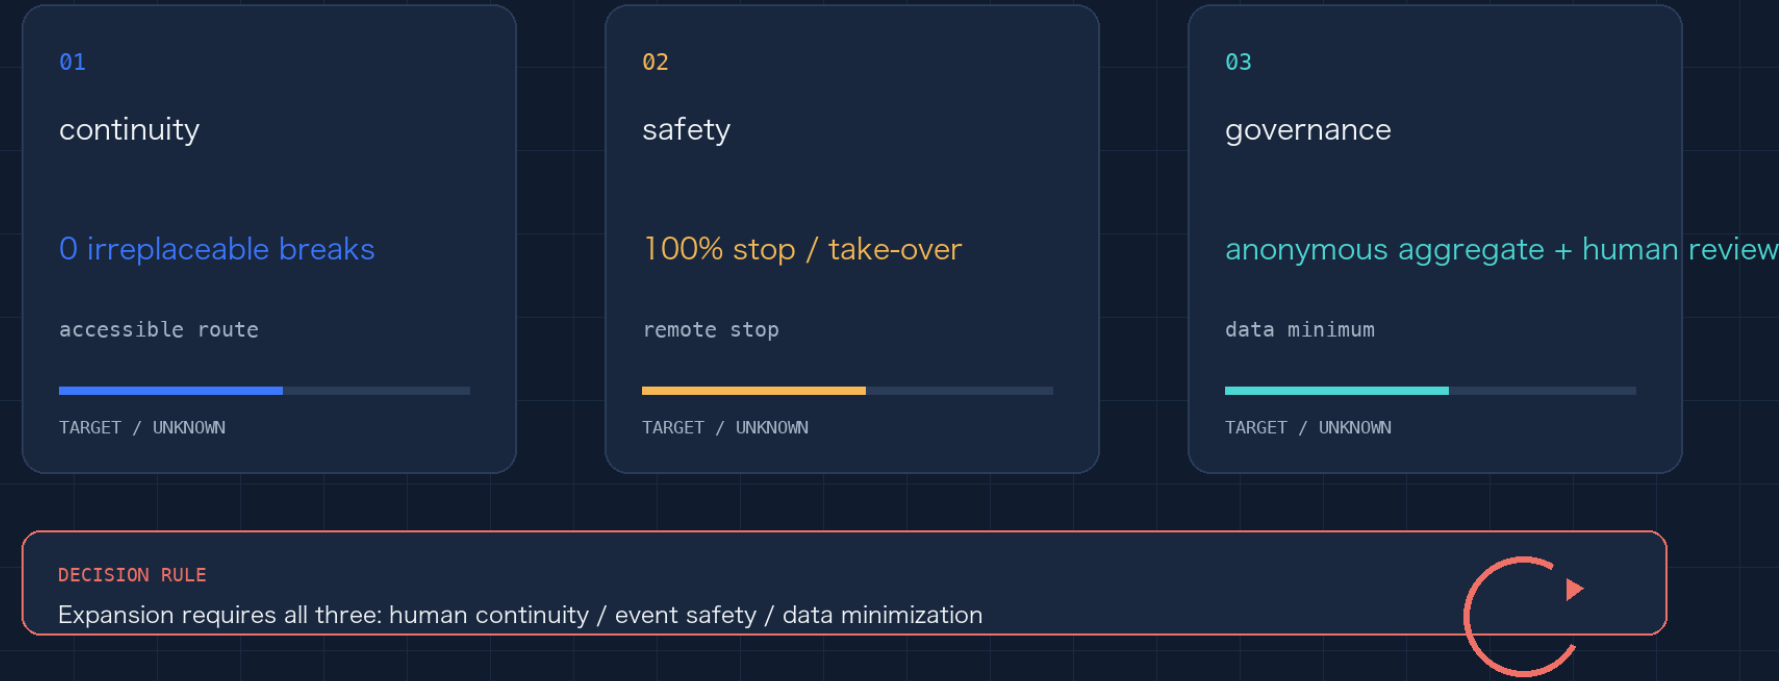

每一层都有开放 / 受控 / 关闭三种状态。

Three evidence gates

Known, design target and unknown must stay separate; unknown never means pass.

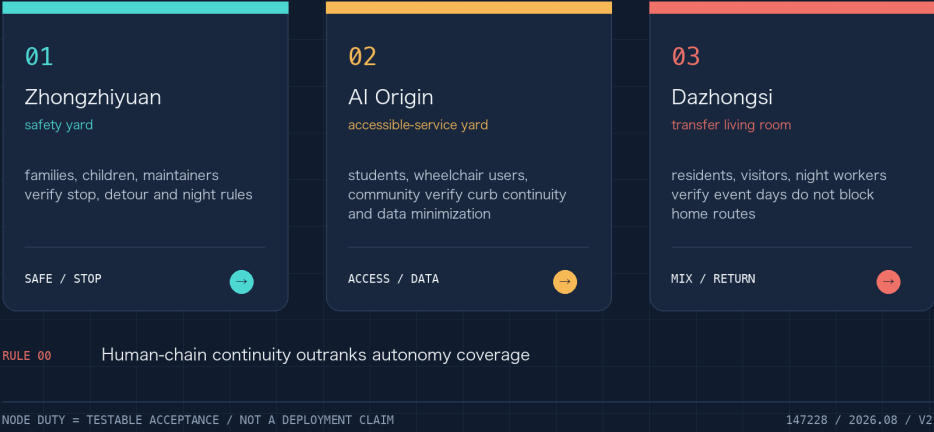

Turn futurism into a continuation test

Every metric carries a state: known, design target or unknown. Unknown is not a blank; it is the next field-test entrance.

Three yards, three duties

Autonomy is not a device procurement. It is a public-service question that residents can understand and operators can take over.

Expand only when continuity, event safety and data minimization all pass; otherwise keep human service.
