

WAKE THE CORRIDOR

京张醒楼

The park is open — now wake the buildings

Centennial Jingzhang AI Innovation Belt open call · formal submission · Edmunds · v1.0

≈100万m²

reported renewable space

9 km

built heritage-park interface

3

wake modes × key areas

6

state loop: register→debrief

Open co-creation suggestion · provisional rough boundary · not an official redline, approval basis, or approved conclusion

Overall concept: one ledger, one line, three yards, many points

总体概念图：一账、一线、三场、多点

The six-state wake loop · 醒楼六态循环

AI: retrieve, match, simulate, summarize. Humans: tenure, safety, approval, public interest.

Four ledger asset classes · 台账四类空间

One line: the built 9 km heritage park is the ledger's public interface (opened 2026-08-06).

Awakened spaces are displayed (Space Depot), lit (Lights-On Terrace), and commemorated (Wake Milestones) along it.

Three-level scopes and concept land-use structure

三层范围与概念用地结构

京张醒楼 / WAKE THE CORRIDOR

FIG 02

Coordinated research area $\approx 43.6 \text{ km}^2$

Rules layer: ledger rules, regional data standard

Overall design area $\approx 11.4 \text{ km}^2$

Ledger layer: full concept zoning, stitching, interfaces

Key areas $\approx 368.4 \text{ ha}$

Pilot layer: three wake modes $\rightarrow$ replicable playbooks

Provisional boundaries: once official polygons arrive, all nine layers, every metric, five figures, both drawing sets, and both HTML deliverables are recomputed.

Concept land-use roles (18 seamless cells, recomputed in EPSG:4548) — not statutory land-use adjustments.

Three key areas × three wake modes

三处重点区 × 三种唤醒模式

京张醒楼 / WAKE THE CORRIDOR

FIG 03

Dazhongsi AI Cluster ≈ 72 ha

整楼唤醒 WHOLE-BUILDING WAKE

Local proof

Zhongkun Plaza: 70% vacancy → tech offices +
Dazhongsi 1733 (~15y case-by-case)

Spatial anchor

Twin entries: Metro L13 + 3rd-Ring terrace; demo
building walks the six-state loop

Scenarios

AI-native retail / building check-up TEST /
Lights-On honor wall

AI Origin Community ≈ 104.3 ha

院墙唤醒 COURTYARD WAKE

Local proof

Petroleum Compound: ~8,000 sqm shared space in a
multi-owner compound; 768 Park preserve-first

Spatial anchor

Fabric untouched: corners into ledger, part-time
ground floors, Wudaokou developer plaza

Scenarios

Cross-campus study rooms / night study / open
research boards

Zhongzhiyuan Acceleration ≈ 192.1 ha

快装唤醒 QUICK-FIT WAKE

Benchmark

Mosu Space: 13k sqm shell → move-in in 38 days; 300+
firm ecosystem

Spatial anchor

Quick-fit pilot shed (high bay, heavy load) + open
test yard + reserved cell

Scenarios

Embodied-robot pilots TEST / low-speed delivery TEST
/ factor-policy interface

All three polygons are provisional; everything above is directional concept design pending tenure, structural, fire, and regulatory confirmation.

Slow mobility and blue–green public space composite

交通慢行与蓝绿公共空间复合系统

京张醒楼 / WAKE THE CORRIDOR

FIG 04

Relay, not redraw: the 9 km park and its slow lanes are built; design effort goes to interfaces, stitching, and wake points.

Spine $\approx$ 9,605 m $\cdot$ 7 stitch links $\cdot$ 8 wake points $\cdot$ green ratio $\approx$ 23.3% (all recomputed from geometry)

Three interface principles · 绿廊界面三原则

Open ground floors

Awakened ground floors open to the park

Compound stitching

Compound greens connect to the corridor

Roofed living rooms

Bridge shadows become roofed public space

Three AI pilgrimage landmarks (all regenerated from stock — no new towers)

空间车站 THE SPACE DEPOT

A live city–ledger wall beneath the welded–rail gantry crane

灯亮阳台 LIGHTS-ON TERRACE

One lamp per awakened space; contributors (incl. AI) engraved

醒楼里程碑 WAKE MILESTONES

Kilometre markers along the spine, doubling as wayfinding

Concept land-use composition (EPSG:4548)

Key numbers

11.41 km ²	Submitted boundary area (provisional)
9,605 m	Slow spine length
23.3%	Green ratio (park-backed)
8 + 7	Wake points + stitch links
100万m ²	Reported renewable space (low-confidence context)
pending	FAR/height/density (pending controls)

Evidence chain: sources → layers → metrics → matrices → self-check

Mechanism metrics (proposed open dashboard): registered area · area in trial · awakened area · demand-to-keys days · vacancy-to-program days · trial exit rate

Reported figures are context only, replaced once the verified ledger exists; statutory indicators await official controls.

Identity: the lit window → a city progress bar

Mechanism summary

One ledger: an open inventory of underused space (buildings, compound corners, under-bridge grey, basement slack), turning the base ledger required by the trial Implementation Measures into an open, AI-readable, matchable, exit-friendly urban system.

One line: the built 9 km heritage park as the ledger's public interface: the Space Depot, the Lights-On Terrace, the Wake Milestones.

Three yards: whole-building wake at Dazhongsi, courtyard wake at AI Origin, quick-fit wake at Zhongzhiyuan; many points: eight micro wake points.

Six-state loop: register → diagnose → match → reversible trial → confirm/exit → debrief. AI only retrieves, matches, simulates, and summarizes; humans decide tenure, safety, approval, and public interest.

All spatial statements are concept suggestions; the package is recomputed once official polygons replace the provisional boundary. See [proposal.md](#), [metrics.json](#), [sources.json](#), and the three matrices.
