ONE SPINE / THREE ROOMS / TWO WINGS / TWELVE

VISIBLE

Status before use

ANSWER

Human acknowledgement

CONTEST

Physical and non-digital appeal

RECOVER

Human, paper, no-account path

PROVISIONAL BOUNDARY: not an official redline;
recalculate when official data arrives

Provisional boundary, not an official redline. Every spatial move is conceptual.

IN TIME JINGZHANG

1

Concept and three scope levels

One response spine, three staffed rooms, two support wings, and twelve reversible scenarios.

Three key areas

Zhongzhiyuan validates, AI Origin translates, and Dazhongsi adopts. All three boundaries are provisional.

THREE KEY AREAS

A traceable civic chain of validation, translation, and adoption

REVIEW 0.1.1

01

ZHONGZHIYUAN

Mobility and blue-green network

All alignments express conceptual connections pending road, rail, heritage, utility, and safety evidence.

MOBILITY AND BLUE-GREEN NETWORK

One response spine and six cross-links, all conceptual pending verification

REVIEW 0.1.1

- Response spine
- Walking and cycling links
- Green spine and response gardens
- Human-help point

Every gate provides visible status, rest, human contact, and a paper map. No bridge, tunnel, road-redline, or feasibility claim.

Metrics and evidence chain

Known counts, provisional calculations, and pending official metrics are kept separate.

Twelve AI scenarios

Four testing scenarios precede public deployment. Every scenario retains human, non-digital, pause, and exit paths.

ID	Scenario	Human fallback
TVS-01	Low-speed robot crossing	Observer and stop
TVS-02	Multilingual wayfinding	Human edit and static signs
TVS-03	Edge-compute energy return	Public accounting and pause
TVS-04	Public-service takeover drill	Human and paper process
SC-05	Talent-service assistant	Human desk
SC-06	Accessible heritage narration	Tactile and human guide
SC-07	Night-route companion	Human emergency contact
SC-08	Community-space booking	Phone and walk-in
SC-09	Local-shop translation	Merchant confirmation
SC-10	Environmental stewardship	Professional judgment
SC-11	Public-form explanation	Human service
SC-12	Event-flow advice	Human field control

Implementation and risk

Phase one establishes rules and reversible pilots. Phase two delivers verified cross-links, accessibility, and response rooms. Phase three develops annual programs and long-term operation. Every phase may continue, change, pause, or exit.

Pending official data: official boundaries, key-area polygons, regulatory controls, road redlines, buildings and ownership, heritage, utilities, fire, and public-facility baselines.

This work is an open co-creation recommendation. It does not replace formal planning or constitute a government decision.

AI RESPONSIBILITY LOOP | SEE TO RECOVER

Twelve scenario records share one pause, appeal, and human-return interface
