

Let technology withdraw, Keep publicness in place

Connect heritage, communities, research, and convenience services through an Everyday Commons Belt;
Use recalculable gates to choose conservation, mending, or avoidance.

Continuous framework conservation	
Eliminate if any cross-connection fails	
Existing-interface mending	
$\Delta GFA \leq 0$ and $S \geq 0$ both hold	
Neighborhood-avoidance loop	
Choose when impact is non-zero and mitigation is unclosed	

Evidence gap

0/6

Cross-connections obtain formal boundary, ownership, and engineering confirmation

Geometric completeness does not equal real connectivity.

Cost side = unknown

affected_household_count

mitigation_budget_cny

duty_closure_ratio

Page 2: read space first, then the gates

The full-belt index locates three segments; the three lower plans share one extent and scale.

Shared evidence gate

0/6 connections formally confirmed

Three cost metrics = unknown

Apply fixed definitions when data arrive; do not alter gates later to preserve an alternative.

Three scope levels, nine layers, one provisional grammar

Dashed lines mark replaceable boundaries; faces, lines, transparent fills, and OSM leads remain distinct.

Coordinated research

Official approx. 43.6 km²

Industry / talent / cultural context only

Overall design

Approx. 11.4 km²

provisional basis for internal ratios
denominator

Key areas

Approx. 192.1 / 104.3 / 72.0 ha

Rough polygons locate only

9 independent legend items + OSM analysis_helper

--- SITE-001 Overall Design Area (replace)

LAND_USE conceptual land-use face

GREEN_SPACE Blue-Green Space

PUBLIC_SPACE commons belt / nodes

ROAD_CENTERLINE conceptual walking/cycling line

BUILDING relocatable conceptual footprint

PHASING conceptual phase face

PROV-KEY-001...003 key areas

CONSTRAINT cost and responsibility screening belt

OSM reference leads (analysis_helper, low confidence)

ZHONGZHIYUAN

HERITAGE GREENWAY × LOW-IMPACT TEST EDGE

~100 m CONCEPT STUDY WINDOW | boundary, dimensions, tenure and delivery remain unverified

AI-GENERATED CONCEPT SCENE | proposed spatial actions only; not a site photograph or evidence

CONCEPTUAL SPATIAL SEQUENCE — NOT A SURVEY PLAN

FOUR OPERATING STATES

BASE: greenway first

TEST: booked opening

FAIL: device off, route open

EXIT: remove rack, restore green

0–90 DAY DELIVERY PACKAGE

0–30: walk-through + flood/heritage checks

31–60: 1:1 fold-away rack mock-up

61–90: public review; remove if gate fails

REVERSIBLE KIT

shade + seating · paper wayfinding · human host · power-off/exit interface

AI ORIGIN COMMUNITY

SHARED STREET × HUMAN-HOSTED OPEN REVIEW

~100 m CONCEPT STUDY WINDOW | boundary, dimensions, tenure and delivery remain unverified

AI-GENERATED CONCEPT SCENE | proposed spatial actions only; not a site photograph or evidence

FOUR OPERATING STATES

BASE: passage + study

TEST: small co-review

FAIL: screen off, paper continues

EXIT: remove table, return street

0–90 DAY DELIVERY PACKAGE

- 0–30: resident/tenant/student walk-through
- 31–60: trial furniture + quiet hours
- 61–90: objection hearing; shrink if disruptive

REVERSIBLE KIT

mobile model table · wheelchair turning bay · quiet hours · on-site objection log

DAZHONGSI

STATION-CITY COMMONS × USEFUL WHILE OFFLINE

~100 m CONCEPT STUDY WINDOW | boundary, dimensions, tenure and delivery remain unverified

AI-GENERATED CONCEPT SCENE | proposed spatial actions only; not a site photograph or evidence

CONCEPTUAL SPATIAL SEQUENCE — NOT A SURVEY PLAN

FOUR OPERATING STATES

BASE: passage first

TEST: two-sided information

FAIL: screen off, human/paper works

EXIT: remove console, restore clear width

0–90 DAY DELIVERY PACKAGE

- 0–30: observe flow/access conflicts
- 31–60: offline console + human-service trial
- 61–90: peak review; remove if obstructive

REVERSIBLE KIT

tactile guidance · paper service rack · screen-off baseline · remove display when crowded

Locate in the upper half; read the relative section below

Plan and section are vector; labels do not rely on scaled raster text.

Window A · Plan locator (middle prototype)

Window B · Relative section at quiet residential side

Relative order only; no statutory height, dimension, or program conclusion

Responsibility closure

Impact record → mitigation / funding → human acceptance → restoration evidence → close or reopen

R1 may be tested first; R2 requires a restoration path; R3 does not start while critical data are unknown.

Continuous Framework Conservation Alternative

North segment: retained line, crossings to verify, and failure break

Selection gate Official boundary fully contains PUBLIC-001...008; all ROAD-004...009 pass.

Elimination gate If any connection fails, eliminate the entire fully continuous claim.

Current action Start with checks, markings, movable furniture, and operating tests; no physical continuity works first.

Shared reversal discipline Benefit does not offset unmitigated loss; do not start R3 while critical data are unknown.

Existing-Interface Mending Alternative

Middle segment: move public nodes to verified existing entrances

Selection gate $\Delta GFA \leq 0$ and $S \geq 0$; lawful retained usable ground floors can host services.

Elimination gate $S < 0$; or $\Delta GFA > 0$ and $R_{\text{new}} > R_{\text{existing}}$.

Current action Conceptual buildings retain relocatable templates only; entrances, ownership, fire safety, and access agreements await sign-off.

Shared reversal discipline Benefit does not offset unmitigated loss; do not start R3 while critical data are unknown.

Neighborhood-Avoidance Loop Alternative

South segment: impacted interface, paused segment, detour, and relocated node

Selection gate A proposed interface affects ≥ 1 household and funding or acceptance is unclosed.

Elimination gate All impacts are 0; or every non-zero impact has action, funding, and acceptance responsibility.

Current action R1 only: pause, detour, time-share, removable guidance and events; no excavation, demolition/building, or permanent barrier first.

Shared reversal discipline Benefit does not offset unmitigated loss; do not start R3 while critical data are unknown.

PROBE Relay: annual programs form a handover chain, not an unconfirmed schedule

Each stage shows status, Human Review, impact, and restoration evidence.

OP-01

Open Brief Season

Public brief / rights and risk boundaries

PROPOSED

Operator / date / funding = unknown

OP-02

Model Mile Trials

Small test card / failure record / Human Review

PROPOSED

Operator / date / funding = unknown

OP-03

Commons Value Week

Daily services / accessibility / impact ledger

PROPOSED

Operator / date / funding = unknown

OP-04

PROBE Release & Relay

Reusable outputs / corrections / next problem pool

PROPOSED

Operator / date / funding = unknown

Scenario-access state machine

CONCEPT → EVIDENCE_READY → SANDBOX → LIMITED_PILOT → PUBLIC_REVIEW → MAINTAIN / RETIRE

Every state change requires site / operator / data rights / safety / privacy / accessibility / human decision / exit responsibility together.

developer_to_pilot_conversion_ratio = unknown; do not fill without one cohort, eligibility, approvals, and observation window.

Recalculable does not mean real: read boundaries, ratios, and responsibility separately

Narrative shows evidence precision; machine digits appear here for audit comparison.

Proposal green-space coverage

Approx. 0.11

Proposal Public Space coverage

Approx. 0.03

provisional denominator

Approx. 11.4 km²

Boundary perturbation scan (machine-recalculation appendix)

Perturbation	Substitute-boundary area	green_ratio	Relative change
-200 m	7.218 km²	0.168393	+57.8%
-50 m	10.334 km²	0.117829	+10.4%
Baseline	11.413 km²	0.106694	+0.0%
+50 m	12.509 km²	0.097342	-8.8%
+200 m	15.892 km²	0.076620	-28.2%

Within ±50 m both numerators remain fixed; at -200 m both are slightly clipped, so relative changes are close but not identical.

High-impact inputs still missing

affected_household_count = unknown

mitigation_budget_cny = unknown

duty_closure_ratio = unknown

floor_area_ratio / building_height_m = unknown

statutory_green_ratio / setback_m = unknown
