

RailMind Commons: An Open Urban Operating System for the C

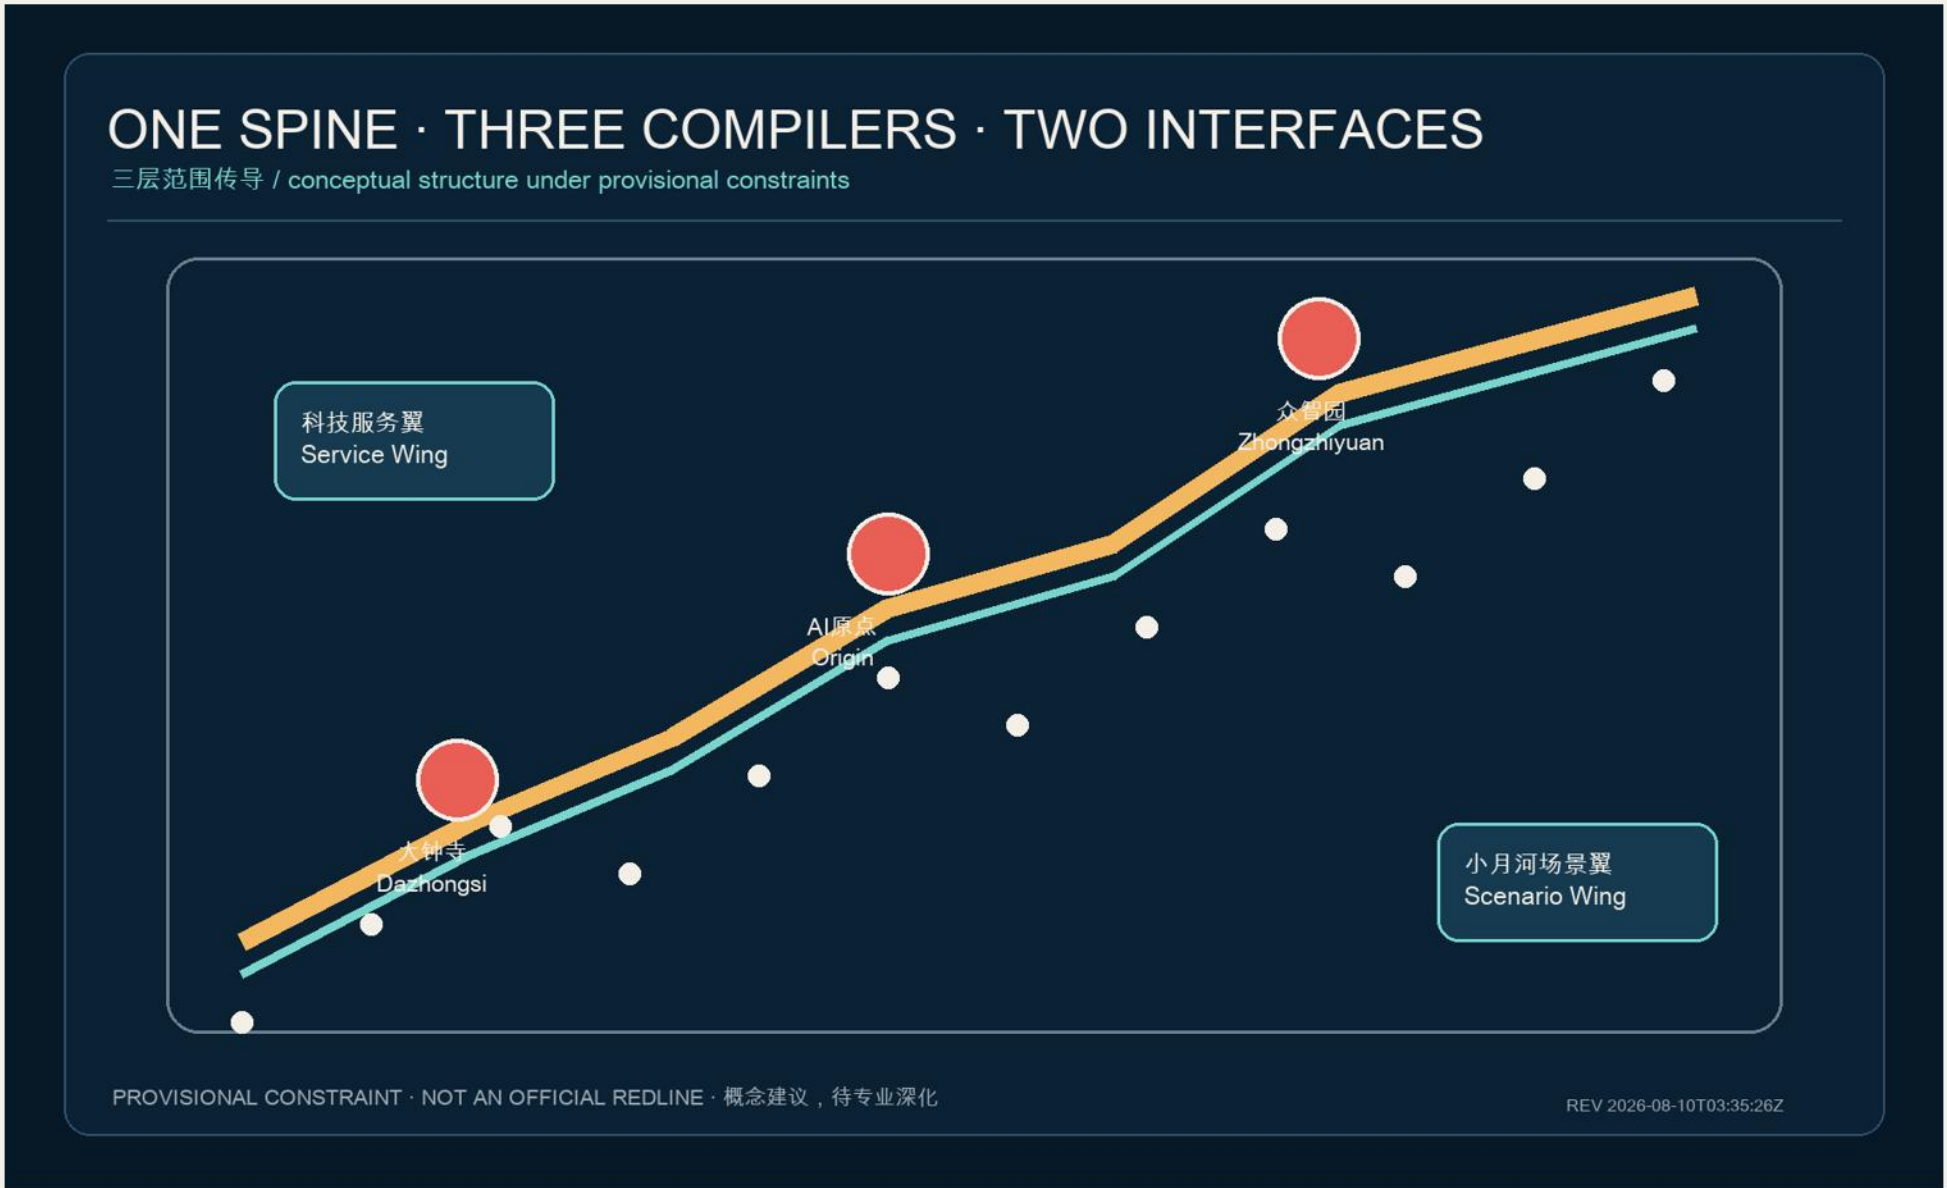

Overall concept

- Heritage as spine; open source as law; scenarios as evidence; everyday life first
- Provisional geometry is not an official redline

Three-level spatial framework

ONE SPINE · THREE COMPILERS · TWO INTERFACES

- Validate at Zhongzhiyuan, incubate at Origin, scale at Dazhongsi
- Service and scenario wings close the feedback loop

Key areas and scenarios

Ten scenarios · Five personas · Three landmarks

- Three industry-validation scenarios are bounded, time-boxed, and reversible
- Minimum data, human review, public audit

Implementation and evidence

Pilot, evaluate, then expand

- Near term: break audit, scenario protocol, movable contribution kiosks
- Values are recalculated from structured data; regulatory controls remain unknown
