

JingZhang AI Line

One Line, Three Stations, Two Wings

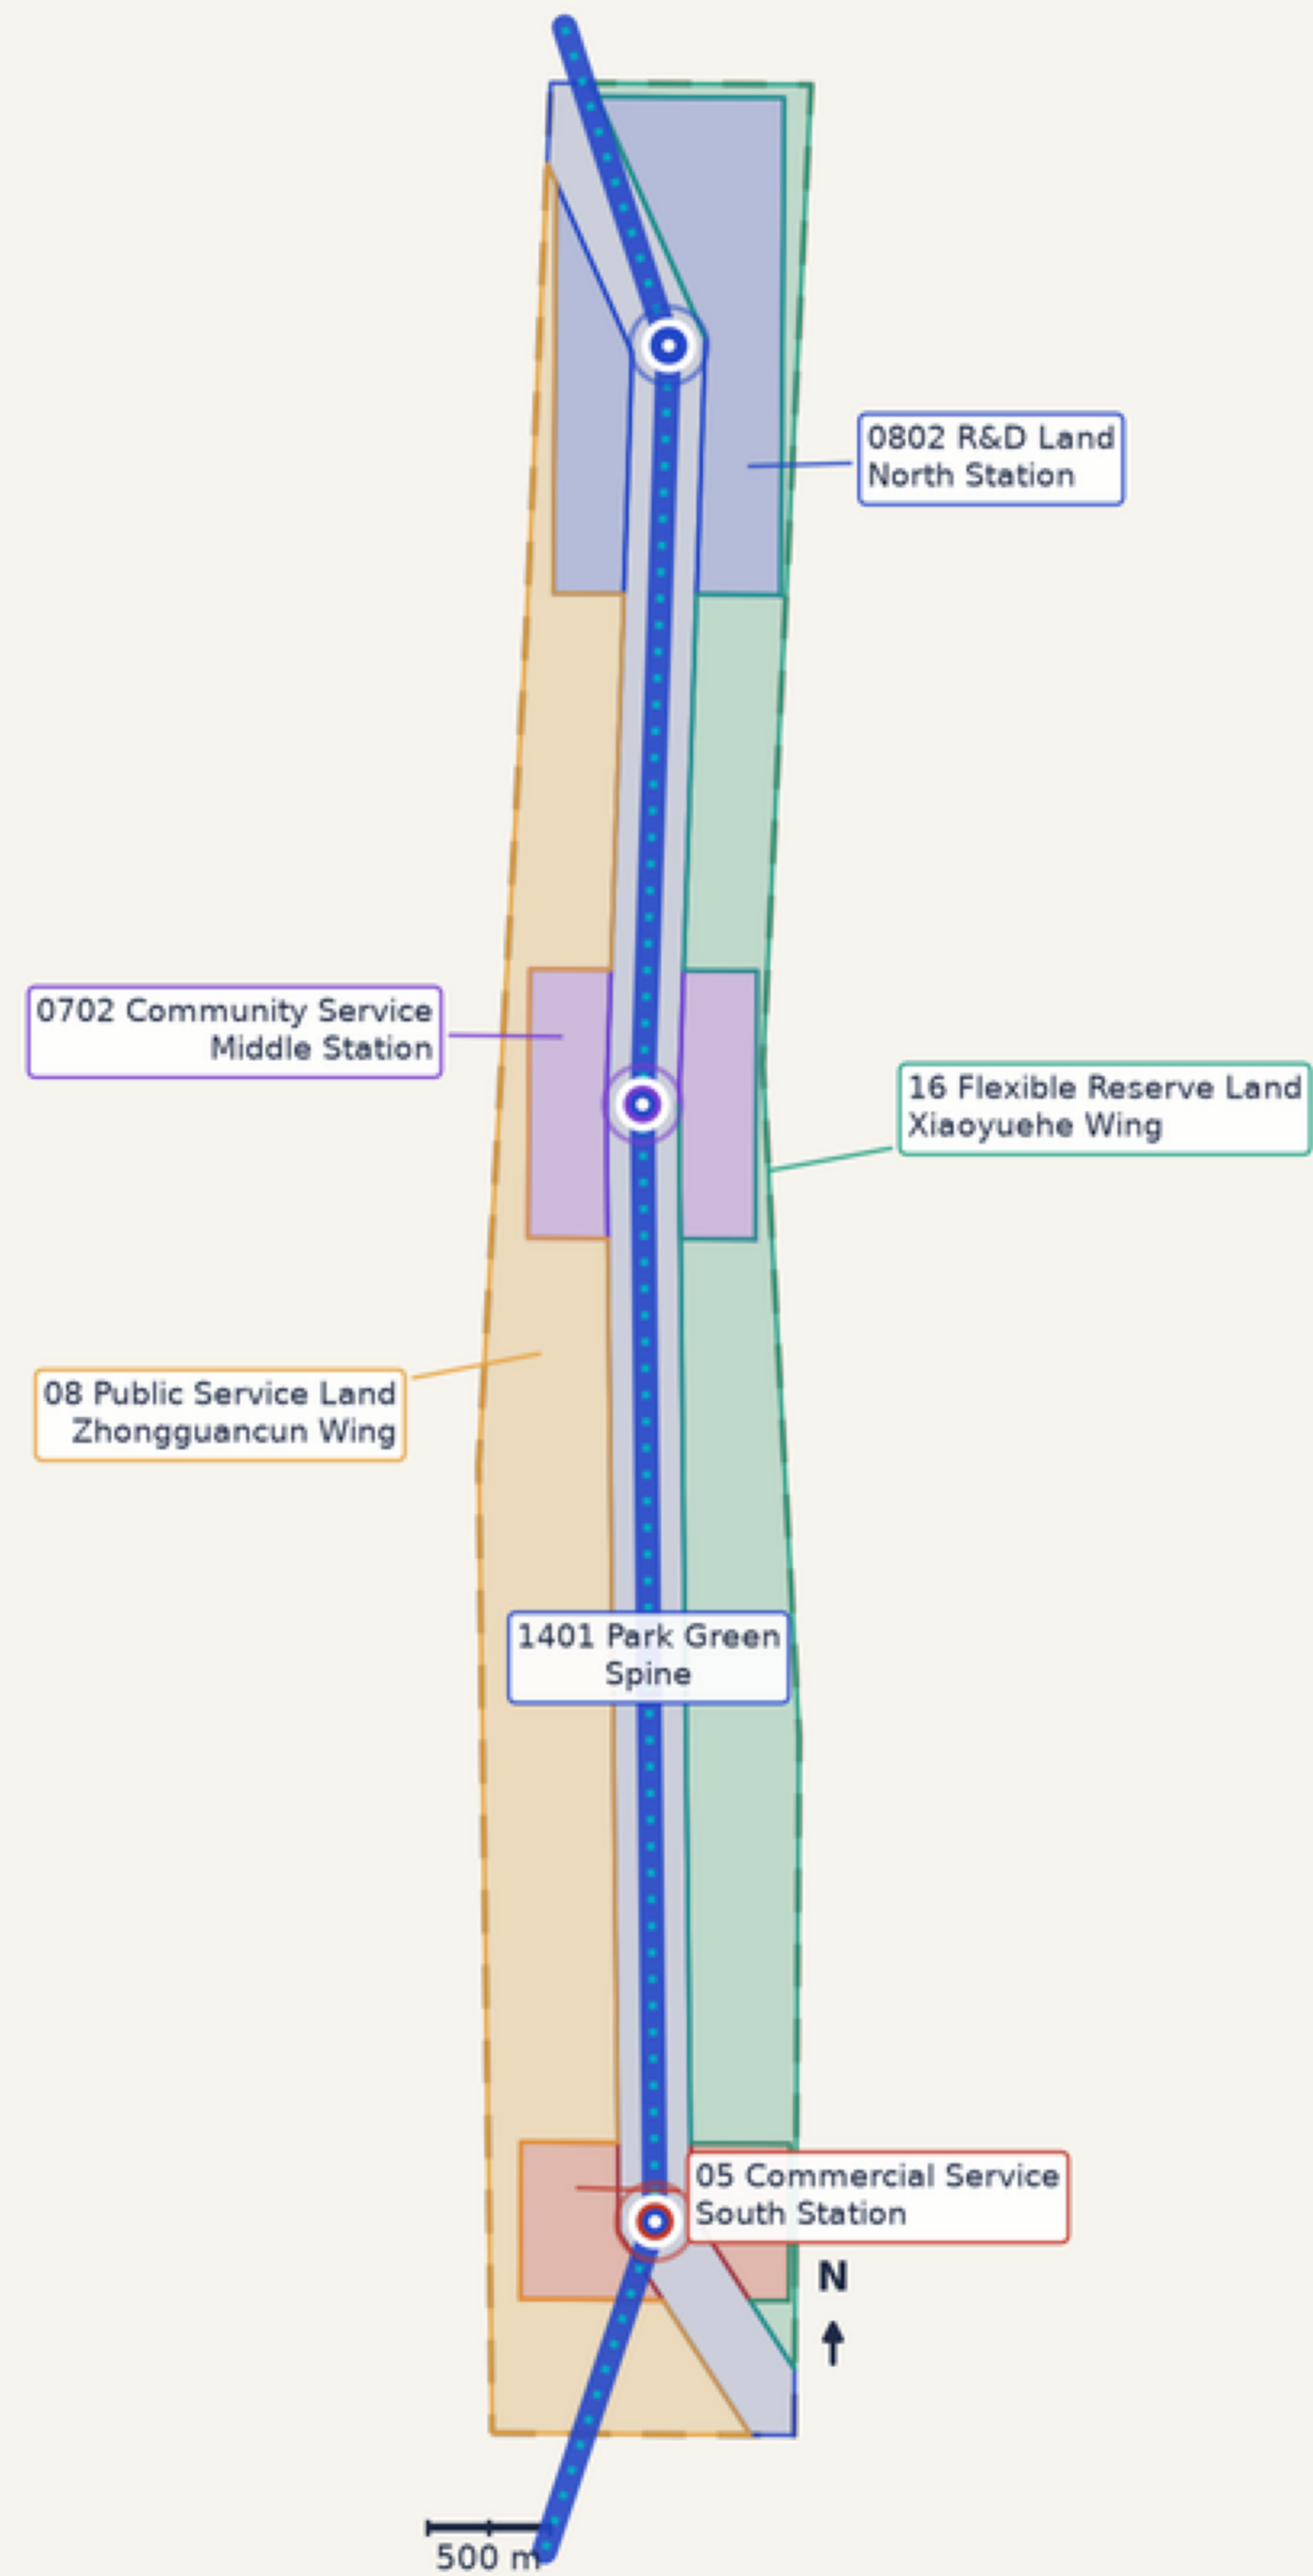

Overall Structure Board

The line: Heritage Park vitality spine, a 300m public-space corridor linking the three stations
Three stations: Zhongzhiyuan (N, Acceleration), AI Origin Community (Mid, Origin), Dazhongsi (S, Hub)
Two wings: Zhongguancun tech-service wing (W), Xiaoyuehe scenario wing (E)
Overall design area (provisional) =1,141.3 ha; recalculate once the official redline is published

JingZhang AI Line

Land-use Structure

Provisional intake boundary · 1,141 ha

Legend

- 1401 Park Green
- 0802 R&D Land
- 0702 Community Service
- 05 Commercial Service
- 08 Public Service Land
- 16 Flexible Reserve Land
- Gateway node (spine-station crossing)

Land-use zones fully cover and do not overlap the overall design boundary; the six zones follow the "one line, three stations, two wings" structure.

Six zones fully cover and do not overlap the overall design area:
1401 Park green (spine) 294.8 ha
0802 R&D land (North Station) 131.2 ha
0702 Community service (Middle Station) 71.0 ha
05 Commercial service (South Station) 50.7 ha
08 Public service land (West Wing) 347.2 ha
16 Flexible reserve land (East Wing) 246.4 ha

Building-footprint density ≈1.2%, reflecting a reserve-first, compact-build renewal direction; FAR and height await official control confirmation.

Base geometry derived from the brief/site-package provisional boundary. The overall boundary and key areas are provisional constraint, not an official redline or precise-area basis; recalculate all layers and metrics once official geometry is published.

Mobility, Transit, Slow-Traffic, Utilities

A one-line/two-connector/three-loop structure:
· The line: the spine's slow-mobility greenway
· Two connectors: west/east links to the wings
· Three loops: north-station micro-circulation, south-station four-quadrant transit link, the spine running the full length
Total road centerline length ≈15.0 km (area estimated from illustrative cross-section widths, not an official red-line)
New infrastructure: north-station edge-compute waystation, south-station data-element lounge; energy/utility conditions await official data
Accessibility and age-friendly design are hard constraints, not an add-on

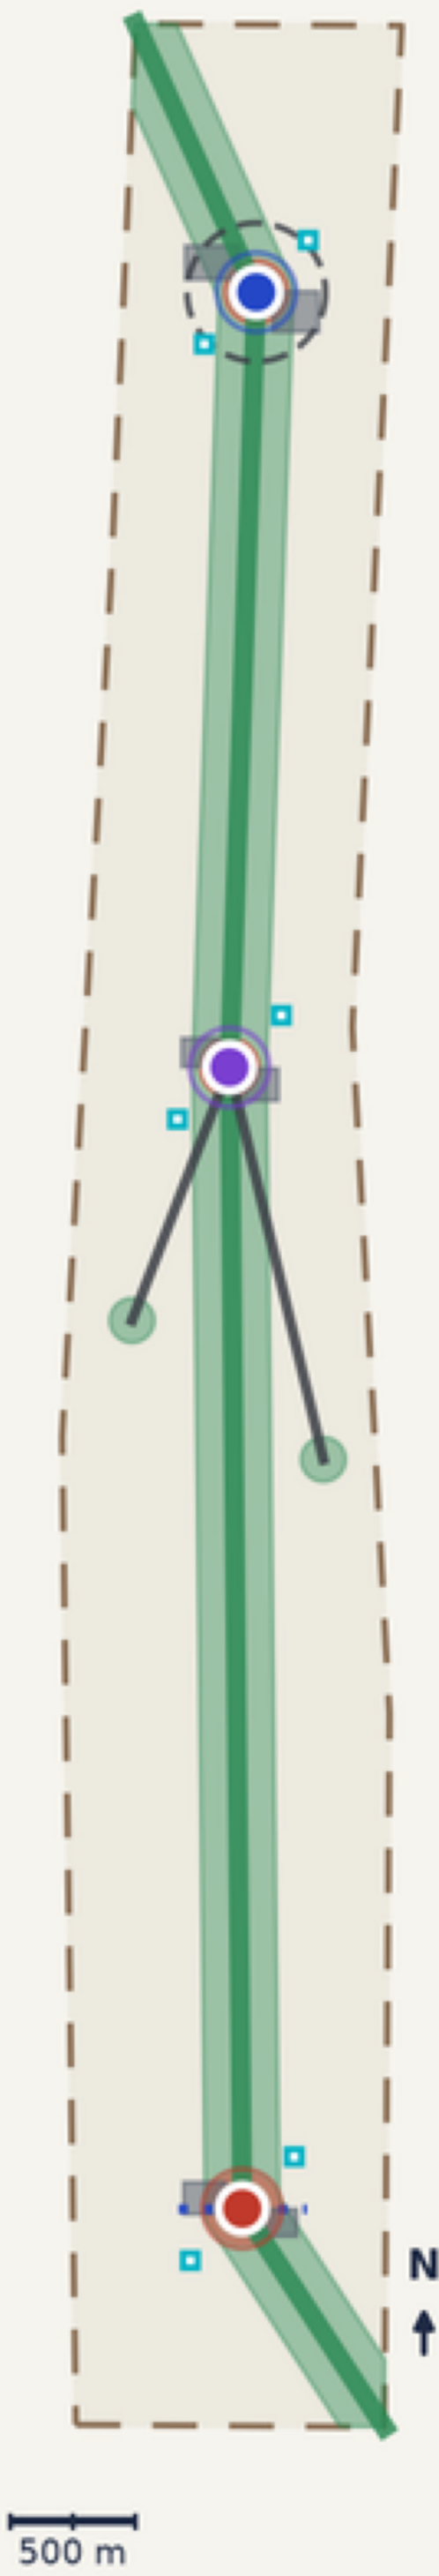

JingZhang AI Line

Mobility, Slow-Traffic and Blue-Green Public Space System

Provisional intake boundary · 1,141 ha

Legend

- Heritage-park slow-mobility greenway (the line)
- Secondary road / micro-circulation branch
- Transit-station connector
- Green space / open space
- Station-front public plaza
- Illustrative building massing
- AI scenario node (illustrative)

Base geometry derived from the brief/site-package provisional boundary. The overall boundary and key areas are provisional_constraint, not an official redline or precise-area basis; recalculate all layers and metrics once official geometry is published.

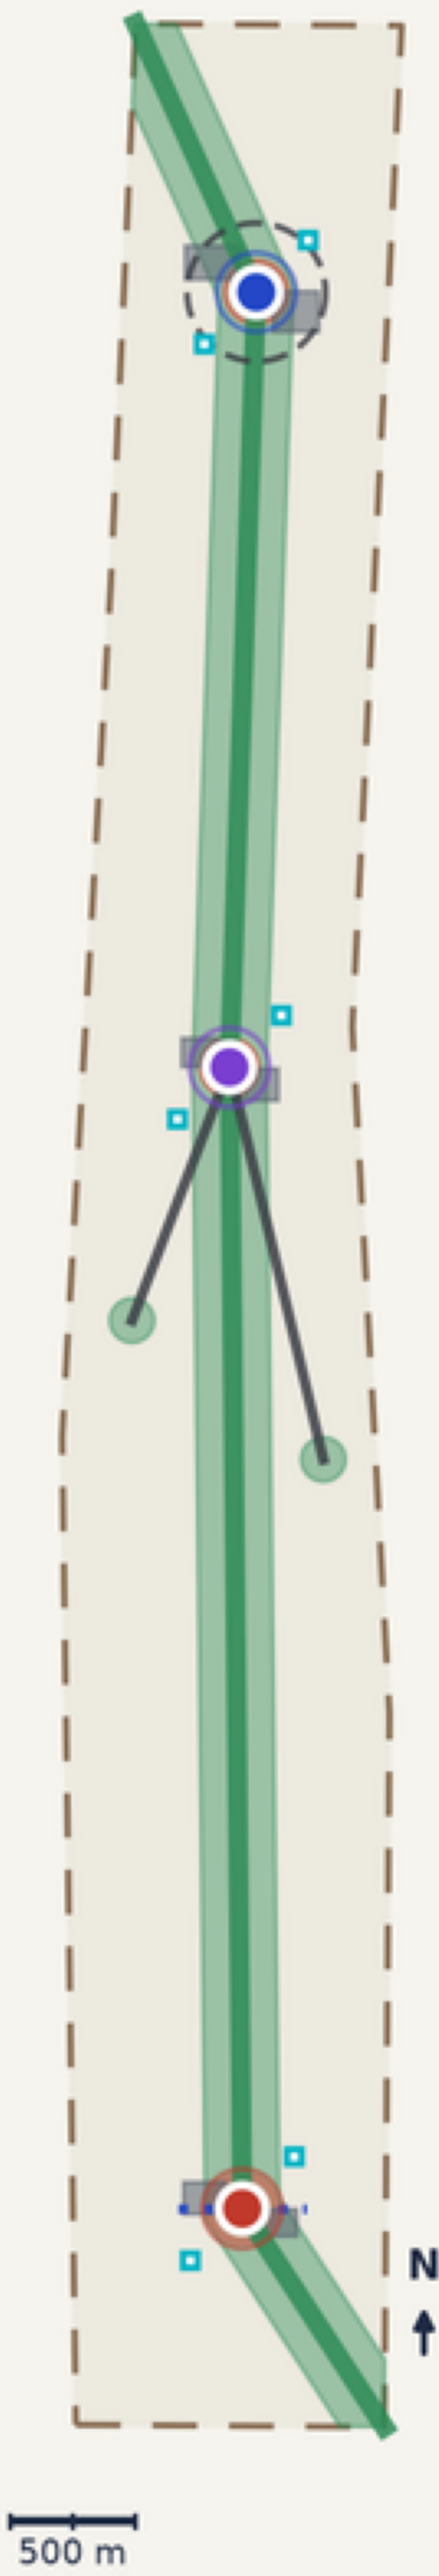

JingZhang AI Line

Mobility, Slow-Traffic and Blue-Green Public Space System

Provisional intake boundary · 1,141 ha

Legend

- Heritage-park slow-mobility greenway (the line)
- Secondary road / micro-circulation branch
- Transit-station connector
- Green space / open space
- Station-front public plaza
- Illustrative building massing
- AI scenario node (illustrative)

Base geometry derived from the brief/site-package provisional boundary. The overall boundary and key areas are provisional_constraint, not an official redline or precise-area basis; recalculate all layers and metrics once official geometry is published.

Heritage Park Vitality Belt and Blue-Green Space

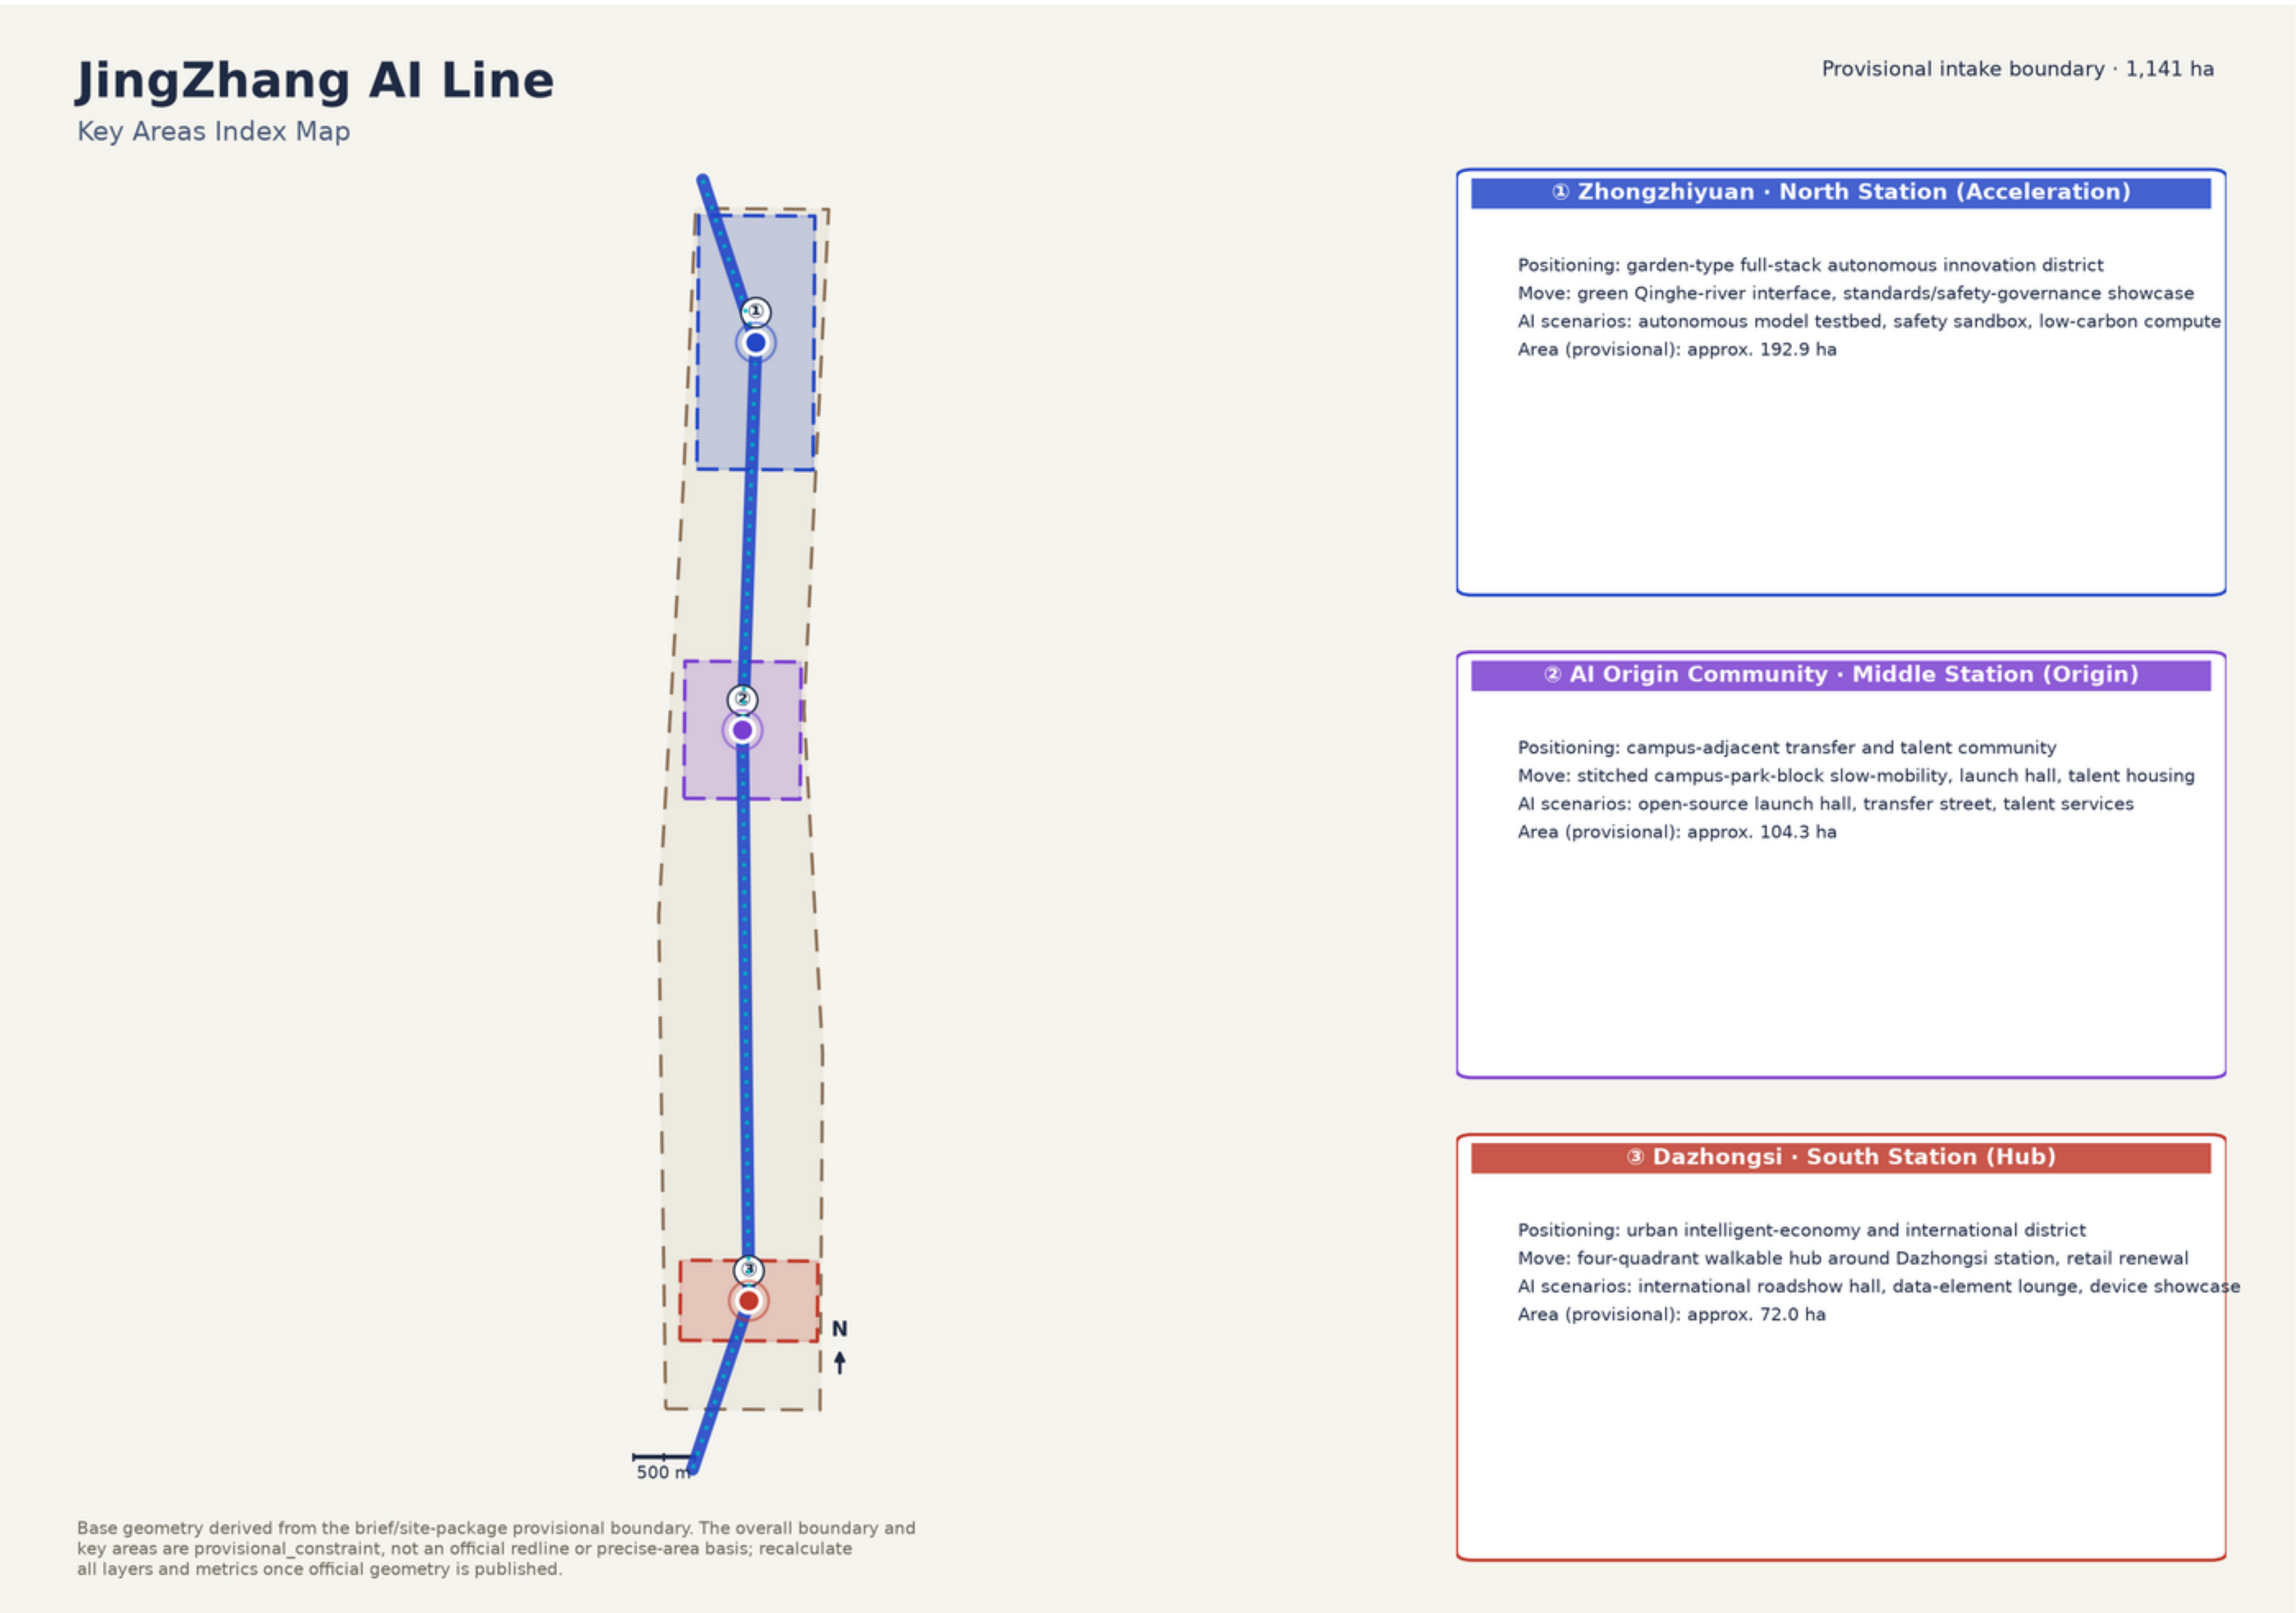

Green area ≈284.9 ha, green ratio ≈24.9%
Public space ≈16.0 ha, ratio ≈1.4%
Three station-front plazas
concentrate public vitality; two pocket parks sit in the wings
Character continues Jing-Zhang industrial-heritage materials combined with light contemporary tech-architecture interfaces
At least 3 AI pilgrimage landmarks: north-station self-reliance memorial, middle-station open-source wall, south-station international roadshow ring

Detailed Design of the Three Key Areas

① Zhongzhiyuan (North · Acceleration): garden-type full-stack innovation district, Qinghe green interface, safety sandbox

② AI Origin Community (Middle · Origin): campus-adjacent transfer community, slow-mobility stitching, open-source hall

③ Dazhongsi (South · Hub): urban intelligent-economy district, four-quadrant walkability, international roadshow hall

AI Scenarios and Implementation Operations

01 · Open-Source Launch Hall

A launch/demo space for universities, open-source communities and startups to publish results and pitch.

02 · Safety Governance Sandbox

Turns standards-setting, safety evaluation and red-teaming into a visitable, bookable, supervisable node.

03 · Edge-Compute Waystation

An illustrative new-infrastructure prototype pairing public/enterprise services with low-carbon edge compute.

04 · AI Slow-Mobility Wayfinding

Explainable wayfinding and low-intrusion sensing to spot mobility gaps and accessibility needs; aggregated data only.

05 · Dazhongsi International Roadshow Hall

A showcase/negotiation/press space for agent, device and content-consumption companies to meet international partners.

06 · Qinghe Low-Carbon Innovation Corridor

Combines green space, stormwater management, walking/cycling and AI showcases as the North Station's public living room.

07 · Campus-Adjacent Transfer Street

A street-level band of incubation, display, legal/IP and financing services supporting campus tech transfer.

08 · Data-Element Lounge

A compliant, authorized, auditable civic interface showcasing data-element and digital-asset circulation.

09 · AI Everyday-Services Demonstration Street

Brings AI+ healthcare/education/legal/daily-service scenarios down to an operable, human-reviewable block scale.

Core Metrics Recalculation and Evidence Chain

Provisional intake boundary · 1,141 ha

Land-use area by code

Base geometry derived from the brief/site-package provisional boundary. The overall boundary and key areas are provisional_constraint, not an official redline or precise-area basis; recalculate all layers and metrics once official geometry is published.

Self-check status

- PASS Deterministic validation
- PASS Spatial review
- PASS Visual packaging check
- PASS Professional evidence review

Metric-geometry-matrix-self-check evidence chain cross-verified; see sources.json / assumptions.json / self_check.json

Metrics Verification and Compliance Response

The compliance matrix covers 17 announcement clauses (1.3/1.4/1.5) and 6 agent tasks (agent.1-agent.6); full evidence chain in compliance_matrix.json.

The standard matrix covers 9 mandatory standards; the design-depth matrix covers 15 required depth items, all complete.

All four local self-check gates (deterministic validation, spatial review, visual packaging, professional evidence) PASS; see self_check.json. PASS means the package meets the baseline for content review, not that it has been approved.
