

THE MENDING BELT

京张缝合带

Mending a century of east-west severance into twelve crossable public grounds

The core judgment

The Jing-Zhang railway left Haidian two legacies: a spirit of self-reliant innovation worth commemorating, and a nearly ten-kilometre cut running from the North Fifth Ring to Xizhimenwai Street that has separated east from west for a century.

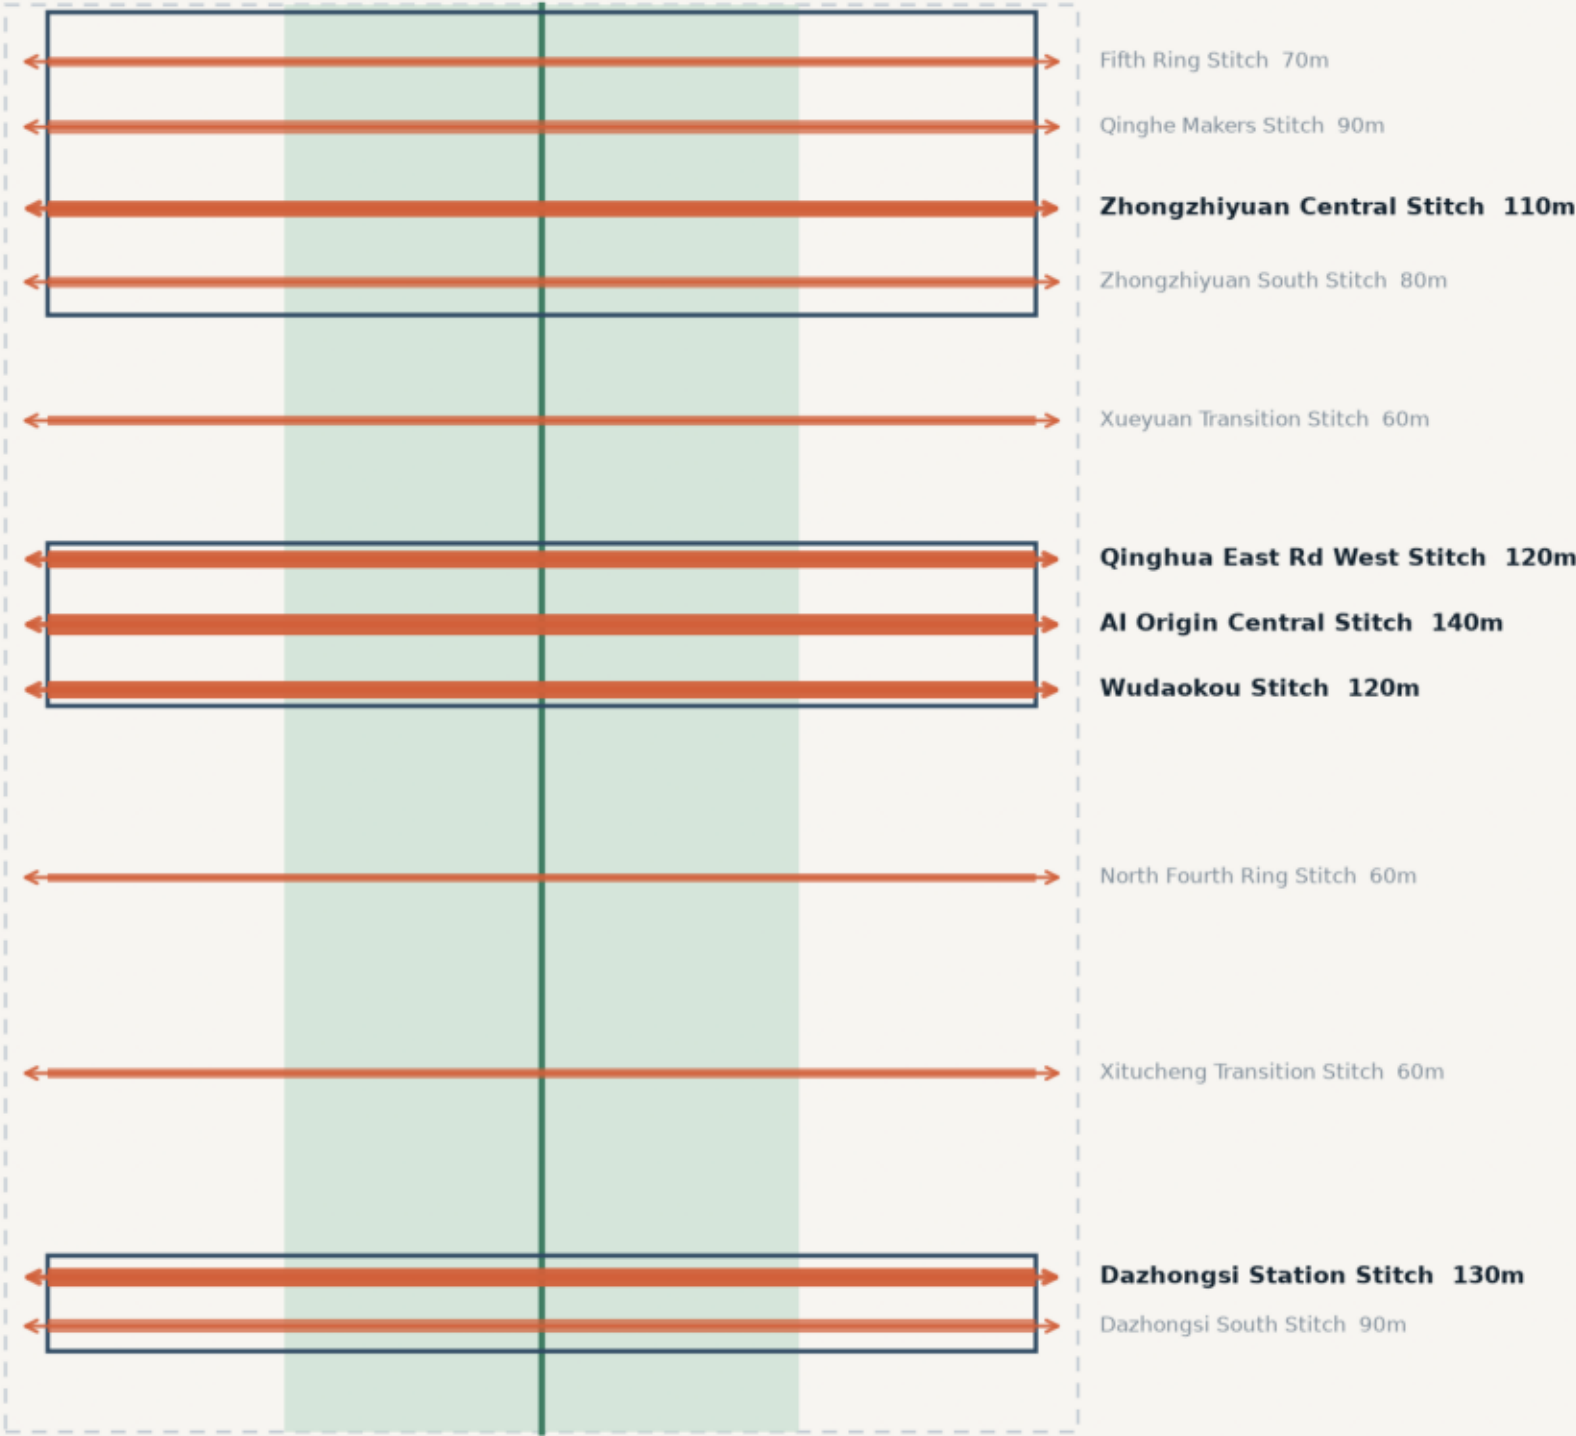

This proposal therefore inverts the usual reading: the belt's first task is not to be walked along more pleasantly, but to become crossable again.

Four design moves

- One continuous heritage seam — public floor and walking spine
- Twelve transverse stitches — the core public-space system
- Paired frontages across the seam — complementary, not repeated
- An all-hours regime — one ground, several roles, no new buildings

The Mending Belt · Overall Structure

Mending a century of east-west severance into twelve crossable public grounds

— One continuous heritage seam

the public floor and north-south walking line

— Twelve transverse stitches

the core public-space system, denser in the key areas

— Paired frontages across the seam

complementary, not repeated, giving real reasons to cross

Legend

- Heritage seam park
- Stitch (110-140 m)
- Stitch (60-90 m)
- Key area (provisional)
- Design area (provisional)

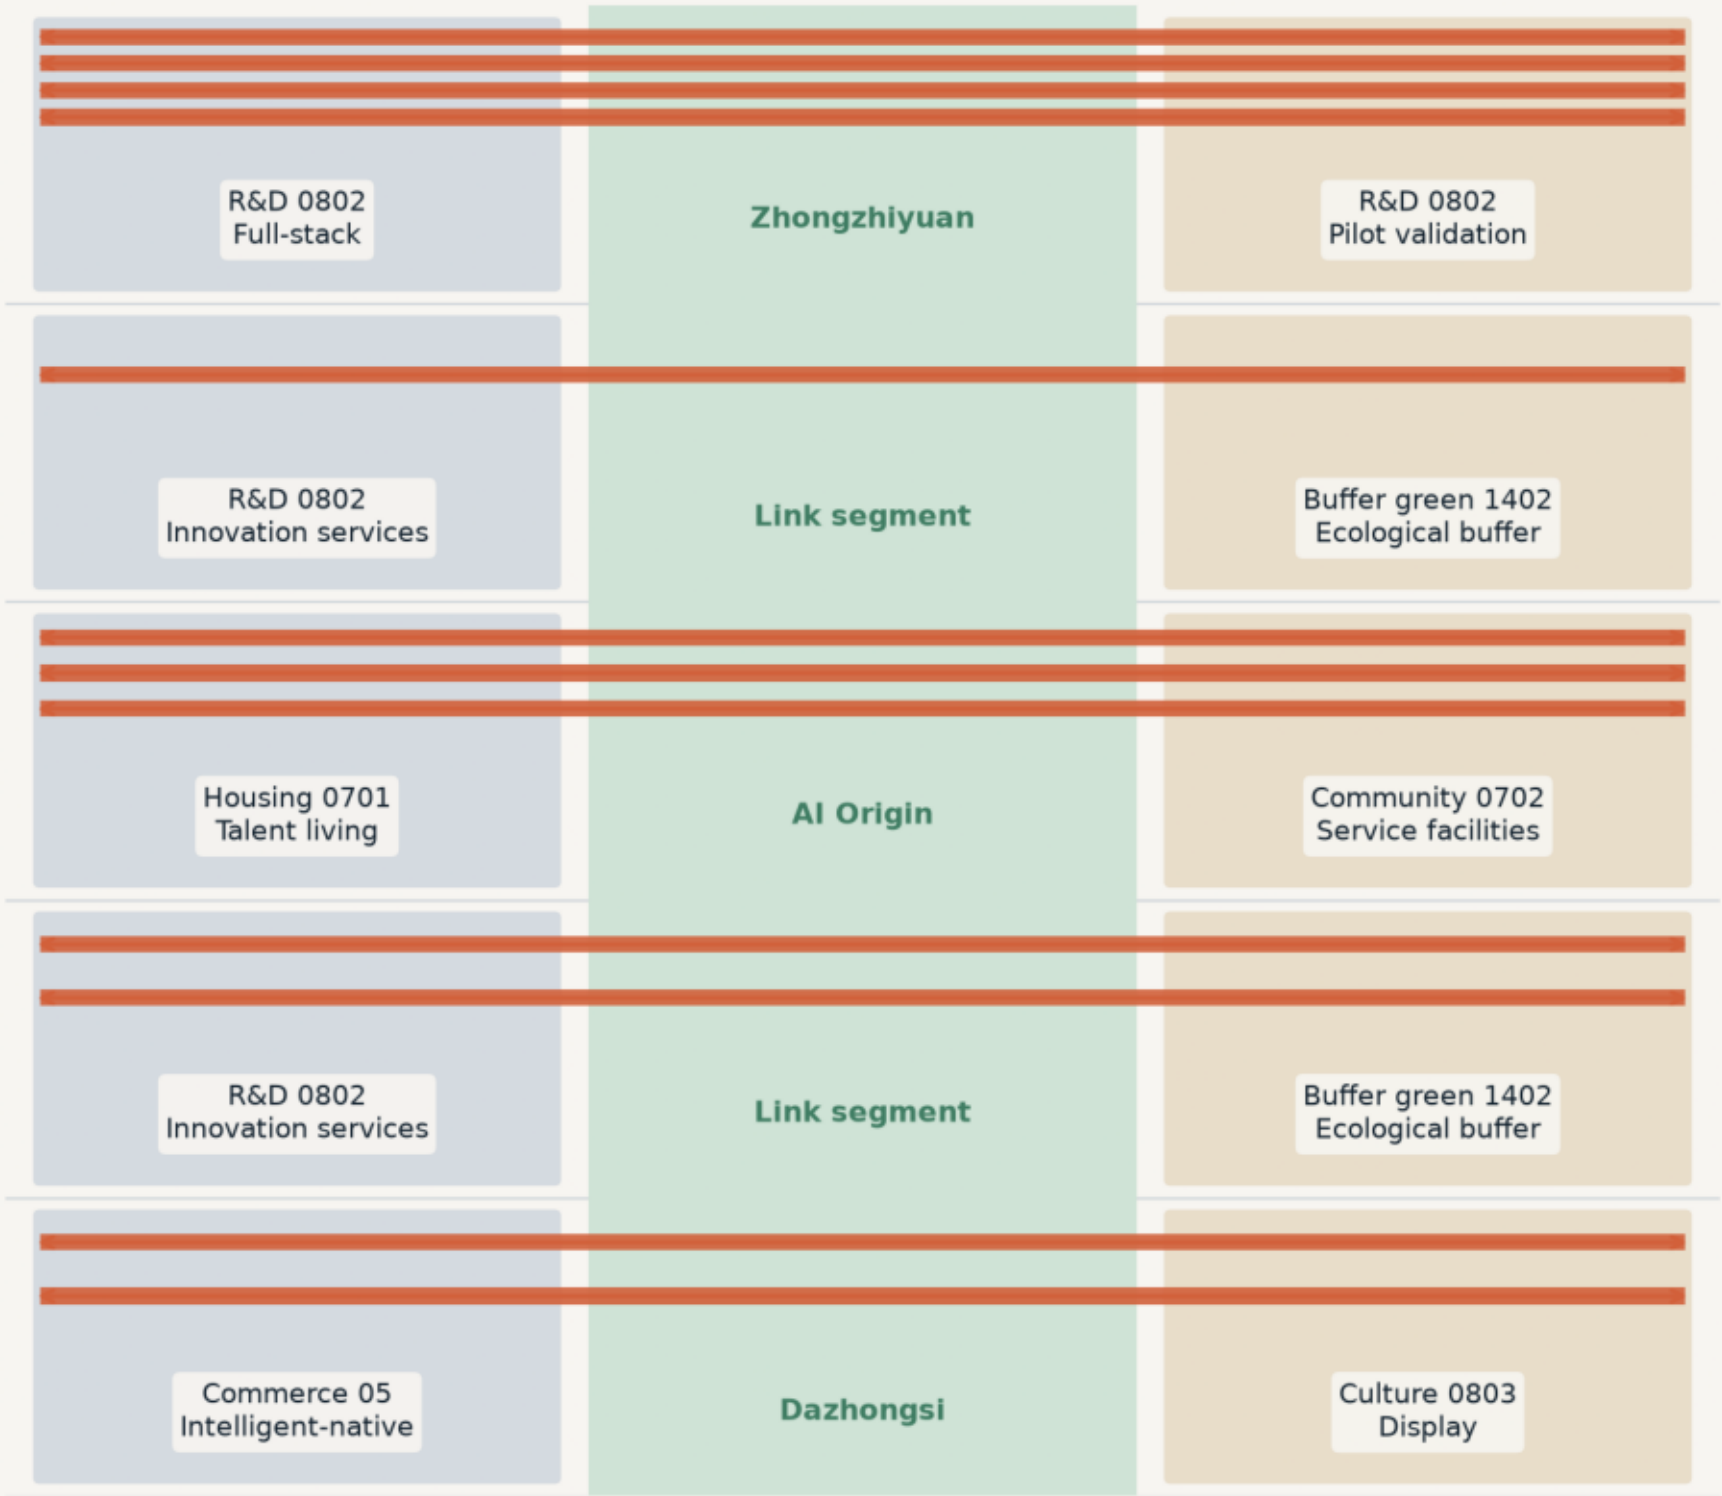

Provisional rough boundary — NOT an official redline; recompute the whole chain once official data is released

Sources: Haidian Branch announcement 2026-05-09 (areas & written extents) + repository provisional boundary; geometry is agent-generated
Diagram: east-west direction exaggerated so the stitches stay legible; not to scale, not for measurement

Conceptual suggestion · not statutory planning or an approval basis

Land Use · Paired Programme Across the Seam

Complementary rather than repeated uses on each side, making crossing a daily necessity

— Why pairing matters

identical uses on both sides would reduce a stitch to unused decoration

— Seam is park green 1401

plaza 1403 where stitches cross; street ground 1207 on the edges

— Gap-free, overlap-free

90 land-use polygons tile the provisional design area within tolerance

- West frontage
- Heritage seam 1401
- East frontage
- Transverse stitch

Provisional rough boundary — NOT an official redline; recompute the whole chain once official data is released

Sources: Haidian Branch announcement 2026-05-09 (areas & written extents) + repository provisional boundary; geometry is agent-generated

Conceptual suggestion · not statutory planning or an approval basis

Key Areas · Three Dense, Two Sparse

Stitch density follows real crossing demand rather than even spacing

— North: validation made public

R&D faces pilot testing across the seam; crossing is the workflow

— Middle: Phase 1 pilot

densest demand, most mixed users, lowest cost of failure, reversible

— South: station-city stitching

next to rail, giving arriving passengers a reason to cross

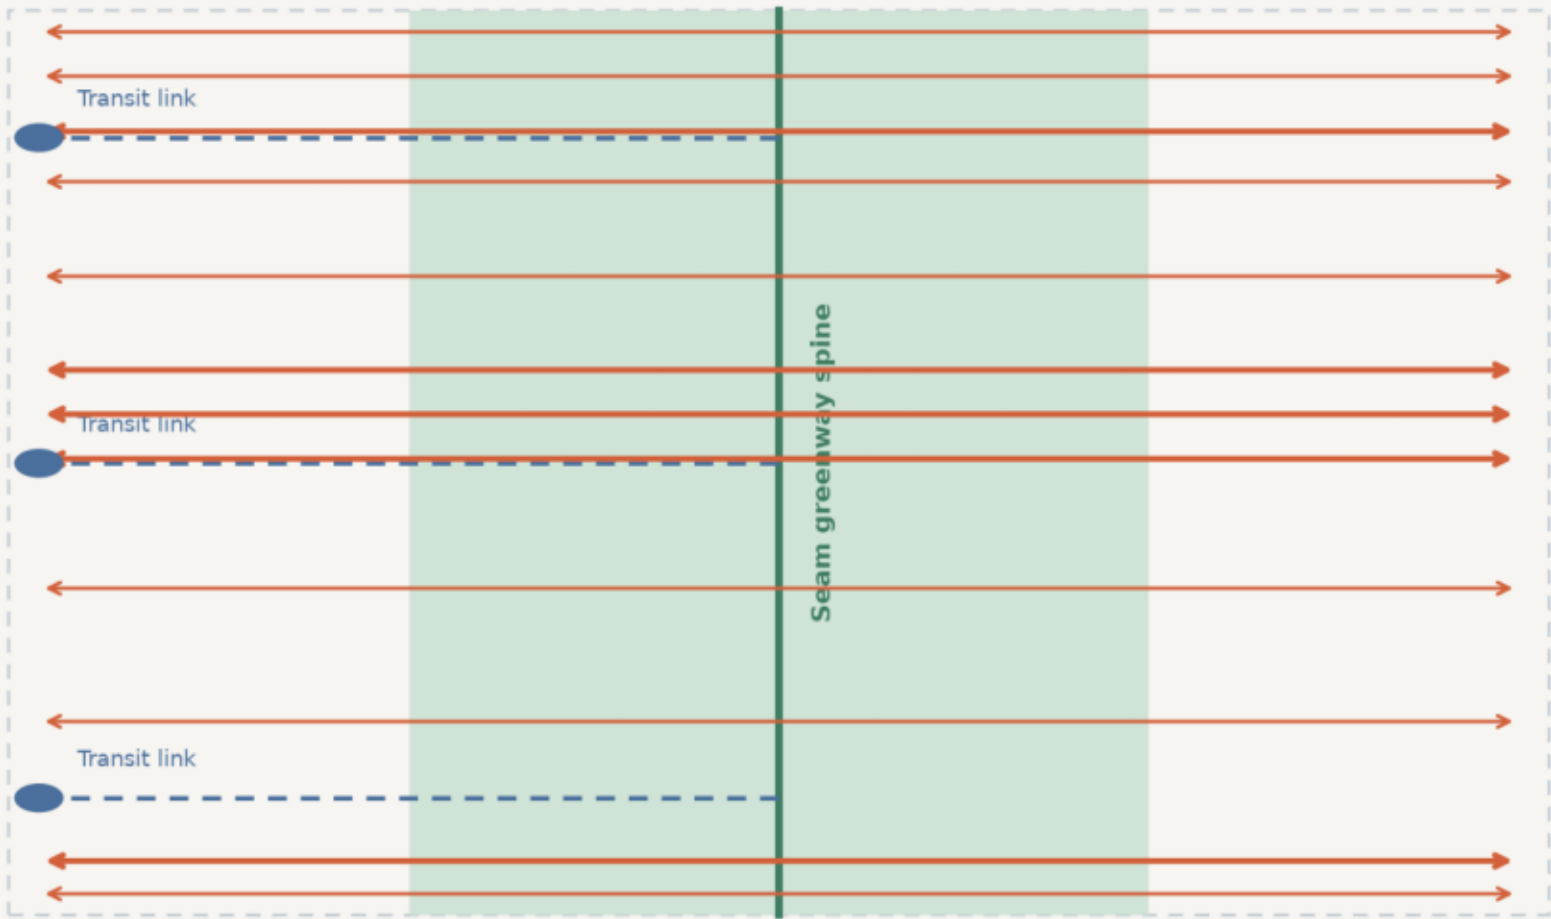

Provisional rough boundary — NOT an official redline; recompute the whole chain once official data is released

Sources: Haidian Branch announcement 2026-05-09 (areas & written extents) + repository provisional boundary; geometry is agent-generated

Conceptual suggestion · not statutory planning or an approval basis

Mobility, Blue-Green & the All-Hours Regime

One longitudinal walking spine, twelve transverse links; one ground, several roles per day

— At-grade continuity first

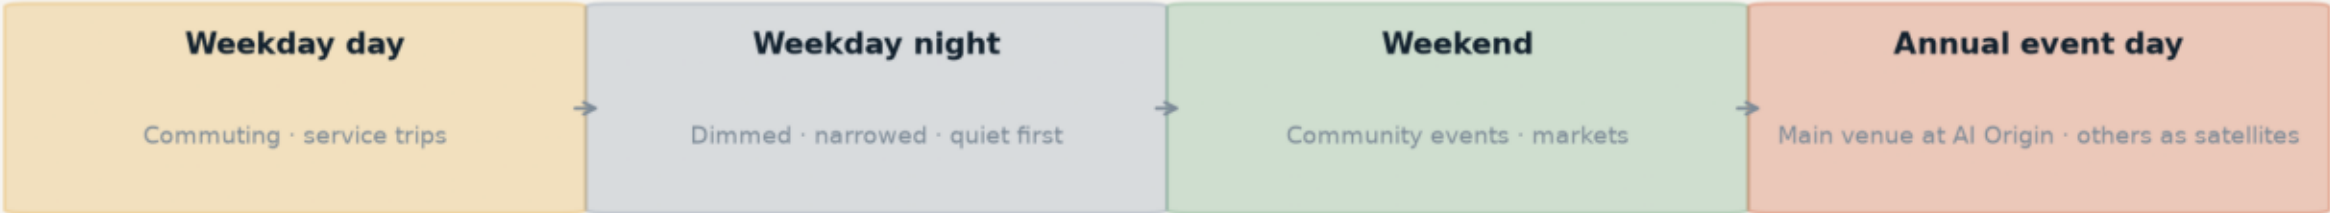

no footbridge or underpass substitute;
step-free throughout

— Alignments are conceptual

not road redlines, rail alignments or
engineering schemes

— All-hours needs no new building

only zoning, movable furniture and
operating rules

The same stitch ground switches role through zoning, movable furniture and operating rules — no new buildings

Provisional rough boundary — NOT an official redline; recompute the whole chain once official data is released

Metrics & Evidence Chain

Known metrics are recomputed from geometry; missing values are declared, never estimated

Design area	11,412,825 m²		site_boundary.geojson
Green area	7,168,017 m²		green_space.geojson
Green ratio	0.628		green_space + site_boundary
Public space	1,289,240 m²		public_space.geojson
Public space ratio	0.113		public_space + site_boundary
Stitch count	12		public_space.geojson
Building footprint	316,530 m²		buildings.geojson
Land-use polygons	90		land_use.geojson
Floor area ratio	pending official data		—
Building height	pending official data		—

Every known metric is independently reproducible from this submission's GeoJSON; once official redlines arrive the whole chain must be recomputed, not just the boundary file.

Task coverage: all announcement 1.3 / 1.4 / 1.5 tasks plus agent.1-agent.6; complete records live in the coverage, standard and design-depth matrices.

Provisional rough boundary — NOT an official redline; recompute the whole chain once official data is released
