

JINGZHANG OPEN LOOP

Review revision | sources, interfaces, coordination and rights

01 OVERALL LOOP + SPATIAL STRUCTURE

1 axis · 1 loop · 3 anchors · 6 catalysts | 3 scales | 4 breaks

SPATIAL SCAFFOLD

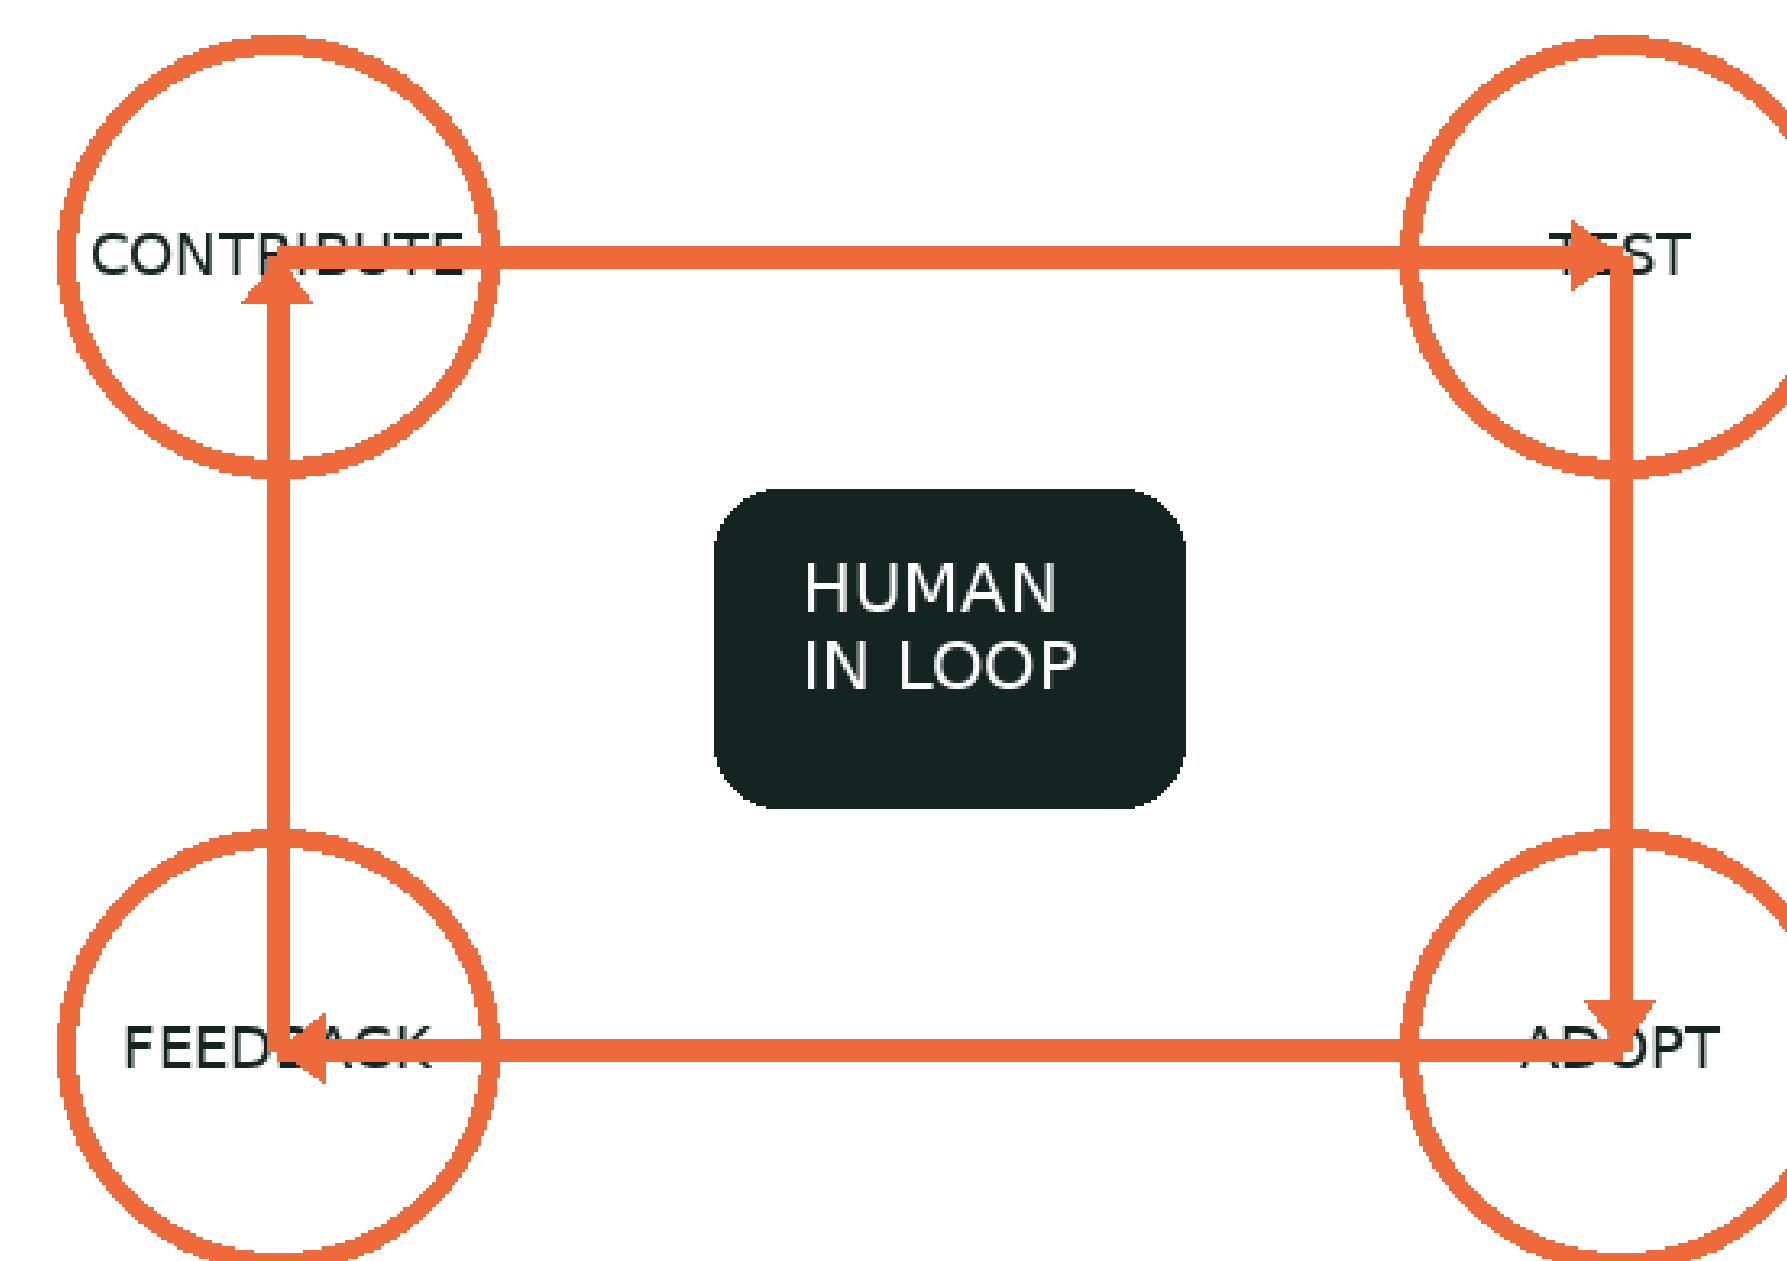

43.6 km² STRATEGIC

≈11.41 km² DESIGN

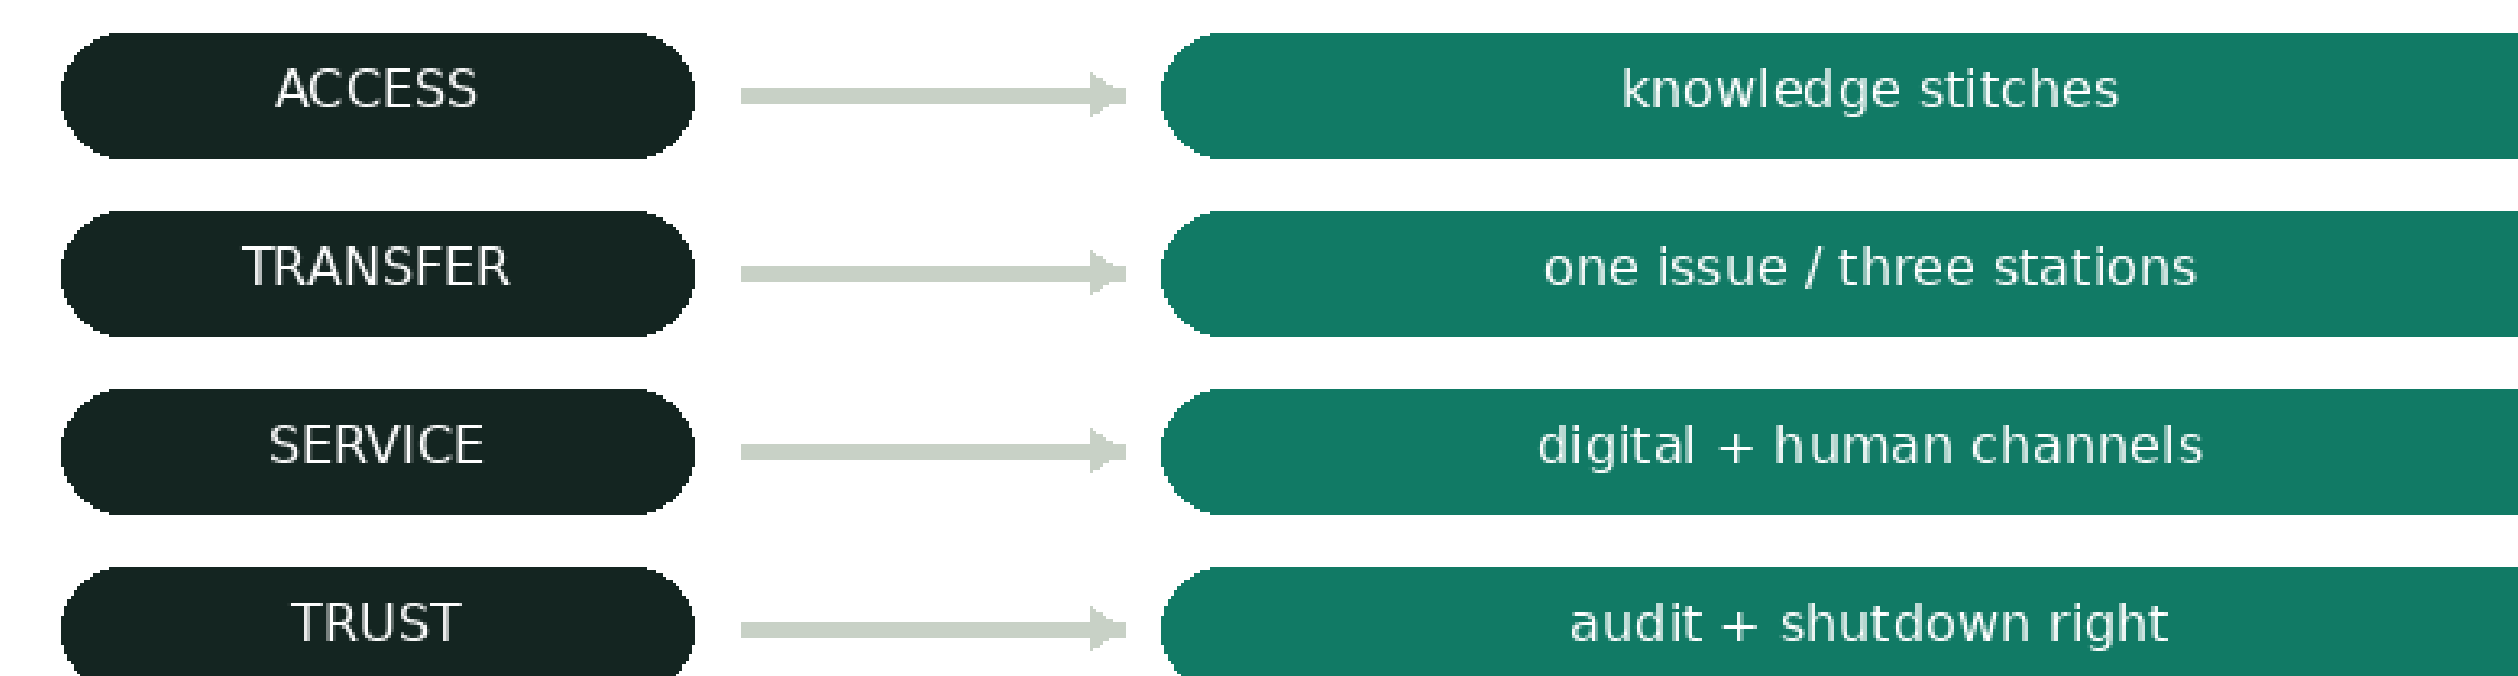

3 PROTOTYPES

CONTRIBUTION LOOP

Every cycle records: owner | evidence | reusable output | exit condition

FOUR BREAKS → SPATIAL + GOVERNANCE RESPONSE

Operating/spatial relationships only—not road redlines or a survey; all geometry is provisional.

READING GUIDE

The axis sustains public continuity; the loop closes contribution, testing, adoption and feedback; three anchors validate, transfer and launch. Three scales and four break responses

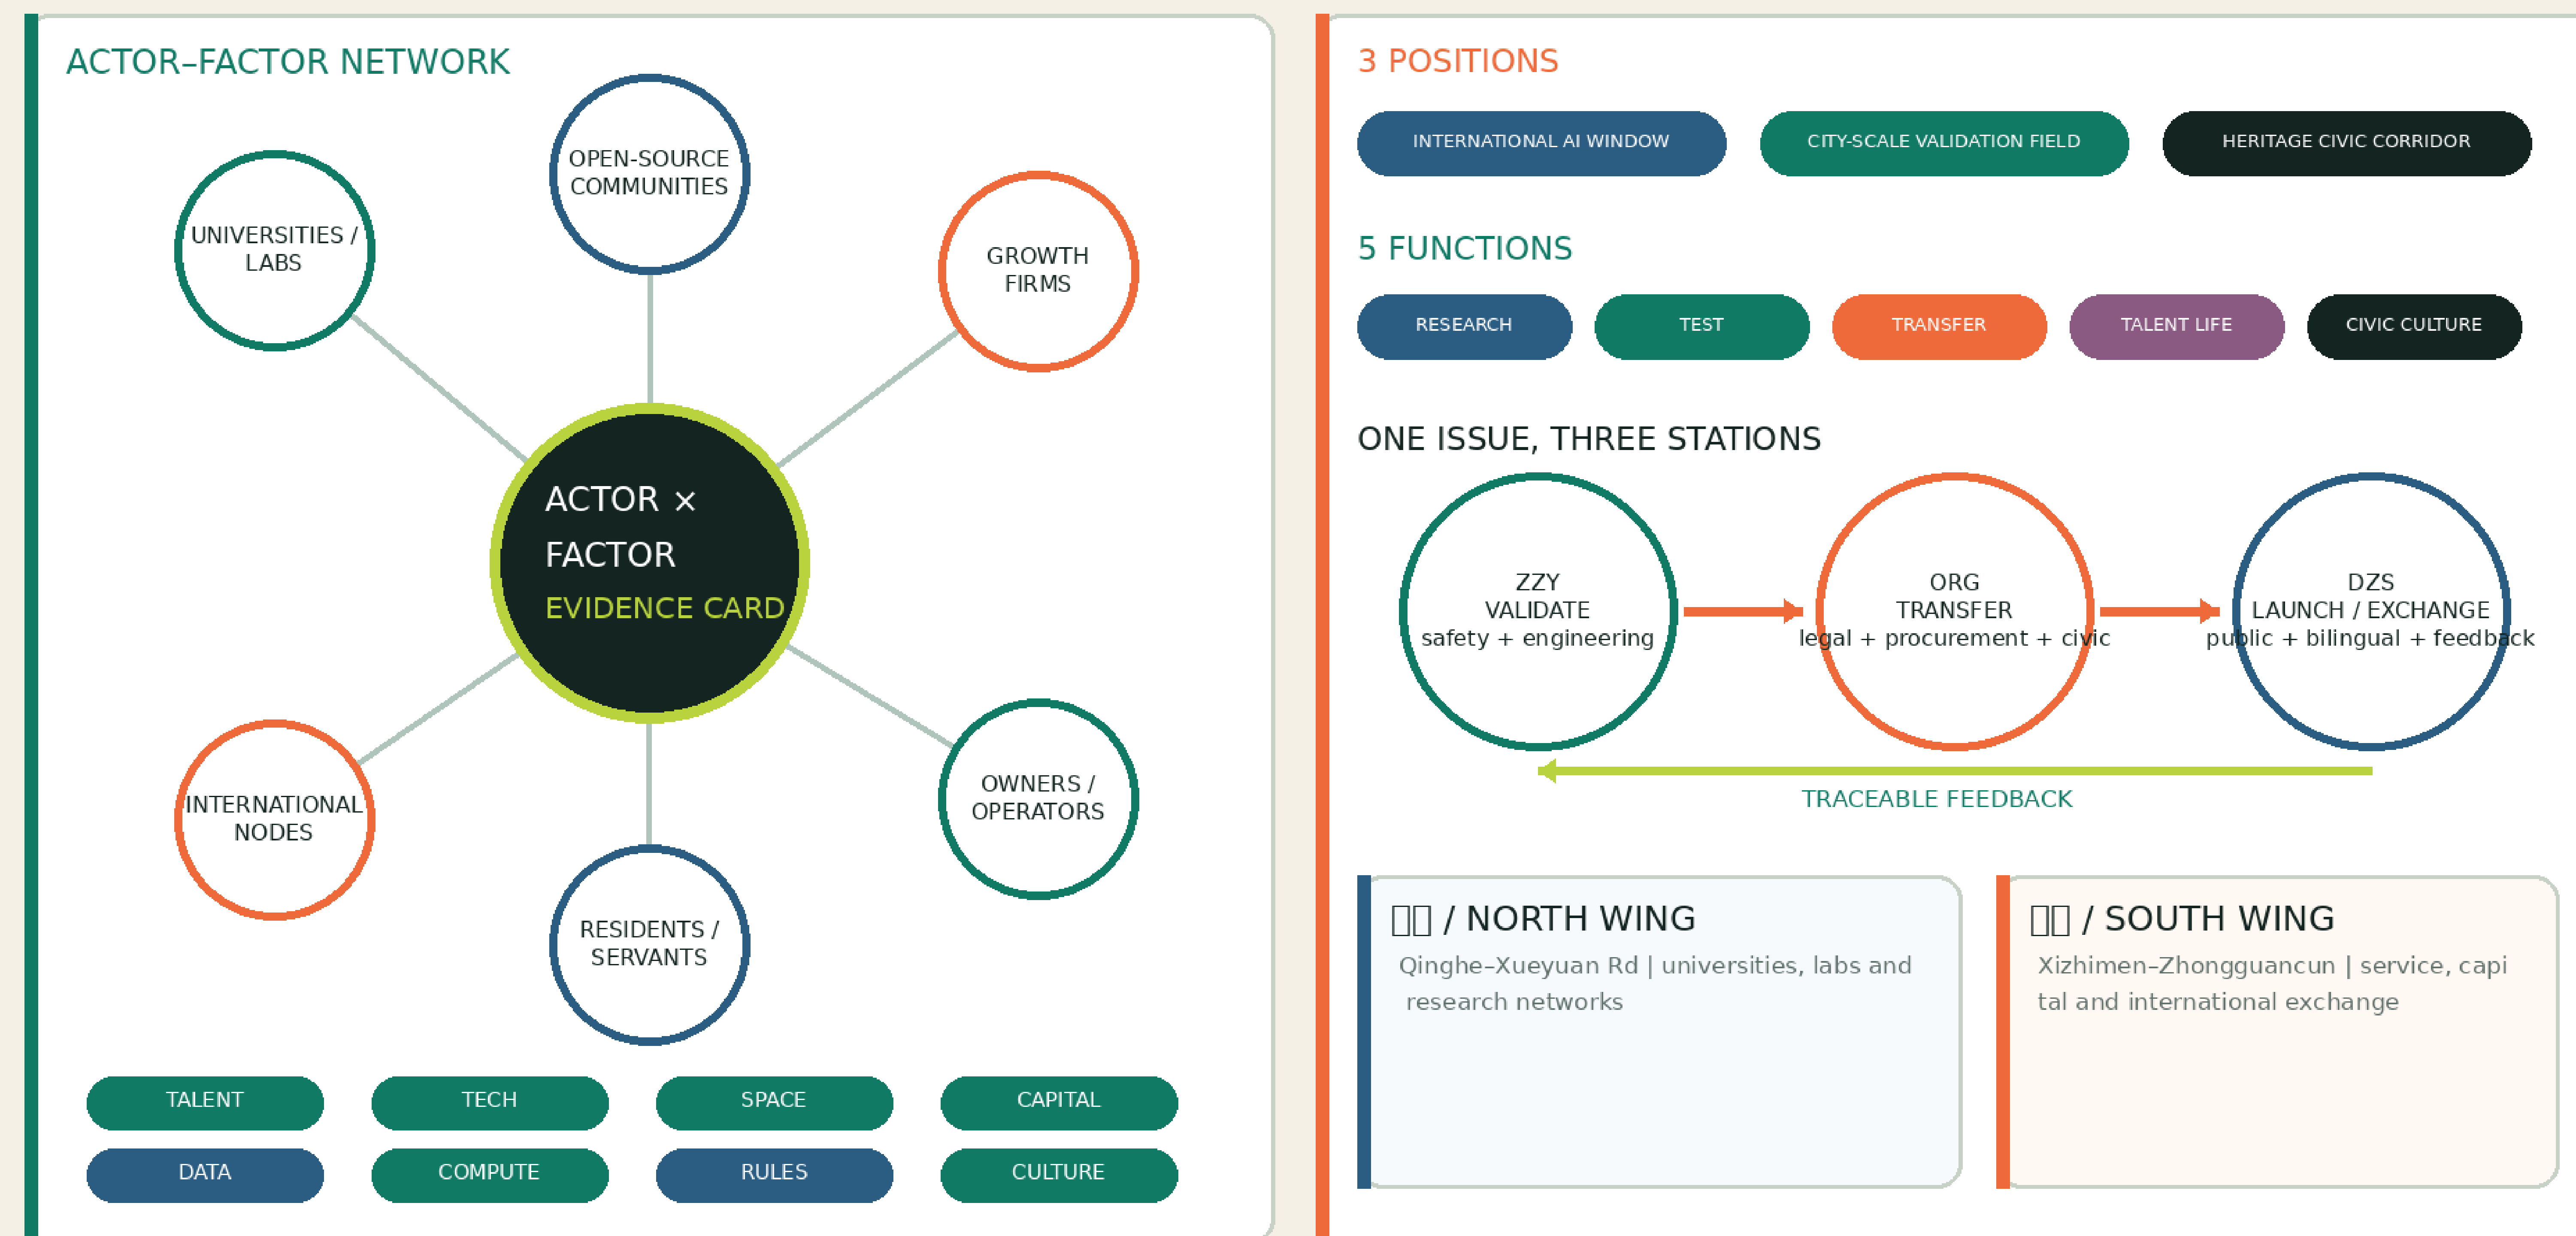

Pending: official boundaries, controls, title, roads, ridership, utilities, fire, river, heritage and capacity data.

JINGZHANG OPEN LOOP

Review revision | sources, interfaces, coordination and rights

02 ECOSYSTEM + COORDINATION STRUCTURE

6 actors · 8 factors | 3 positions · 5 functions · 3 zones + 2 wings

Admission gate: maintainer + human fallback + exit condition. Wings are collaboration directions, not construction boundaries.

READING GUIDE

Six actors meet eight factors through an admission card. One issue moves through Zhongzhiyuan, Origin and Dazhongsi for validation, transfer and

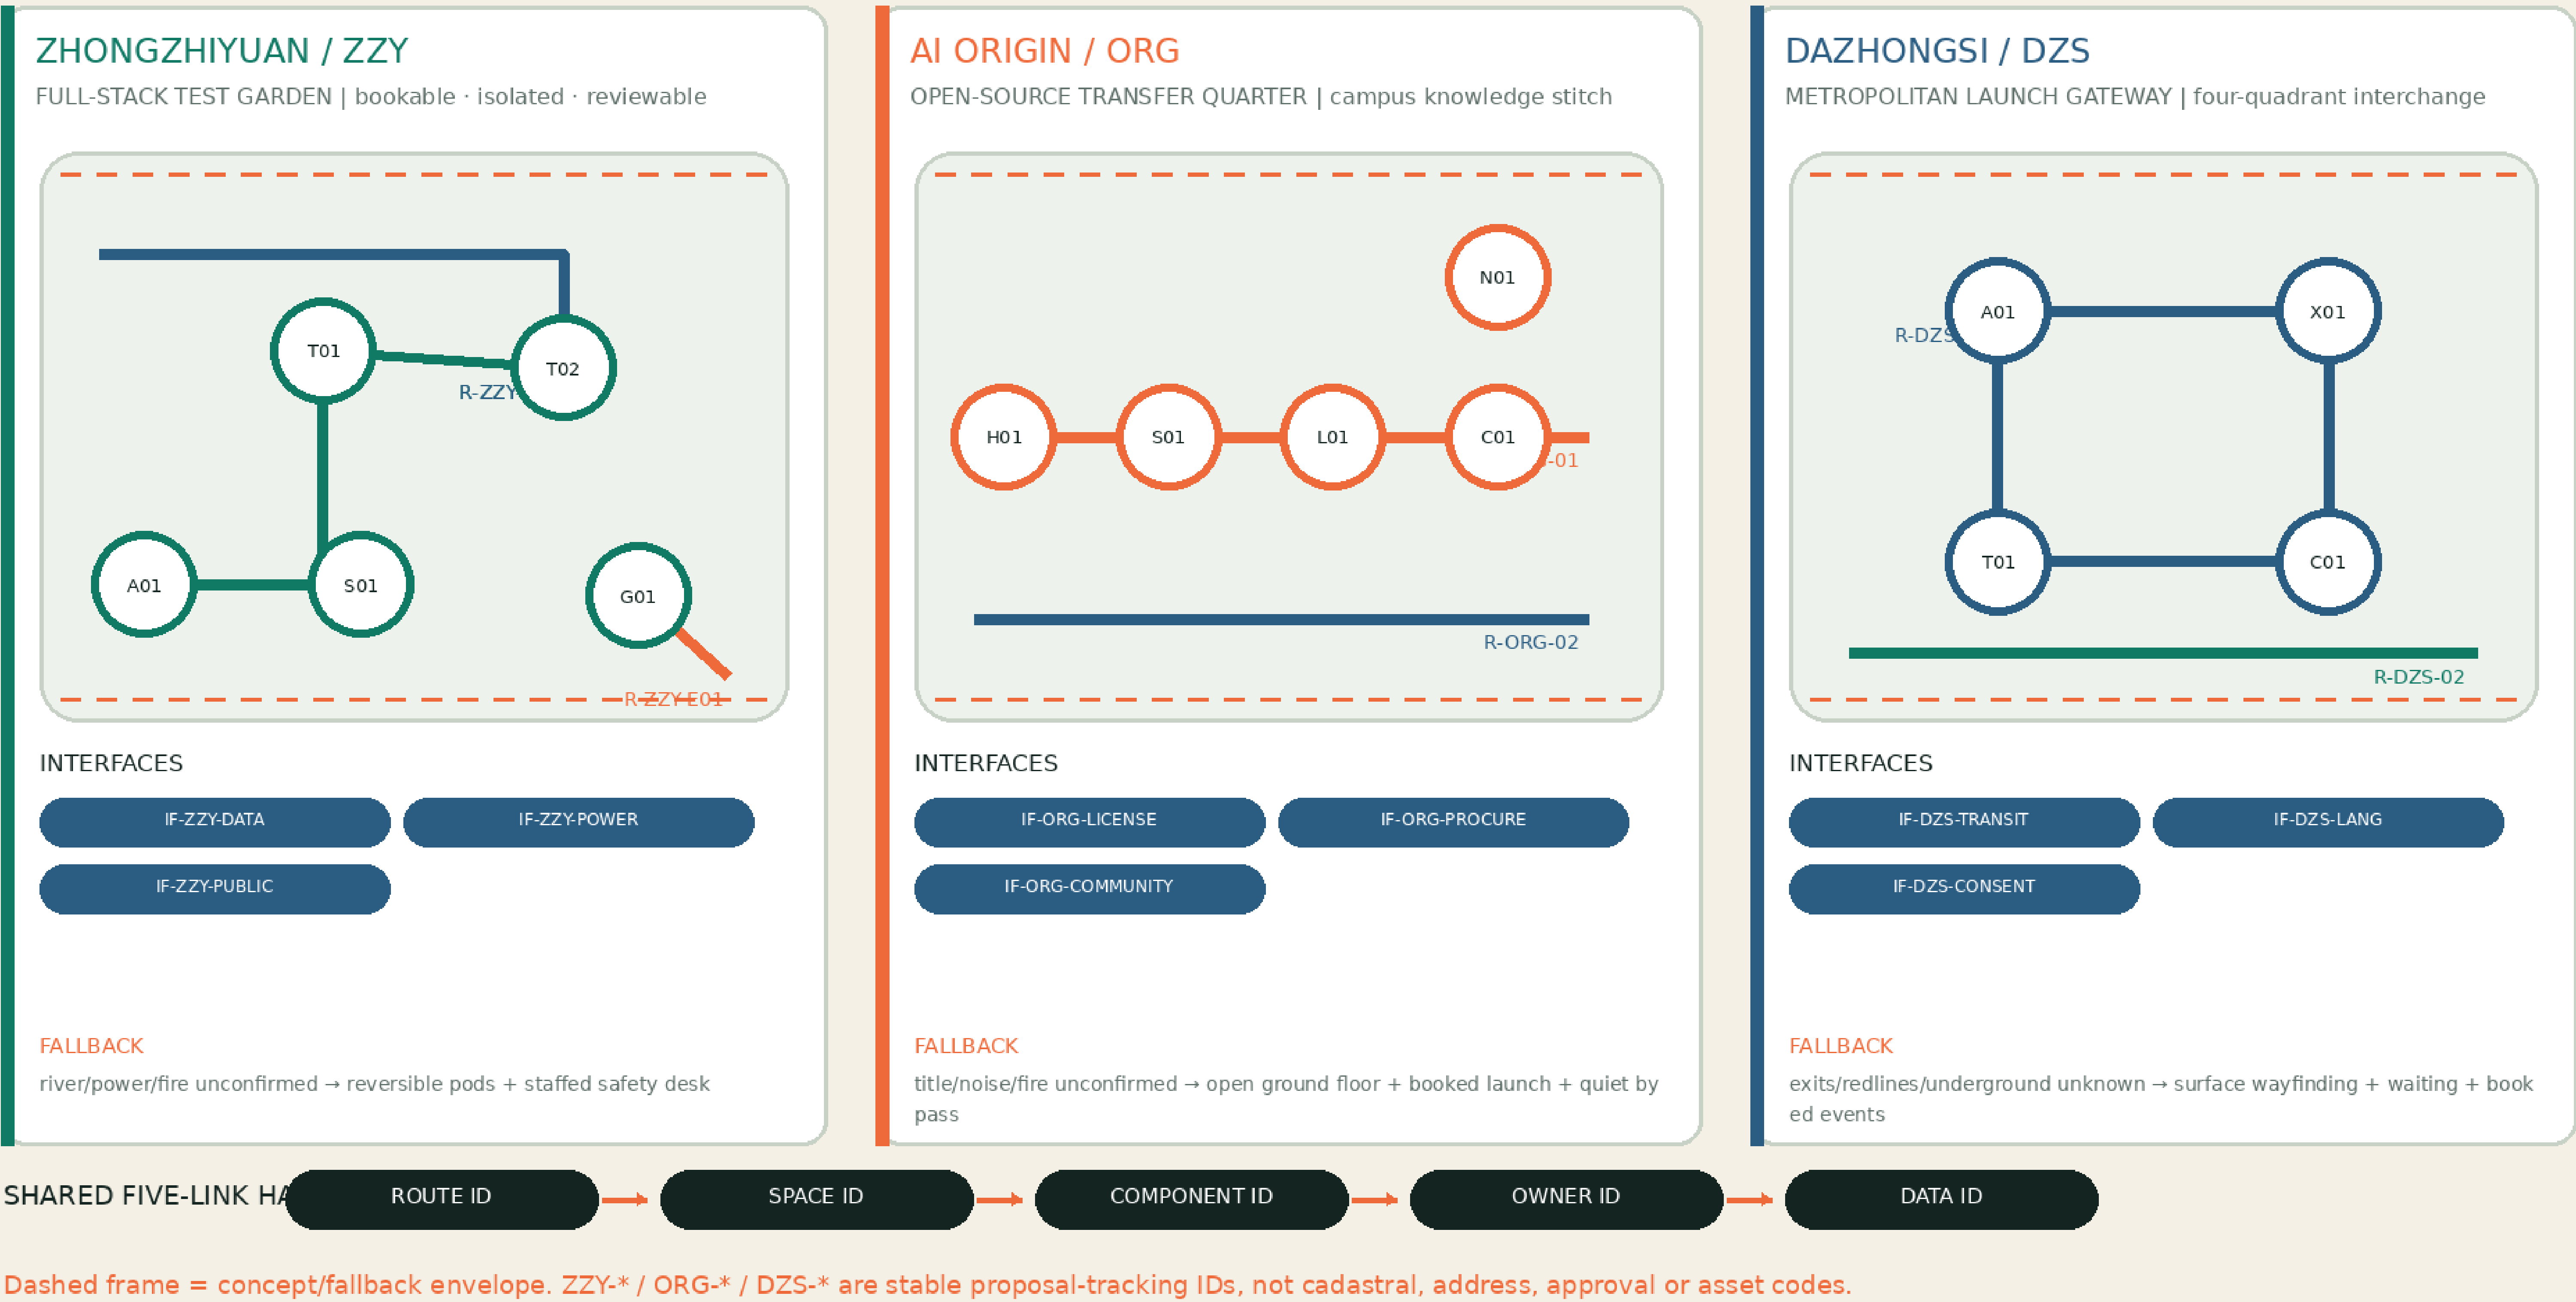

Pending: official boundaries, controls, title, roads, ridership, utilities, fire, river, heritage and capacity data.

Review revision | sources, interfaces, coordination and rights

03 THREE KEY-AREA CONCEPT PLANS

routes, interfaces, fallback boundaries + stable tracking IDs

READING GUIDE

Three concept plans show stable space IDs, separate routes, governance interfaces and fallback envelopes. The five-link handover never replaces statutory codes.

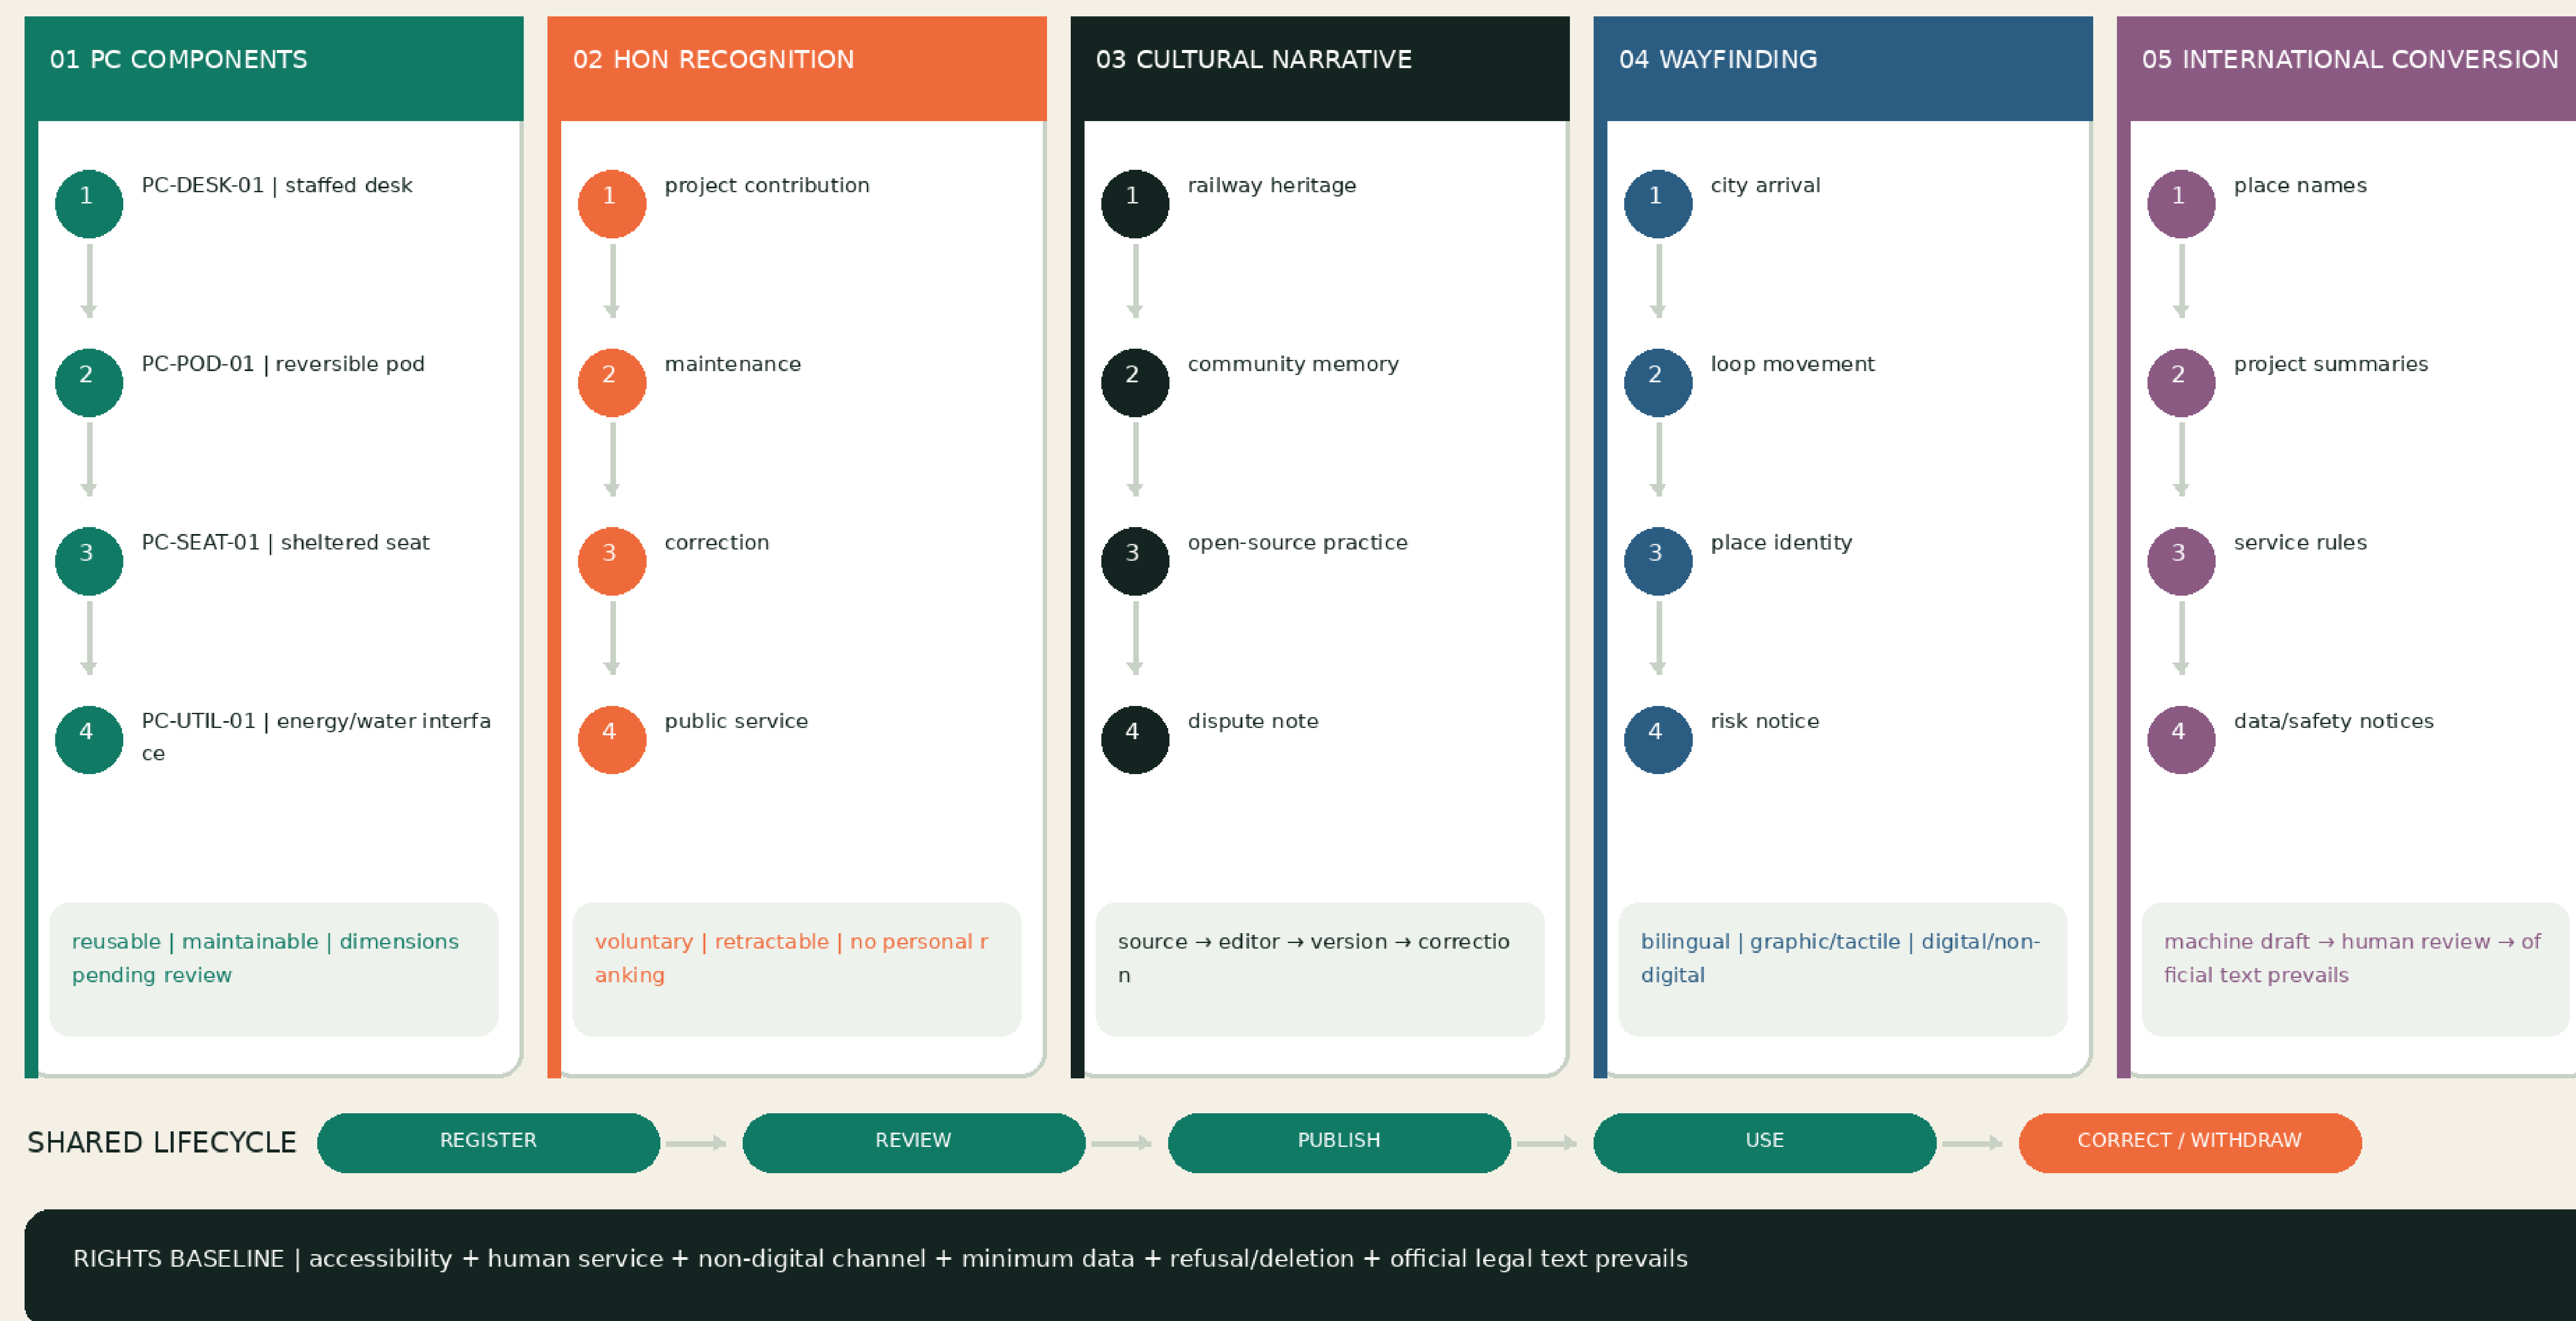

Pending: official boundaries, controls, title, roads, ridership, utilities, fire, river, heritage and capacity data.

Review revision | sources, interfaces, coordination and rights

04 PUBLIC CONVERSION SYSTEM

components · recognition · culture · wayfinding · i18n | rights baseline

READING GUIDE

Five systems share register, review, publish, use and correct/withdraw stages while retaining accessible, human and non-digital channels.

Pending: official boundaries, controls, title, roads, ridership, utilities, fire, river, heritage and capacity data.

05 SIX-CASE MECHANISM COMPARISON

observed mechanism → Jingzhang translation → not imported | traceable source IDs

CASE / SOURCE ID	OBSERVED MECHANISM	JINGZHANG TRANSLATION	NOT IMPORTED
Barcelona 22@ CASE-BARCELONA-22	industrial heritage + knowledge production + housing/public realm	productive-living-civic interfaces; ground-floor return	development intensity or contribution ratios
Kalasatama CASE-KALASATAMA	living lab with resident and firm co-testing	small agile pilots; resident review; explicit exit gate	continuous sensing by default
one-north CASE-ONE-NORTH	public coordination of research, firms, learning and amenities	differentiated anchors; shared services; international links	equivalent land or administrative powers
Strijp-S CASE-STRIJP-S	heritage, design, technology, culture and long-term operation	reversible events; operations-first heritage reuse	event footfall as civic value
MIL Montréal CASE-MIL-MONTREAL	university, community, research, arts and green space	campus-community stitches; sponge + culture base	assumed university-land relationship
Toronto Quayside CASE-QUAYSIDE-GOV	independent digital advice; privacy/use/long-term review	data-impact review; independent audit; shutdown right	technology partner replacing public decisions

COMMON FILTER | reversible first | user co-testing | public accountability | long-term operation | independent review | no unverified scale, performance, power or controls imported

READING GUIDE

Six cases are compared as observed mechanism, Jingzhang translation and not-imported item. Sources are linked and summarized; external visual assets are not

Pending: official boundaries, controls, title, roads, ridership, utilities, fire, river, heritage and capacity data.
